THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Brocadilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

YATES'S MARBLE WHARF, Crescent-road, Millbank.—M. YATES begs to inform the friends of her late husband, W. Yates, and all persons connected with the Marble trade, that the business of the above premises will be carried on as usual under the superintendence of an able manager. A large quantity of Marble Slab; also a good stock of Chimney-pieces, and other marble works

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, Kings-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest price.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS, MILLBANK STREET, WESTMINSTER. Marble of all kinds and of best quality, in block and slab Marble mortars, &c.

YORKSHIRE STONE.
GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms
GEO. VINT and BROTHERS will gladly forward prices by post on application.—Address, Idle, near Leeds.

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter.—London Agent, C. HOAR, 4, Mill-bank-row, Westminster. This Granite was used exclusively in the Nelson Monument, Trafalgar-square; King William IV. Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLAS and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 240, High-street, Southwark, near the Town-hall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Lard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

RANSOME'S SILICEOUS STONE.

THE PATENT SILICEOUS STONE COMPANY are prepared to execute Contracts for the supply of all kinds of Ornamental Details for Buildings, &c., manufactured in this beautiful material, which has received the approval of eminent architects and scientific men, and which, for sharpness of outline, durability, and effect, stands unrivalled. It is especially applicable for the elaborate details of Mediæval and Ecclesiastical Architecture; for Gothic Windows, Doorways, Pinnacles, &c.; Crosses, Corbels, Altar-Screens, Pulpits, Fonts, Monumental Tombs, Tablets, Headstones, &c. Also, for all kinds of Garden Decorations, Fountains, Figures, Vases, and Pedestals; Flower Boxes, Wardean Cases; Balustrades for Trellis Walks; Gate Piers, Caps and Bases, &c. &c. And for Casts of Royal Arms, Chimney-Pieces, Brackets and Trusses, Ashlars, Quoins, String Courses, and other Dressings. Further particulars, with illustrations, on application to Mr. EDWARD MEADHAM, Secretary, at the Company's offices, Whitehall Wharf, Cannon-row, Westminster; or to Mr. FREDERICK RANSOME, Patent Stone Works, Ipswich.

	3	3½	4	4½	5 inches.			
	2s.	2s. 3d.	2s. 6d.	2s. 9d.	3s per yard.			

No. 6. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

1	1¼	1½	2	2½ inches.
9d.	11d.	1s.	1s. 3d.	1s. 6d. per yard.

The hose is Burnettized at an extra charge of 3d. per yard. Union Joints Branch Pipes, and Jets, are also supplied

TRELOAR'S COCOA-NUT FIBRE MANUFACTURES, consisting of Matting, Mats, Matresses, Brushes, Nettings, &c. are distinguished for superiority and excellency of workmanship, combined with moderate prices. Prize medal both in England and America, at the Exhibition of all Nations.—T. TRELOAR, Cocoa-nut Fibre Manufacturer, 42, Ludgate hill, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

Office of "The Builder," and of all Booksellers.

In the press, and will be published in October, price 5s.

THE NEW BUILDERS' PRICE BOOK, a complete Estimator for the Midland Counties.
The Directors of the "Midland Master Builders' Association" beg to announce that a plan of Establishing Agencies for every description of Work and Material in the Trade, and especially in the Iron Trade, in the district of the Midland Counties
Great expense has been incurred in the arrangement, and all prices are fixed by unanimous concurrence
It was the general intention of the Directors to produce the Book much earlier, but having since been induced to include the Iron Trade, and by that means all branches of the Building Trade may be possessed of one uniform scale of Prices.
Thus, while at the Association produces and possesses the copyright of the work, the business portion of it is entrusted to the Publisher
A few of the advantages which a publication is intended to obtain only by the united efforts of Trade, Builders' Prices Books to the Midland Districts, will, it is presumed, be presently proof of, namely, a fair desire to all Trades concerned; and thirdly, the acknowledged want of facility in obtaining correct estimates in accordance with the general value of labour and material
As a work of constant reference this book will be in the hands of every Architect and Builder, hence its desirability as an advertising medium for Patents, Registered Inventions, Materials, &c. &c.
Illustrations, Diagrams, &c of first-class execution only, will be inserted, and for which no extra charge will be made beyond the space occupied
As orders are possessing blocks, and will have to illustrate their advertisements as in the case issues of "The Builder," can have their drawing reduced and neatly engraved. Drawings made if required
Terms for advertisements may be known on application.
No names for advertisements after the book, will be received until the work is printed, but each Subscriber and Advertiser will be expected to receive and pay on delivery
Communications may be addressed to THOMAS STEVENSON, Publisher, Wheeler gate, Nottingham.

THE ENGINEER and MACHINIST'S ASSISTANT; being a Series of Plans, Sections, and Elevations of Steam-engines, Spinning Machines, Mills for Grinding Corn, &c. and various Machines (the most approved construction at present in operation); with Descriptions and Practical Essays on various Departments of Machinery. New and improved edition. 2 vols. imperial 8vo. half-morocco, 42s.

THE ENGINEER and MACHINIST'S DRAWING BOOK; a Course of Instruction for the Practical Engineer, comprising Linear Drawing, Projection, Isometrical Curves, the various Forms of Gearing, Reciprocating Machinery, Shafting and Couplings, the Mechanical Powers, Hydrostatics, Hydraulics, and Perspective, on the basis of the Works of M. Le Blanc, and MM. Armengaud. Illustrated by numerous engravings on wood and steel, in 1 vol. imperial 8vo. half-morocco, 21s.

THE MECHANIC'S CALCULATOR, comprehending Practical Rules and Tables in the various Departments of Wrought Mathematical Mechanics. By WILLIAM GALBRAITH, Civil Engineer. 12mo. cloth, 5s.

THE MECHANIC'S POCKET DICTIONARY; being a complete Note-book of Technical Terms, Rules, and Tables, useful in the Mechanical Professions, Engineering, Machinery, and near 200 cuts and Diagrams. By WILLIAM GIBB. To the Press in cloth 3s.

A TREATISE on CLOCK and WATCH-MAKING, Theoretical and Practical. By THOMAS REID, Edinburgh. Illustrated with Twenty folding plates and vignette title. Royal 8vo. cloth, 20s.

THE PRACTICAL MEASURER, or, Tradesman and Workman's Assistant. By ALEXANDER PEDDIE. New edition, greatly enlarged. Imperial 8vo. 6s. 6d.

BLACKIE and SON Warwick-square City, London; and Glasgow and Edinburgh.

ANNUAL DIVISION OF PROFITS.
GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY,
14, Waterloo-place, London, and 64, Brown-street, Manchester.
DIRECTORS.
THE CHISHOLM, Chairman
RICHARD HARTLEY KENNEDY, Esq. Alderman, Deputy-Chairman
Major-Gen. Michael E. Bagnold

Archibald Speirs, esq.
Frederick Vaisey, esq.
Rev. F. W. J. Vickery.

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy-holders under their own immediate superintendence and control. The profits are provided annually, and applied in reduction of the current premiums. Policy-holders participate in profits after payment of six annual premiums.
The Annual General Meeting of this Society was held on the 30th of May, 1855, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that during the two last years, 1853 and 1854, between 2 and 3 new Assurances had been effected, producing an increase of premium income amounting to 14,000 per annum. It also appeared that, notwithstanding the extraordinary mortality which prevailed during the last year in consequence of the visitation of the cholera, it had not been found necessary to reduce, in the slightest, the allowance previously awarded to the Policy-holders.
The Members present at the Meeting were fully satisfied with the Report, and resolved unanimously that a Reduction of 3½ per cent should be made in the current years Premium payable by all Policy-holders entitled to participate in the profits.
Credit is allowed for half the Annual Premiums for the first five years.
The following Table exemplifies the effect of the present reduction

Age when Assured	Amount Assured	Annual Premium originally paid.	Allowance of 3½ per cent	Annual Premium now payable.
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	0 14 11 6	19 13 8
30	1,000	25 14 4	0 17 8	24 14 8
40	1,000	31 18 4	1 11 8	30 6 8
50	1,000	42 18 8	1 15 0	41 3 8
60	1,000	73 1 8	2 13 8	70 18 0

For Prospectuses and Forms of Proposal, apply at the Offices as above, or to any of the Company's Agents.
ROBERT TUCKER, Secretary.

SCOTTISH EQUITABLE (MUTUAL) LIFE ASSURANCE SOCIETY.
Incorporated by Special Act of Parliament.
THE TWENTY FOURTH ANNUAL GENERAL MEETING of this Society was held at Edinburgh, on Tuesday, May 1, 1855, The Rev. R. Lee, in the Chair, and, among other intimation, contained the following particulars:—
During the year closed on 1st March last—
658 Policies have been issued;
The sum Assured thereby amount to 2 4670.;
And the Annual Premiums thereon, 1 6 0 11.
The position of the society at 1st March was as follows:—
Existing Assurances £1,492,713
Annual Revenue 18,394
Accumulated Fund 210,843
This Corporation has been in existence Twenty-four years. It proceeds on the principle of mutual contribution, the surplus or profit being wholly divisible among the Members
The total Assurances Policies made at and since the 1st March 1, 1853, amounted to SIX HUNDRED AND SIX THOUSAND EIGHT HUNDRED AND FIFTY-FIVE POUNDS.
The amount paid to the representatives of deceased Members is upwards of SIX HUNDRED THOUSAND POUNDS
Copies of the 24th Report, and all other information, may be had on application at the Head Office, or any of the Agencies.
Agents in London—W. COOK, 126, Bishopsgate-street Within.
VIEW OF THE PROGRESS AND POSITION OF THE SOCIETY.

ROBERT CHRISTIE, Manager.
WILLIAM FINLAY, Secretary.
Head Office, 26, ST. ANDREW-SQUARE, EDINBURGH.

SECURITY TO EMPLOYERS.
THE TIMES ASSURANCE COMPANIES.
To Clerks and others entrusted as at the Joint Stock Companies.
Plate Glass Assurance.—Windows, mirrors, &c. insured against breakage.
Every description of life and fire assurance.
Apply to the Manager, 62, Lombard-st.

BONUS.—A Bonus has just been declared by the LAW PROPERTY and LIFE ASSURANCE SOCIETY, 99, on Policies of 1000l. only Five Premiums paid 75l. and so forth. A list of the Bonuses, Tables, Prospectuses, &c. may be had on application at the Offices, 5, Lincoln's-inn-fields, Strand, London.

LOANS at 5 per Cent. on personal security, in connection with Life Assurance. 200l. to 300l. preferred. No delays.—English and Foreign Office, 123, Fleet-street.
LEWIS C. HEATHFIELD, Secretary.

LOANS from 25l. to 1,000l. upon approved personal or other security repayable by easy instalments, extended not exceeding five months, are readily OBTAINABLE in the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Office, 17, New Bridge-street, Blackfriars. Rules 6d. each copy, 1s. per post.
CHARLES JAMES THICKE, Resident Secretary.

HOUSE PROPERTY WANTED.—Money advanced by way of mortgage on freehold or leasehold properties, at 5 per cent. Wanted, also, to purchase similar security for a large amount. Parties desirous of obtaining an immediate sale, or having a good investment to offer, will find it promptly attended to, by applying, prepaid, to Messrs. Lee and Pemberton, or Mr. SHEPPARD SCOTT'S Offices 15, Commercial-road, East, London.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 10a, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS which they can recommend as being made in the best manner—Venetian blinds for parlours, 3d. per foot; best holland blinds, on rollers, 6d.; best dittо, in spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s.; Tynan, and linen in great variety. Estimates, with prices and drawings to builders and the trade, forwarded on application, post free

CITY WINDOW-BLIND MANUFACTORY, 3, CREED-LANE, ST. PAUL'S, three doors from Ludgate-hill.—CULL, late HALLETT, D. TAN and CO. invites the attention of the trade to his wood cloth blinds, which will be found to be of a superior description, and at lower prices than those offered by most other manufacturers. Inside and outside blinds of every description made to order.—Estimates given for large or small quantities of blinds.

The Builder.

Vol. XIII.—No. 653.

IN concluding our last preceding contribution towards the Improvement of House Painters' Work,* we urged the importance to Art, of discovering a material or process, by which, whilst attaining complete durability of substance and surface, brilliancy might be avoidable. In our conception of these objects, we looked far beyond the limits of M. Chevreul's researches,—for the reason in regard to art, which was sufficiently given by reference to the advantage of fresco, as compared with oil-painting,—and in regard to durability, because all present processes, under the usual atmosphere of towns, required that early renewal which involved not only serious expense, but changes from the design of the original architect—always to be deprecated.

Hitherto the objects referred to have, we believe, not received the necessary attention, though their importance must be perceived by any who have thought much about the nature and capabilities of our art. But, the chemistry of vegetable and animal substances, to which the investigation of the properties of the oils belongs, is still in a nascent condition. There are, however, substances analogous to or produced from the oils used in painting, which might be made the subject of experiment; though the properties of which it is desired to have the benefit, are, perhaps, too much opposed to each other to be looked for in one and the same substance. They would be, in short, those of the fixed oil of linseed, and the essential oil of turpentine. A really "dead" *varnish*, colourless, and which would not require renewal, would otherwise answer all objects.

M. Chevreul seems to have had some idea of what was desired, although he has not given any particular reasons for choosing the substances upon which he makes his next experiments. The principal substance is one that he calls "*L'acide oléique hydraté*," otherwise the oleic acid, which we may state was discovered by M. Chevreul himself, and made known to the world in 1823, in his essay "*Sur les Corps gras*," which first established information as to the composition of oils and fatty substances. The acid is now abundantly produced in the manufacture of stearine candles. Till lately it was of very little value, as it burned ill in lamps. It appears not to have been obtainable except in a crude state. It is now found to be improved if agitated with dilute sulphuric acid, and other means are available by which it can be produced perfectly pure. When pure, it is a clear colourless fluid of oily consistence, inodorous and tasteless. It is distinguished by the property of rapid absorption of oxygen,—or, in other words, it dries very readily. Now, we must be careful not to attach great importance to a substance such as this, of which we ourselves certainly know but little. The oleic acid, indeed, were it to be tried in actual work, would have to be used with great caution. Taken alone, it dries too rapidly to admit of proper adherence to the surface, and very many of the mixtures, or combinations, into which it could enter are greatly deficient in this most essential quality for a pigment. Still it does seem not unworthy of notice, that other combinations have both the property of adherence, and that very advantage of which we are in search, viz. deadness of the surface. That this should be, would seem curious to many. It is stated in a little manual now before us,* issued by the Vieille Montagne Company, that the presence of acids in fatty substances will lead invariably to bad results, in the case of the pigments with which they are used. This, however, probably refers to the ordinary acids with which oils are clarified,—not to the organic acids.—When a quantity of the oleic acid is exposed, it has been noticed that a brown substance is produced, and that there is a disagreeable rancid smell, and such points would, of course, have to be taken into account. The acid also is said to decompose the carbonates,—though, as will be seen, M. Chevreul notes experiments on the acid mixed with carbonates, and he does not allude to such decomposition. This branch of the subject, however, is one which would deserve the extended research of an accomplished chemist like M. Chevreul. It only appears to us that considering the large quantities of the acid which must be produced in London, a case is made out for further investigation. What our author has done, forms a good opening,—even if his statements do not seem quite free from contradictions.

He mixes the acid with sundry lead, zinc, and antimony bases, and the results in the case of applied coats of paint are stated. First, as to lead. The compound of the acid and litharge adhered at once to the surface. Where the white of lead was substituted, forty-eight hours elapsed; but then, the coating began to harden. The experiments as to minium and chromate of lead, respectively, do not appear to have given satisfactory results. Next, as to zinc. The compound of the acid and anhydrous oxide of zinc, adhered at once. Nearly the same effect was noticed with the carbonate of zinc. The experiment on the simple chromate of zinc was not satisfactory; but the acid with the product obtained by boiling the bi-chromate of potash with oxide of zinc, adhered at once. In the case of the "Vert de Rinman" (oxide of zinc and oxide of cobalt), the coating adhered, though not immediately.

Passing over experiments with antimony and acetate of lead, we arrive at some made with litharge, white of lead, and white of zinc respectively, where the acid pure, or mixed with linseed oil, was used in place of the ordinary oil. In the experiments tried in the spring of 1849, on surfaces of oak, we have the acid and five different combinations of it, contrasted as to results, with a combination of linseed oil and litharge. M. Chevreul makes no allusion to the anti-siccative properties of the oak. By these, some of the contradictions we have referred to might have been shown to be only apparent. The several liquids and mixtures, with their results, are as under; it being understood that the acid is, in in all cases, in the hydrated form:—

1. *Oleic acid.* First coat absorbed by the wood, but that and the later coats would not dry.
2. *Oleic acid and white of lead.*—The second coat defective as to adherence; but the third very adherent. Dried "dead."
3. *Oleic acid and litharge.*—First coat set in six hours; second coat in about two days; third coat in about six hours. Perfect as to adherence. Dried dead. (Still M. Chevreul notices that the surface, though rough, was greasy to the touch; this he attributes to oleic acid in excess, and to the oleate of lead formed.)
1. *Oleic acid and white of zinc.*—Dried quickly; but not so readily as the last. Second and third coats defective as to adherence. Dried dead.
5. *Oleic acid, linseed oil, and white of lead.*—Dried quickly; but second and third coats defective as to adherence. Dried dead.
6. *Oleic acid, linseed oil, and white of zinc.*—Same as the last.

Whilst in the case of—

7. *Linseed oil and litharge.*—First coat set in three days; second coat in two days; third coat dry in twenty-four hours. When perfectly dry, the surface shining. Second and third coats very adherent to the wood.

Out of the above list, it appears to be M. Chevreul's opinion that besides No. 7, Nos. 2 and 3 might be safely used; but he says that those are the only mixtures so available, since they afford the only instances where the mixtures will dry and also adhere. Remarking that the last mixture (7) is the only one that dries with a shining surface, the reason is given thus:—In all the *others*, solidification operates more or less rapidly between the ingredients—whereof one is liquid, and the other solid—the particles taking up their places without regularity, or in the positions they happened to fall into; but in No. 7, the absorption of oxygen being produced by a liquid body, and being by consequence slow, greater homogeneity results; the solidified oil, whether it have affinity for white or not, reflecting the light in a more regular manner. Finding the rapidity with which the acid with litharge or white of zinc became solidified, he considered whether advantage might be derived from this in practice; but the result was not satisfactory: the solidification proved to be too rapid; therefore he added to the acid both linseed oil and turpentine. In June, 1849, he laid on two deal doors the mixtures as under:—

No. 1.—Oleic acid, 2 parts by measure.
Linseed oil, 1 "
Turpentine, 1 "
Manganesed oil, 0.5 "
And white of zinc.

No. 2.—Linseed oil, 4 parts by measure.
Manganesed oil, 0.5 "
Turpentine, 1 "
And white of zinc.

As to drying, the effects were precisely similar in both cases, the first coats being dry in two days, and the second coats in one day. In regard to appearance, there was some difference, No. 1 being "dead," as compared with No. 2. This result, however, was obtained at a serious disadvantage, No. 1 having the capital defect of want of adherence to the wood. We should at once admit that no practical conclusion has been got to, in regard to the use of the oleic acid; indeed, what has been just stated will show how much caution would be necessary before using it in the manner in which M. Chevreul, before undertaking the experiments, seems to have supposed it might be useful. But, with such properties as it has, and considering the large quantities of it which no doubt may be obtained at Vauxhall, it must be well worth the while of English chemists to continue the French researches. The result, at all events, might give us what we seek, from properties of some of the other organic acids, or bases, of which the oils are composed. There are also important differences in the several kinds of oils. The linseed oil is said to contain an acid of its own, which has been called linoleic acid, and, as obtained, has much mucillagineous impurity. Walnut oil is remarkable for a siccative property, superior to that of linseed oil, and its want of colour renders it a good vehicle for many kinds of paints. Hempseed oil is also in use. There is, consequently, a field for research considerably more extended than the area of the present researches. Our own abstract of these has now included nearly everything that we can expect will receive attention from practical house-painters.

* See page 337, continued from pp. 109, 193, 243, *ante*.

* Manuel des Peintures au Blanc de Zinc, ou Conseils aux Peintres en Bâtiments sur l'Emploi et les Avantages des Peintures au Base de Zinc. Paris: 1855.

The tables completing the series of experiments on oleic acid are too extended to be given entire, and chemists who would pursue the investigation, would do well not to be satisfied with any abstract. The subsequent experiments, indeed, appear to us of less immediate moment, since the material on which the coats of paint are laid, namely, oak, is still not in that place alluded to by M. Chevreul, as possessed of anti-siccative, and other properties, which might go far to modify some of the results. We may, however, say that he found on mixing the acid, or the acid and linseed oil, or acid, oil, and turpentine, in various proportions with ochres, or other colouring substances, without the ordinary lead, or zinc base, all were soft, and not adherent to the wood. In the following case, however:—

Oleic acid	2 parts
Linseed oil	1 „
Turpentine	1 „
And white of lead,	

though the first coat required eighteen days to be absolutely dry, the second coat requiring four days, the coating was ultimately hard, and very adherent. The white of zinc was not tried in those experiments. The reason why the particular combination above given, is the only one that will solidify, and at the same time adhere to the wood, our author says, is involved in the following:—First, the acid is capable of "a sort of combination" with the white of lead, though the product is not to be confounded with an oleate of lead; and, second, there is the property of drying slowly, which resides in the linseed oil.

In the last series of experiments, in the spring of 1849, several different oils and vehicles were tried on oak, with sundry bases and colouring substances. First, linseed oil and manganesed oil, were each mixed with umber, and in all cases the three coats dried in eight days, the adherence, however, being but middling. The oleic acid with umber was, indeed, imbibed, but remained sticky, and without adherence. Next, the acid was tried with an addition of one-fourth of turpentine, with oxide of zinc, red oxide of iron and yellow ochre. The three coats again required eight days, when they were perfectly dry, and with a dead surface, but the adherence was but middling. The acid, with the manganesed oil, "noir de charbon," and yellow ochre would not dry; whilst using the same colouring substances, and substituting linseed oil and litharged oil for the other ingredients, the three coats required seven days, when they dried, with a slightly shining surface, the adherence, however, being but middling. In the next case, litharged oil and manganesed oil were each treated with ivory-black, and those two compounds were mixed; and in that case the adherence was great, the surface being shining.—Two different mixtures were then prepared, and compared with each other. They were the following:—

A.		B.	
Linseed oil	2 parts.	Oleic acid	2 parts.
Turpentine	1 „	Linseed oil	1 „
Manganesed oil	1 „	Turpentine	1 „
		Manganesed oil	1 „

Three coats of each of these, mixed with whatever substances, dried in six days. With the chromate of zinc and Prussian blue, the adherence was satisfactory in the case of A and B. But whilst A dried with a brilliant surface, that of B was dead (*mâte tendre*). As regards the same vehicles with red ochre and "charbon" in place of the chromate and blue, A was brilliant and adherent; whilst the surface of B seems to have varied in the experiments—its adherence being slight. Substituting white of zinc, red ochre, yellow ochre, and umber, A was brilliant and adherent, whilst B was dead, with feeble adherence. Next, with white of zinc, chromate of zinc, and vermillion, the contrast between A and B was similar,—as also where there was white of zinc and Prussian blue, or white of zinc, blue, and vermillion. Thus it is seen, first, that all the mixtures where the acid exists in a state of purity or mixed with linseed oil, when laid on are dead, and on coming to the solid state have little adherence; secondly, were it desired to have the surface brilliant as well as adherent, a siccative oil (for example, linseed oil), should be present in such a proportion that the particles of the oil in absorbing oxygen should not be too far removed from one another by the interposition of the solid and opaque matter with which they are incorporated.

When oleic acid is mixed with oxides capable of solidifying it, the acid passing almost instantly to the solid state, can present no uniformity in the mass of particles of the oleate produced. The case is different with a siccative oil passing progressively to the solid state by the absorption of oxygen. The slowness of the change permits the oily particles to take a symmetrical arrangement which would render them transparent, did they not include amongst them opaque particles. If the latter do not predominate, the arrangement is such that the surface of the dry oil reflects light.

Such is the *rationale* of the subject, according to M. Chevreul, and it must be allowed that, together with the experiments, they do not leave our object of attaining a durable and dead surface in a highly satisfactory position, though in one which seems far from conclusive against us. We rather think that these researches give a better starting-point for the pursuit of the subject, than had before existed.

With the investigation into the influence of the physical properties of wood, in the second memoir, yet unpublished, the knowledge of the circumstances attending the drying will be complete. It is clear that vast improvements might be made in the execution of work, if painters would apply the information above afforded them in regard to the composition of the ordinary "driers," and those other siccatives by which it has been shown, in numerous cases they might be advantageously replaced. As it is, even in large establishments, no attention is given to the subject, and any kind of "patent drier," wherein the extensive adulteration is the only thing *patent*, is thought to answer the purpose. Whilst, however, these researches show that there may be considerable improvements, commercially considered, in the ordinary "driers," they show also that slight changes in the materials and proportions of pigments may lead to very important results. If such improvements result from the consideration which we venture to say, the particulars we have given well deserve, our general readers will have no reason to regret that we have occupied our pages with matter of such moment in regard to the comfort, and durability of their dwellings, as well as to the interests of art.

We take this opportunity to say that a former article, noticed by a correspondent in our last number, seems not inconsistent with the experience as to the mode of using zinc paint. M. Chevreul's researches were as to painters' work in general. We referred to the mistake made in the mixture of a very large proportion of oil with the white of zinc; and the admixture of turpentine seems to have a possible advantage, or one beyond what it has with a lead base, which tendency, however, where the quantity of turpentine is further increased, brings with it the very disadvantages, resulting from excess of turpentine in the case of white of lead. We have refrained in the present state of the inquiry from expressing any opinion as to the white of zinc; but the use which has been made of it in other countries leads us to take great interest in the question of its advantages; and we may at least say it is clear to us, that the applications of it in England have been made under great ignorance of the best understood methods of using it, and have given it no fair chance of success.

ACCOUNT OF THE EXPENSES OF A JOURNEY TO PARIS AND BACK, INCLUDING A DETENTION AT LILLE.

The following account of the expenses of a short trip to Paris during last July may interest such of your readers, especially those of moderate means, who contemplate visiting that city. It is a *bonâ fide* copy of the entries made in my pocket-book each day, and I have inserted every item that I find there.

I add also a few notes and suggestions, which will, perhaps, be of some use to those who are unacquainted with Parisian life and customs, premising that I am a *poor* gentleman, that is, an artist, and that my notes are intended for that class:—

Date. July.		French Fr. c	English £. s. d
1.	Steamboat and rail to Lille	15 0	0 12 0
	Breakfast and steward's fee, &c.	3 75	0 3 0
	Dinner at Dunkirk	3 25	0 2 7
	Porterage and small sums	1 75	0 1 5
	Commissionnaire at Lille	0 50	0 0 5
2.	Hôtel de l'Europe, at Lille	7 0	0 5 7

NOTES FOR STRANGERS IN PARIS.

A stranger arriving in Paris, if he purposes staying more than a couple of days, and desires to economise, will do well to take a lodging rather than stay at an hotel. In Paris are a great number of *maisons meublées*, or houses let off in single rooms, or suites of apartments. Several of them will be found in the Rue Neuve S. Augustin, near the Rue de la Paix, as the Maison de Goest, No. 46; Hôtel d'Orient, No. 48; Hôtel d'Amirauté, Maison d'Alma. The situation is central and convenient, as Pat says, to the principal places of resort. A single room to serve as bed and sitting room, may be had from about (at present) 3 francs a day, to 5 francs or more: an *appartement*, or suite of two or more rooms, of course, will be charged higher. A traveller should take soap with him: it is seldom to be found in the hotels in France. On arriving in Paris in the afternoon from Lille, I took a 'bus to La Bourse, and walked thence to the Maison de Goest, 46, Rue Neuve S. Augustin (I had been there before), carrying my small travelling-bag myself, and in five minutes I had engaged a room, and had a supply of hot water to assist in removing the dust I had gathered on the road. I was certainly lodged nearer heaven than I ever was before, viz. *au cinquième*, but there was the "*mansarde*" above me, and I had every accommodation I wanted.

During my stay I dined usually at one restaurant, "Courrieux, au Grand Gastronome," in the Passage Choiseul (where a very good

SEDILIA, &c. CHURCH OF ST. MARY MAGDALEN, MUNSTER-SQUARE, LONDON.

linner is given for 1 franc 60 centimes, plus sous to the *garçon*), and seldom before seven r eight o'clock, when my day's work or pleasure vas over. I breakfasted where I happened to e at ten o'clock — sometimes cheaply, but ftener the reverse; and I found these two meals ufficient except as regards thirst; but cool everages are plentiful in Paris, and I was not o proud to step into a wine-shop, and get two ous of wine, which, mixed with a demi-siphon of au de Seltz, is a most refreshing drink. I did ot visit any of the great restaurants, as the estaurant de l'Europe, the Diner de Paris, as came to Paris for an intellectual feast, and ot for bodily indulgence, and besides, had no oney to spare. A traveller will save himself uch trouble if he can stow all his baggage in ie parcel, and that not larger than he can rry with ease: a few shirts, abundance of ocks, a pair of shoes, and change of clothes, are l he requires for a week or ten days. He need t even take his shaving tackle, for I noticed l the English in Paris had left off shaving on hding in France, and you could tell how long ace they had left home by the length of their ards. If he purposes making a longer stay, can easily get his linen washed—even day by y. No sensible person would attempt to uggle anything over either way: a pint of ench brandy is allowed on landing in England, d it would be difficult to pass more without tection, and half a dozen of French gloves will t be taken unless *concealed*.

A person tolerably conversant with French liable to a few errors, which make one look lall: *e.g.* at a café, for instance, do not call for *café*, or *de la groseille*, but *un café—une seille*. Also after dining, do not ask for *n billet*, but *mon addition*. There is also this tinction between a café and a restaurant—first is a place for drinking, the second for ing. As regards lodgings, all the notices for *nished* apartments, are on *yellow* paper, se for *un*furnished apartments on *white*—*appartement* is a suite of rooms—*une chambre* is one room. "Voitures de Place," are the cabs with big red numbers on the back—they are found on stands. "Voitures de Remise," have small red numbers, and drivers in livery,—indeed are stylish-looking affairs, but dearer, 1fr. 75c. par course, the others 1fr. 25c.

At the theatres you keep your place by tying a handkerchief round your seat: no one will take either in your absence. D. W. R.

SEDILIA, ST. MARY'S, MUNSTER-SQUARE.

The accompanying engraving shows more in detail the sedilia, &c. in the church of St. Mary Magdalen, Munster-square, built under the direction of the late Mr. Carpenter, and illustrated in a recent number of the *Builder*.* The carving was executed by Purday, the polychrome by Messrs. Crace. The material is Caen stone, with shafts and panels of St. Ann's marble.

SOME MEMORIALS OF FATHER THAMES.

"The Thames," says a historian who wrote in 1794, "refreshes with its gentle waves the seats of learning, the palaces of kings, connects the commerce of the provinces which it adorns with the metropolis which it dignifies, and rolling on, with each returning tide, through those superb arches which unite its opposite shores, connects the commerce of the metropolis with that of the world, and continuing its course through the vast operations of trade on its banks, and by the royal arsenals, the manufactories of that strength which forms the national defence and protection, it expands at length, till, itself a sea, it mingles with the ocean." Old Father Thames was then a glorious fellow—stronger than he is now, and in comparatively decent condition. The Lord Mayor could then take his barge, and with pleasure and safety entrust himself for three or four days in his bracing atmosphere, not forgetting, in the midst of enjoyment, to cast an eye to abuses, and to listen as to necessary improvements, ordering the destruction of weirs and other obstructions. Things are changed now—more's the pity: we will not, however, pause at present to grumble, but wander to where we can enjoy the wholesome air, see the fresh green hawthorn bushes, where the "Birdesses," as Chaucer says, "singge clear," and stand beside that which is to us an inexhaustible subject for thought and enjoyment—the spring of a famous river.

Old Father Thames, like many men of great name, and nations of high renown, is traced to a humble source — a picturesque little valley near Cirencester, in the county of Gloucester. It presently joins three or four neighbouring rills, and many a tributary stream forms the chief of British rivers, which for several miles preserves a rivuletish appearance. It reaches Cricklade, in Wiltshire, where, being increased, it assumes a more important appearance. Approaching Kemsford, it re-enters its native county, dividing it from Berkshire, at Inglesham. The river enlarges as it approaches Lechlade, in Gloucestershire, situated on the confines of Berkshire and Oxfordshire, and receiving the waters of the Colm, it becomes capable of carrying vessels of from eighty to ninety tons burthen.

We must not, however, pass on without noticing the finger which Father Thames has thrown out to rapid Severn. This was an important junction, which, although contemplated as long ago as the reign of Charles II., was only completed by private enterprise about the year 1789. Even at the present time this is considered a great enterprise, and the tunnel looked upon as a good example of engineering skill; and as it has been thought by some that the Severn may be still further used with advantage in strengthening the exhausted resources of the

* See p. 355, *ante*.

Thames, we give the levels of the canal, and also the distance between navigable points of the two rivers:—

	Length.			Rise.		Fall	
	m.	f.	p.	f.	p.	f.	p.
From the head of the Stroud Canal at Wallbridge to Dana's way bridge	7	0	5	241	3	—	
From Dudbridge bridge to the entrance of the tunnel	0	2	5	Level.		—	
The length of the tunnel	2	3	5	Ditto.		—	
From the end of the tunnel to Upper Sapperton	5	3	3	Ditto.		—	
The branch to Cirencester	1	2	6	Ditto.		—	
From Upper Siddington to near Cricklade	5	4	1	—		102	2
From Cricklade to near Lechlade	8	0	5	—		28	4
	30	0	7	241	3	130	6

The Thames glides pleasantly along, and divides the counties of Berks and Oxfordshire, passing by Buscal-Harcourt, &c. to Oxford; from thence to Ifley, then on to Nuneham and Abingham, through the bridge of Wallingford, past the sweet village of Goring, the woods of Hardwick, the magnificent Maple Durham, and the pretty village of Caversham, to the vicinity of Reading.

The Thames then continues its course through Henley and Maidenhead bridges, and before it reaches Marlow serpentines through its vale in a variety of pleasing courses; then through a delightful piece of country, rich in old associations, to Windsor, where the noble castle crowns one brow and the academic groves of Eton College the other. Fine views of the stately Castle may be seen as we follow the Thames to Runnymede, that spot so intimately associated with the liberty and progress of England; from Runnymede to Cowper's-hill, standing on which,

"My eye, descending from the hill, surveys
Where Thames amongst the verdant valleys strays."

Let us look at Conway Stakes, where it is said the Roman general and his army crossed the river. There is, however, a good deal of controversy about this. Space will not allow us to wait and go very deeply into this matter, but we may say that these stakes, which at times we believe are still visible, are acknowledged to be the work of people earlier than the Roman conquerors, and that no little engineering skill has been used in driving the piles into the solid earth.* Some writers say that these piles were placed there to bother the Romans, and others argue that the depth of the water here would prevent the army from fording the river; and it is mentioned by the chronicler of the event that the infantry marched across with their heads and shoulders above water.

Staines, Chertsey, Kingston—the place of the Saxon kings—the magnificent Hampton-court, Twickenham, with its pleasant memories, its garden, and meads, to Teddington (tide-ending town), where a last feeble wave but faintly reaches—it forms a pretty picture, with its little church, villas, and ornamental gardens. We take the tide past Richmond and Kew—and here let us say, that with a week's time, a small knapsack, a light heart, and almost as light a purse, staff in hand, a man might, either with sketch-book or fishing-rod, travel most delightfully from Richmond, along the banks of Father Thames, to Oxford. However, we come to Fulham, and Putney, and then our enthusiasm begins to slacken: even Chelsea does not cheer us; and, rather melancholy than otherwise, we stop before "Paul's," and shutting as well as we can both eyes and nose, let us look back to the time when no spires, no bridges, not even houses or huts stood on the site of this now huge mass of buildings, and varied conditions of struggling humanity.

When Sir Christopher Wren began to build the new St. Paul's, in digging for a foundation, he came to a layer of Saxon graves lined with chalk, some in stone coffins; and at some distance below, the bodies of the British, only lapped in woollen shrouds, fastened with pins of hard wood, most probably box-wood. In the same row, yet deeper (this was 18 feet and more), were the ashes of the Romans, in urns—Britons and Romans together—the conquerors and the conquered, both vanquished. Lower than those graves stood the foundation of old St. Paul's, resting on very close pot-earth; and still lower, nothing but dry sand sometimes mixed unequally, but mostly so loose that it would pass through the fingers; then water and sand mixed with periwinkles and other sea-shells,—this was about the level of low-water mark. The gradual rise of the site of London by the formation of shoals, &c. will be readily understood by the above account. It grew by natural causes, and at the time of the arrival of the Romans, was probably a rude British stronghold defended by earthworks, and backed by thick woods towards the north, and surrounded on other sides by an immense extent of water, amid which the present course of the Thames could scarcely be defined.

So far as we can gather from the best authorities, and also from consideration and examination of the neighbourhood, it is probable that the place now called St. George's-in-the-Fields had begun, at the time to which we refer, to have an appearance something similar to what we can fancy was presented by the Isle of Dogs 500 or 600 years since—a shade of land above the water. In consideration of the large quantities of Roman remains which have been dug up in the Borough, in the neighbourhood of Kent, &c. &c. some antiquaries have supposed that the Romans first established themselves there, and not in London. However, the probabilities are, that the site to which we have alluded was at an early period of the Roman occupation used as a place of burial for the dead. Maitland, a historian who did not write without having carefully examined matters, says, "It can hardly be supposed that the sagacious Romans would have made choice of so noisome a place for a station as St. George's-in-the-Fields must then have been, for to me it is evident, that those fields must have been overflowed by every spring tide. For, notwithstanding the river being at present confined by artificial banks, I have frequently at spring tides seen the small current of water which issues from the river Thames through a common sewer at the Falcon not only fill all the neighbouring ditches, but also at the upper end of Gravel-lane, overflow its banks into St. George's-fields; and considering that about a twelfth part of the water of the river is denied passage by the piers and starlings of (old) London-bridge (it flowing at an ordinary spring-tide upwards of 19 inches higher on the east than on the west side of the said bridge), I think that this is a plain indication that before the Thames was confined by banks, St. George's-in-the-Fields must have been considerably under water every high tide, and that that part of the said fields called Lambeth-marsh was under water not an age ago."

The embankment of the river, a most gigantic work, was, although we have no particular account, executed, or at least directed, by the Romans. Few of the thousands who enter the Thames think that the great stream on which vessels of the largest size are afloat, is, in fact, an artificial canal, raised in many places considerably above the level of the surrounding country. It is a wonderful work, and it is singular that we should have no record of its first execution. The artificial bank of river extends either on one side of the river or the other, almost from the Nore to Richmond in Surrey, and some judgment may be formed of its magnitude, by the difficulty of repairing a breach made by a high and violent tide at Dagenham, in Essex. On this occasion (1707), a breach was made in this bank of the river of 100 yards wide, and nearly 20 feet deep, by which alarming accident 1,000 acres of rich land in Dagenham level were overflowed, and nearly 120 acres of land washed into the Thames, forming a sandbank nearly a mile in length, that extended over one half of the channel. After several unsuccessful attempts, Captain Perry, who had been employed in similar works by the Czar Peter, in Russia, at an enormous expense and with much difficulty, completed a wall. In carrying on these embankments, there were discovered, about 4 feet under the surface of the earth, great numbers of trees with roots, boughs, and some parts of the bark, which may be supposed to have been thrown down by storms and floods. They were principally brushwood, willows, and yews. Large quantities of hazel-nuts have also been found here, and horns of stags of unusual dimensions.*

It is difficult to estimate the advantages of the Thames embankment. After that was completed, many districts would be gradually gained from the waters; and *Thorney Island* (the site of Westminster Abbey), a small place, partly covered with scrubby bushes, and on which at an early period a hermit established his cell, extended in various directions. Southwark also increased; but then Lambeth, Vauxhall, and Battersea, now occupied by so many thousands, were under water, as was the greater portion of the land from Wandsworth to Woolwich, to Dartford, to Gravesend, and to Sheerness; and from the north range from Poplar to the Isle of Dogs. Scores of miles of that waste are now covered by multitudes, or converted into rich pastures or corn-fields; and year after year, in our own days, we see the skill of man in all directions, either making a scene of industry, or a "garden of a desert waste." It is truly wonderful to think that a little more than twenty years ago the greater portion of the ship-building yard of Mr. Mare, at Blackwall, where from 4,000 to 5,000 persons are busily employed, was a swampy marsh, overflowed by every spring-tide. A small establishment, for the purpose of building steamers of a moderate size, was planted on a somewhat suitable spot, and then the works grew; and by skill, industry, and capital, old Father Thames was slowly and surely driven back. At times he has made vigorous sorties, in order to recover his lost ground; but by piles of wood, on which most of the buildings stand; by the busy hands of man, and the help of the steam-engine, he has been successfully repulsed; and on his lost territories Nasmyth's hammers thunder and work, furnaces blaze both day and night, and thousands of smaller hammers fashion great ships, like the *Himalaya*, capable of carrying at one time a small army. A large town will soon spring up in the neighbourhood, and before long some miles of docks, filled with shipping, will extend eastward.

The Isle of Dogs is also rapidly being covered with houses and manufactories. In other places, in Lincolnshire, for instance, the land is becoming greater and the water less. The growth of populations on flat districts, urges the strong necessity of improved methods of draining and purifying towns, for it will not do for long to convert our rivers into sewers, and to waste that which, if applied to agriculture, would add to the fertility of the country. East of Dowgate, the first London-bridge was built. The date of this important event is uncertain, but was most probably between 993 and 1016. The importance of other matters in connection with Father Thames obliges us to pass slightly over the fearful invasions of the Danes, the ravaging and burning, the destruction of the early London bridge, the difficulty of keeping it in repair, and the story of the ferryman's daughter. We may, however, mention that it was burnt down in 1136, and in 1163 it was in such ill condition that directions were given to Peter, the curate of St. Mary's Cole Church, for building a new bridge.

The money required for the works at London-bridge was levied in various ways, not from London alone, but also from the provinces. In 1097, William Rufus exacted large sums of money in all parts of the kingdom, towards the carrying on his works at the Tower of London, at Westminster, and also in rebuilding London-bridge anew, with wood, which some time before (1091) had been carried away by a great flood: it would thus appear, that for upwards of six years London was left without a bridge.

That these levies were continued, with but few exceptions, in the time of Henry I. is shown by the following order:—

"Henry, King of England, to Ralph, Bishop of Chichester, and all the ministers of Sussex, sendeth, greeting. Know you, &c. * *. I command by my kingly authority, that the

* Mr. G[illegible] wrote a dissertation on the County stakes [illegible] the great difficulty experienced by a [illegible] quarry in obtaining a specimen of the stakes. He tried various plans; amongst others, fastening a rope to one of the stakes, and [illegible] however, [illegible] and black as ebony.

* Some [illegible] were turned up at the [illegible] for the Victoria Docks, at Poplar. See account in *Build.*, vol. xii. p. 44.

manor called Alchester, which my father gave with other lands to the Abbey of Bath, be free and quiet from shires and hundreds, and all other customs of earthly servitude, as my father held the same most freely and quiekly, and, namely, from the work of London-bridge," &c.

At about this time two or three important events occurred on the Thames, which we are bound to mention.

In 1099, a very high tide happened, which occasioned the River Thames to overflow its banks in divers places, whereby several towns and villages were laid under water, and many of their inhabitants, with an infinite number of sheep and oxen, were drowned; at which time the Godwin Sands were swallowed up by the sea.

In 1114, there happened such a defect of water in the River Thames, that great numbers of persons crossed, not only above and below London-bridge, but likewise through several of its arches, upon the ground with dry feet. This is a curious circumstance, and shows that the confinement of the river to a distinct channel has deepened its bed, for it would be next to an impossibility to ford at London-bridge now. We might infer the same thing, if *Hungerford* was, as it name implies, formerly a ford.

In 1150, after a wet season, the River Thames was frozen. Here, however, we must for the present pause, somewhat refreshed by even the idea of the benefit to Father Thames (if such a thing could be), of a sharp frost in these dog-days,—an idea that brings to our recollection the following petition, which we find reported in the *Gentleman's Magazine*, for the winter of 1740. It is as follows:—

"To the venerable sages of Westminster-hall, the humble petition of the River Thames, sheweth,—

"His complaint is of North and East, a couple of boisterous and mischievous bailiff's followers, who deprive him of the use of his limbs, and in one February night turn him as grey as a cat. * * * * He has become so hard and unnatural, that thieves and others trample upon him. * * * *" But we must cut short this old complaint, suggesting to him to try the use of a petition in his present unfortunate position, — which is worse for him and for others than the attack of the boisterous fellows he alludes to.

COLOUR IN THE CONSTRUCTION OF BUILDINGS.

At the present day there is, I think, absolutely no one point in which we fail so much, and about which the world in general has so little feeling, as that of colour. Our buildings are, in nine cases out of ten, cold, colourless, insipid, academical studies, and our people have no conception of the necessity of obtaining rich colour, and no sufficient love for it when successfully obtained. The task, therefore, and duty of architects at the present day is mainly that of awakening and then satisfying this feeling; and one of the best and most ready vehicles for doing this exists, no doubt, in the rich-coloured brick so easily manufactured in this country, which, if properly used, may become so effective and admirable a material.

The other mode of introducing colour in construction, by means of the use of marbles, deserves also some notice. In my notes upon the buildings as they were passed on my journey, I have described two modes in which this kind of work was treated: the first was that practised in Venice, the vencering of brick walls with thin layers or coats of marble; the other, that practised at Bergamo, Cremona, and Como, in which the marble formed portion of the substance of the wall.

These two modes led, as would naturally be expected, to two entirely different styles and modes of architecture.

The Venetian mode was probably rather likely to be destructive of good architecture, because it was sure to end in an entire concealment of the real construction of the work: the other mode, on the contrary, proceeded on true principles, and took pleasure in defining most carefully every line in the construction of the work. It might also be said that one mode was devised with a view to the concealment, and the other with a view to the explanation, of the real mode of construction.

I have already described, at some length, the main features of these old works in marble, and I feel, therefore, that all that need now be done is to point out the degree to which they afford matter for our imitation with the coloured materials and marbles which we fortunately have in Great Britain fit for the purpose, though not in very great variety.

There certainly appears to me to be a certain extent to which we may safely go in the way of inlaying or incrustation: we may, for instance, so construct our buildings as that there may be portions of the face of their walls in which no strain will be felt, and in which this absence of strain will be at once apparent: obviously, to instance a particular place, the spaces enclosed within circles constructed in the spandrels of a line of arches can have no strain of any kind: they are portions of wall without any active function, and may safely be filled in with materials the only object of which is to be ornamental. All kinds of sunk panels enclosed within arches or tracery would come under the same head: so also the spaces between string-courses might very frequently, if, as in old examples, the string-courses were large slabs of stone bedded into the very midst of the wall, and so capable of protecting the thin weak slabs of marbles encrusted between them.

In Venice we have some grand examples, at S. Mark's, of this system of incrustation filling in the whole of the space within large arches: here it is lawful, because there is no weight upon it to thrust it out of its place or disjoint it, as the least pressure most certainly always will. So far in praise of the Venetian system. But in other parts of the same building we have this system carried to a length which I cannot but think most mistaken, and which I most heartily trust may never find imitators here. In these they constructed their arches in brick, and then entirely covered them with marble. Of course there was some difficulty in doing this, and the way in which the difficulty was met was sufficiently ingenious: a succession of thin slabs of marble were placed round the soffit of the arch, having perhaps enough of the cohesion given by the form of the arch to enable them to support their own weight, and further supported by metal staples let into the joints of the brickwork. The edges of these thin slabs projected sufficiently in advance of the face of the brickwork to allow of their being worked with some kind of pattern—generally, as has before been said, a sort of dentil—and giving some support to the thin slices of marble with which the walls were then covered. The whole system was excessively weak; and this can nowhere be better seen than in the Fondaco de Turchi, where almost the whole of the marble facing and beautiful medallions, in which it was once so rich, have peeled off, and left nothing but the plain and melancholy sub-stratum of brick. Few architects, I should think, would like to contemplate their work perishing in this piecemeal manner, nor any more would they enjoy the thought of a west front left, like that of Sta. Anatasia at Verona, unfinished and prepared only for marble with rough, irregular, and unsightly brickwork.

It would be unjust not to say that often, very often, this system of incrustation, even when carried to the extreme limits of what seems to be lawful, wins upon our love by the exquisite delicacy and taste of the sculptured patterns, worked in low-relief, with which it is covered. The men who did this work were, perhaps, more of sculptors than of architects, and certainly it must be confessed that never in buildings in which the construction is mainly thought of, so far as I know, is so much elaborate thought and skill exhibited in the decorative part of the work as in buildings such as these.

Sometimes, too, the sculptured medallions set in the centre of a plain surface of marble are of exquisite taste and beauty; whilst here and there, as *e. g.* in S Mark's, and in one or two spots in the water-front of the Ducal Palace, are examples of great beauty, of medallions formed of marbles of various colours, arranged with great refinement in some kind of geometrical pattern, which show another and equally beautiful mode of relieving plain spaces of walling.

The surfaces of the walls in Venetian work were either entirely inlaid, or else inlaid within a square enclosing border of projecting moulding. The inlaying was composed of a number of rectangular slabs of marble, not by any means always of the same size, supported to some extent by the projections of the enclosing marbles or by those of the archivolt, but always dependent mainly on metal cramps let into the fabric of the wall; and, when possible, these marbles were slabs cut out of the same block, and put side by side, so as to produce a kind of regular pattern wherever the veining of the marble was at all positively marked.

The other mode of introducing constructional colour in marble commends itself to one's reason as that which is most likely to endure for ages, and as that, therefore, which ought, wherever it may be, to be adopted. The first idea of the architects of these buildings seems to have been to arrange their material with as much regard to strong contrasts of colour as was possible. The first thing they did, therefore, was to alternate the colours of every course of masonry, either simply as in the Broletto at Como, and in Sta. Maria Maggiore at Bergamo, or as in the west front of the cathedral at Cremona, where very narrow layers of white marble are laid between each of the other courses, which are of course so much the more defined.

The description which I have already given of these works, as well as of the porch at Bergamo, will show how regular is the way in which this system of counterchanging the colours was carried out by the purely constructional school: this is, in fact, the great mark of difference between the constructional and the encrusting school of Italian architects, the whole arrangement of coloured materials by the two schools being quite different, and producing singularly different results. The most common faults of the Venetian system of incrustation must have been that upon a general surface of plain wall you had here and there a square patch of marble surrounding a window opening: that of the other system would be, in the opinion of many, that you have too stripy an effect of colour, and that all the divisions, moreover, are horizontal.

The former must certainly have been the case wherever the incrustation did not extend over the whole surface of the walls; and this was very frequent: but the latter is not really a fault; it was only an elaboration in a more beautiful material of the same system which we have seen pursued with such happy results by the builders of Verona in brick and stone,* and which we find adopted by the architects of Northern Germany in the frequent alternation of courses of red and black brick, and sometimes by our own forefathers in the coursing of flint-work with stone, or in the counter-charging of red and white stones which we see in some of the Northamptonshire churches. The system was a thoroughly sound one, because it not only proceeded from and depended on the natural arrangement of the material, but afforded the best possible means for displaying the various colours which were to be used.

Probably all these systems are mainly useful now as showing us certain principles which we may work out and apply to our own somewhat different circumstances; and surely one of our first objects ought to be the discovery of the extent of our means and opportunities, which in this matter are at the present day far beyond what is generally imagined.

It must never be forgotten by us that our forefathers had very limited means of obtaining materials from one locality and transporting them to another; and were, moreover, to a great extent, unacquainted with the materials which might, if necessary, be obtained. We have not this excuse: we not only know what materials we may obtain, but we have at the same time marvellous facilities for their conveyance between all parts of the country; and we know

* Some of the mediæval buildings in Greece have small [illegible] courses on low relief all round the walls in courses and courses, which is evidently intended to produce the kind of effect referred to above.

also how much has been done of old in other countries by using them in a proper way.

No excuse therefore can be found for us if we continue to neglect to avail ourselves of them, as though they were still undiscovered. We have alabaster, which may be wrought at a really trifling expense; large fields of marbles, of which those of Devonshire and Ireland are particularly valuable for architectural decoration, and those of Derbyshire and Purbeck for the formation of shafts and columns: we have, moreover, an exhaustless supply of granites of various colours; of magnificent serpentine; and, lastly, of building-stones of various colours, very effective when contrasted. In addition to these natural materials we have every facility for making the most perfect bricks; and, owing to the excellence already achieved by our manufacturers of pottery, we have no difficulty in making tiles, either for roofing or inlaying, of any degree of beauty either of colour or form.

With such advantages we ought long since to have effected far more than we have ever attempted, or apparently ever thought of. Our buildings should, both outside and inside, have had some of that warmth which colour only can give: they should have enabled the educated eye to revel in bright tints of Nature's own formation, whilst to the uneducated eye they would have afforded the best of all possible lessons, and by familiarizing it with, would have enabled it to appreciate, the proper combination of colour and form.

Besides this, if ever the day shall come when our buildings thus do their duty and teach their proper lesson to the eye, we may hope that we shall see a feeling, more general and more natural, for colour of all kinds, and for art, of every variety, in the bulk of our people. At present it is really saddening to converse with the majority of educated men on any question of colour: for them it has no charms and no delight. The puritanical uniformity of our coats, indeed of all our garments, is but a reflection from the prevailing lack of love of art or colour of any kind. A rich colour is thought vulgar, and that only is refined which is neutral, plain, and ugly.

Perhaps in all this there may be something more than art can ever grapple with: it may be ingrain and part of the necessity of the present age; but, if so, oh! for the days when, as of yore, colour may be appreciated and beloved, when uniformity shall not be considered beauty, nor an ugly plainness be considered a fit substitute for severity! Oh! too, for the days when men shall have cast off their shame-faced dependence on other men's works and the art of other ages, and, like true men and faithful, shall honestly and with energy, each in his own sphere, set to work to do all that in him lies to increase the power of art and to advance its best interests. All these aims and objects are more or less bound up with the best interests of a people, however old and however powerful, because they depend for ultimate and real success upon the thorough belief, on the part of all its votaries, in certain great and eternal principles, which, if always acted upon, would beyond all doubt sometimes make great artists and always good men.*

ART-UNION OF LONDON EXHIBITION.

The annual exhibition of works of art selected by the prizeholders in the Art-Union of London is now open at the Gallery of British Artists, Suffolk-street. "The Fortune-teller," by J. Sant, "Dante begging his Bread," by Hurlstone, "Relenting," by T. Brooks, and "Autumn in the Highlands," by S. Percy, occupy the principal centres in the large room, and Mr. Buckner's "Family at Saraginesco" has the place of honour in the second room. As we have already given a list of the principal pictures purchased by the prizeholders, and mentioned many of them in our notices of the various exhibitions, it will not be necessary now to particularize to any extent. There are some very excellent landscapes by Gilbert, H. J. Boddington, Hulme, Witherington, Willis, G. Stanfield, J. Danby, and others, and "Free Sittings," by J. Underhill; "Cuddie Headrigg," by D. W. Deane; "The Truant," by G. Smith; "Lalla Rookh," by F. Wyburd; "The Keeper's Companions," by Harry Hall; "An Italian Mother Praying," by H. Pickersgill; and "Haymaking," by G. E. Hicks, will not escape notice. In the water-colour room, there are some excellent drawings by Gastineau, Absolon, Taylor, Callow, John Gilbert, Mole, Bennet, H. Warren, E. Warren, Robins, and others.

The engraving for the current year, "Harvest in the Highlands," after Landseer and Callcott, is a very fine work.

A glance over the Society's published report might lead some of our readers to say, with the *Morning Advertiser*, that "whatever difference of opinion may exist as to some of the plans adopted by the Society, it must be universally acknowledged to have been carried on with an energy never surpassed, at all events by an amateur corporation—with no feuds and increasing success."

* From "Brick and Marble in the Middle Ages: Notes of a Tour in the North of Italy." By G. E. Street, Architect. London: John Murray.

SHOPS AT AUDLEY, CHESHIRE.

We here give the plan and elevation of a block of village shops now in the course of erection at Audley, in Cheshire, from the designs of Mr. W. White. The row forms the side of a very narrow street (16 feet wide), and, to make the most of the space, the ground-floor is made to recede beneath an arcade, thus forming a covered way 3 feet 2 in. wide for the protection of foot-passengers—somewhat after the fashion of the rows at Chester. Between the third and fourth houses is an arched entrance to the stable-yard.

The whole is built of red brick, with a few bands of black headers, the arches being relieved by the introduction of a few black and buff bricks, the arrangement of which is shown to a half-inch scale in the elevation of the lower part. The roofs are to be covered with red tiles. The ground falls rather rapidly, and thus gives occasion for a little picturesque deviation from the uniformity of the general treatment.

THE DESIGNS OF THE BOARD OF ORDNANCE.

A writer in the current number of the *Ecclesiologist* draws attention, as we have done before, to the evil effects resulting from the course pursued by the Board of Ordnance, who persist in compelling the members of a military corps to fulfil the duties of civil architects. He gives the barracks now in course of erection at Devonport as an example. The recent offer of premiums by the Board for designs for barracks, to be sent in by the 30th of September next, may be regarded as an indication of their willingness to adopt another system. We hope to see some thoroughly good designs amongst those sent in. The fullest information should be obtained, both at home and abroad; and then, working on this, skill, attention, and intelligence will achieve success and found a reputation.

As regards the decision, we shall expect to find in the Board that acute sense of honour which we associate with the character of English soldiers.

STAINED GLASS.

Two windows in St. Peter's College, Cambridge, have been filled with stained glass, from the royal manufactory at Munich. They are treated pictorially, we understand, and without regard to the mullions.

The large west window of the new church at Ambleside,—a window of four lights, of the Decorated period, has now received the stained glass prepared for it by Mr. Warrington. The subjects relate to baptism and regeneration, and are as follow:—

1. St. John preaching in the Wilderness.—Inscribed, "Repent ye, for the kingdom of heaven is at hand."

2. Our Lord's Presentation in the Temple.—"Lord, now lettest thou thy servant depart in peace, according to thy word, for mine eyes have seen thy salvation."

3. The Baptism of Our Lord.—"This is my beloved Son, in whom I am well pleased."

4. Our Lord inspiring the Apostles, and commissioning them.—"Receive ye the Holy Ghost: whosesoever sins ye remit they are remitted unto them."

These subjects are all surmounted with tabernacle work, interspersed with the symbolic vine, and containing, in various niches, Evangelistic figures.

If we remember rightly, there is some very indifferent glass in other windows of this charmingly-situated church, and we shall be glad to find that we can endorse the praise given to Mr. Warrington's work by the local press.

We do not make the progress in stained glass that might be looked for. The majority of windows put in are poor things, and, unluckily, it is not the best that the public praise most. What we want is a glass painter who will combine religious feeling, earnestness, invention, good drawing, and good colouring. Years ago, the writer of this notice sought to convince the English public that, with enlightened patronage works, in stained glass, rivalling anything of previous times, might be produced; and we still believe it, though certainly they come slowly. "The only way in which the regeneration of stained glass," says Mr. Oliphant, in his modestly-written "Plea for Stained Glass,"* "is by insisting upon all those qualities of design and composition in glass which are deemed indispensable in other arts; the same correct drawing—and in the attainment of this, there is no need to destroy any conventional propriety,—the well discriminated but low relief which softens, without injuring the flatness of the surface—the distinctness of its gradations and contrasts; and, lastly, that the quality and beauty of its material be fully developed in all its brilliant scale of light and colour; and the cost, rely upon it, will regulate itself in glass as in every thing else. In other words, accept nothing but good glass, good design and execution, good and correct drawing, a composition suited to the place and subject, and an artistic treatment of colour, worthy of the splendour of the material employed. Do this, and you will speedily have glass worthy of the art-enlightenment of the time, worthy of its own scope and opportunities, and which will add a fair and brilliant flower to the wreathed coronal of art."

Mr. Oliphant discusses in his little volume on "Painted Glass," first, the field it has to work on; secondly, the material it has to work with; thirdly, the purpose for which it is introduced; fourthly, its scope, capabilities, and distinctive qualities; and lastly, its universal applicability. We gladly take this opportunity to recommend it for wide perusal.

UNDERGROUND ROOMS AND CELLARS IN THE METROPOLIS.

The provisions which have now existed for about ten years in the Metropolitan Buildings Act, with reference to the occupation of cellars and rooms unfit for habitation, will be, we are glad to observe, re-enacted in the new Metropolitan Buildings Act and Metropolis Local Management Act, being made more stringent, and capable of being carried out. An Inspector of Nuisances will be appointed by every vestry or Local Board, who will see that such cellars and rooms, unfit for habitation, are not so used, and will enforce the penal clauses of the Act in cases of infraction. We were gratified at hearing Lord Wodehouse, who had the conduct of both Bills for the Government in the House of Lords, remark, on Monday night, in the House, that it was not proper that the district surveyors should have the duty of enforcing the penalties imposed in that behalf, and so retracting, on behalf of the Government, the charge which had been made against these officers at the commencement of the session, that such a duty is imposed upon them by the present Buildings Act, and that they had failed to discharge it.

The Gloucester City Surveyorship.—Mr. J. Hauvey, of Burslem, C.E. has been appointed surveyor to the City of Gloucester.

SHOPS, AT AUDLEY, CHESHIRE.—Mr. W. White, Architect.

ON HYDRAULIC LIMES AND HARDENING STONE.

In the "Journal of the Society of Arts," we find some observations by M. Kuhlman, from *Cosmos*, which deserve attention. The writer says:—

"Entrusted, about the close of the year 1840, with some trials relative to some abundant efflorescence, which was formed on a perfectly new building, and which was considered to be due to the formation of nitre, I was soon convinced that the efflorescent salts were formed to a great extent of carbonate of soda, and that the lime which had been used (hydraulic lime, from the neighbourhood of Tournay), was the cause of the efflorescence which had been observed. A closer examination soon taught me that all limes, and particularly hydraulic limes and natural cements, contained appreciable quantities of potash and soda.

Theory of Hydraulic Limes.—In a work which I had the honour of presenting to the Academy, at a meeting held on the 5th of May, 1841, I endeavoured to explain the part which potash and soda might play in stones and cements, and I admitted that these alkalies served to bring the silica to the lime, and thus to form silicates, which, by means of the application of water, solidified a portion of the mass, producing the formation of a hydrate, analogous to that which takes place with plaster. I have pointed out since then to the Academy numerous facts as the basis of this theory, and that, among others, of the immediate change from fat lime to hydraulic lime, by simply treating with a solution of silicate of potash. If, after the burning of the limestone, potash is in contact with silica, the silicate which is formed must necessarily react, and this can only take place as soon as the burnt lime is brought into contact with water.

I have greatly added to my experiments on this head, and I have established the fact that, with fat lime and silicate of potash, both of them pulverised and mixed in the proportion of 10 or 12 of silicate to 100 of lime, a lime can be obtained which shall have all the characteristics of hydraulic lime. If these substances are not well pulverised the reaction will be very incomplete, and an effect will subsequently be produced, bringing on disintegration. If from my former trials there results the possibility of converting a fat lime into an hydraulic mortar, by sprinkling it with a solution of an alkaline silicate, in my more recent trials I have found a means of producing at once, with a vitreous silicate and lime, hydraulic cements of any required degree of strength. This will enable us to form, at a reasonable expense, buildings to stand the action of water, in places where fat limes alone are now found. Powdered silicate of potash in some sort becomes an agent for producing this hydraulic property, of which future experience will determine the value.

Artificial Stones.—Looking at the great affinity of lime for silica dissolved in potash, I was naturally led to examine the action of alkaline silicates on calcareous stones. Here I was still more fortunate, for the alkaline silicates became at once the means of a variety of applications of the highest utility. Let us look at what is said on this point in the 'Comptes Rendus' of the Society's meetings:—

'By mixing some powdered chalk in a solution of silicate of potash, a cement is obtained, which hardens slowly in the air, assuming a degree of stiffness, which, under certain circumstances, renders it applicable for the restoration of public monuments and the manufacture of moulded articles.

Chalk, whether in an artificial paste or in its natural state, plunged into a solution of silicate of potash, takes up, even when cold, a quantity of silica, which may be increased considerably by exposing the chalk alternately to the action of the siliceous solution and the air. The chalk assumes a smooth appearance, a compact grain, and a colour more or less yellow, according as it is more or less impregnated with iron.

Stone thus prepared is susceptible of a high polish. The hardness, which is at first but superficial, penetrates by degrees into the centre, even where there is considerable thickness. It appears capable of becoming of incontestable utility in the formation of works of sculpture, and ornaments of the most delicate workmanship; for when the silicifying process—"*silicatisation*"—has been effected on well-dried chalk, without which good results are not possible, the surface remains unalterable.

Some attempts made to render this stone applicable for lithography give promise of great success.

This method of converting soft limestone into siliceous limestone is likely to become a great acquisition in the art of building. Ornaments, unaffected by damp, and of great hardness, may thus be obtained at little cost; and, in many cases, a plaster made with a solution of silicate of potash will preserve from subsequent decay ancient monuments formed of soft limestone. This same plaster may become of general application in those countries where, as in Champagne, chalk forms almost the only building material.'

I have shown experimentally that one part of the silica from the silicate becomes separated by the action of the carbonic acid of the air, but that those parts of the silicate which have come into contact with a sufficient quantity of carbonate of lime pass into the state of silicate of lime. My work, presented to the Academy in 1841, pointed out numerous industrial purposes to which the impregnating of porous bodies of mineral substances might be applied, whether the objects operated upon were organic or inorganic. Considering these applications of the art as of the first importance in building, I have attempted to extend them, and I have just laid before the Academy a new series of observations.

Harmonizing the Shades of the Silicified Stone.—I have given the name of '*silicatisation*' to this remarkable conversion of soft and porous limestone into siliceous and compact limestone. As the operation of this process to articles of sculpture and building materials gives rise to a colouring very frequently so marked as to render the joinings more apparent and the veins more distinct, I have been compelled to seek a remedy for this objection.

There are two essential and general points to be met. Chalk walls are too white, while some kinds of ferruginous limestones are too sombre in their shades. To obviate this inconvenience, I perform the *silicatisation* of limestones which are too white with a double silicate of potash and magnesia. This is a vitreous substance, which forms a brown solution, and which when used in the process causes a little oxide of manganese to be deposited in the artificial siliceous paste. Oxide of cobalt, too, will combine, though in very small quantities, with silicate of potash. Silica precipitated by a current of carbonic acid is of a brilliant azure blue. This silicate may be used in the treatment of white marbles.

When the shades of the stone are too decided, and that is the most common defect, I obtain good results by mixing in the silicate solution a small quantity of artificial sulphate of barytes, which, in penetrating the porous stone, whilst it forms a layer of silica remains fixed, entering into a state of chemical combination. As regards the joints, they may be made with common cements, the shades of which may be rendered lighter by means of some white substances, but they may be still more entirely concealed with broken pieces of the stone itself mixed with silicate of potash, the whole being well pulverized previous to its use, and applied in a state of liquid paste.

WILD-COURT, DRURY-LANE.

IMPROVEMENT OF DWELLINGS.

At the close of last year we gave an account of a block of miserable dwellings forming Wild-court, Drury-lane, with a number of sketches to illustrate their appearance and condition.* We related how that the Society for Improving the Condition of the Labouring Classes had taken these premises on lease, and were about to fit them for healthful habitation. This has now been effected: the sum of 2,000*l.* has been expended upon the thirteen houses, under the direction of Mr. Henry Roberts and the superintendence of Mr. Baxendell: walls have been underpinned, hundreds of loads of decomposing filth removed, drainage, water-supply, and ventilation attended to, and a water-closet in an open gallery provided *for each floor*. Eighty-three families are occupying ninety-two of the rooms, at rents varying from 1s. 3d. per week per room to 3s. Those who take the apartments are obliged to subscribe to the following rules:—

No tenant can take lodgers, nor allow any soil or refuse to remain in front of the house. They must close the street-doors before dark every night; and no one will be allowed to remain in the lobbies or landings, or on the staircases at night. They must keep their rooms clean and well scrubbed, once a week at least. They must keep their windows clean, have their chimneys regularly swept, and deposit all dust and refuse in the shaft in the galleries for that purpose. The stairs and the landings must be scrubbed and washed down at least once a week; and the water-closets and galleries must be kept quite clean by the tenants in turn; while the tenants on the ground floors are to keep the lobbies and yards well cleaned and scrubbed; and the back cellar kitchens are to be kept properly cleaned up by the tenants when they have done their washing. The tenants are not to wash their clothes in their rooms, but in the back cellar kitchen, which is fitted up for the purpose, and to dry them as much as possible in the yards. There are also bye-laws, prohibiting the use of poles or cords for drying clothes out of window, the chopping of wood or breaking of coal or coke on the hearth, or driving of hooks or nails into the walls of their rooms, or pasting pictures against them. The ventilators are not to be covered over or stopped at any time. All slops and waste water must be thrown down the water-closets, and are not upon any account to be thrown through the attic windows into the gutters. Tenants who follow the markets must not keep their goods under their beds or in their bed-rooms; nor may rabbit-skins or hare-skins be kept in the rooms or hung out at the windows. No persons will be allowed to make their beds on the floor; nor will drunken and disorderly conduct be allowed, nor card-playing or gambling of any kind. The penalty for an infringement of any of these rules is *instant dismissal*; and it is expressly stipulated that free access shall at all times be given to the members of the committee, the secretary, the superintendent, or the workmen employed by them.

* Vol. XII. pp. 389 and 395.

PROVINCIAL NEWS.

Melbourn.—On Monday before last, the foundation-stone of a building now erecting here as boys' and girls' schools, for the trustees of the late Mr. John Trigg's charity, was laid by Miss Fordham, of Melbourn Bury. Mr. Nash is the architect, and Mr. Wm. French the builder.

Guilsborough.—On Wednesday in week before last, Holywell School, near Guilsborough, was inaugurated. The school is an oblong building, 30 feet by 16 feet, has a high-pitched open roof, the timbers stained and varnished: it is lighted by trefoil-headed lights, in groups of two, three, and five lights, with a trefoil in the south gable. Provision is made for a porch and cloak-room, but at present they are not built, owing to the want of funds. The south gable is surmounted by a metal cross. The building is erected of Guilsborough and Spratton stone, with Bath stone dressings. The floor is laid with Staffordshire quarries, and the roof covered with Staffordshire tiles. The school has been built after a design prepared by Mr. J. W. Hugall, of Cheltenham. The expense of the building has been defrayed by the patron of the living and his personal friends, and those of the incumbent, aided by the landed proprietors of the parish. Mr. Hart, of Leamington, was the contractor, and Mr. Richard Reeve, jun. clerk of the works.

Windsor.—Considerable improvement, says the *Windsor Express*, are being effected at Wentworth's Virginia Water, under the direction of Messrs. Cubitt and Co. Between seventy and eighty men are employed in making alterations which are expected to cost not less than 12,000*l.* This estate, it may be remembered, was purchased some time since for Cabrera, by his wife, formerly Miss Richards, now the Countess Morella.

Canterbury.—Messrs. Kirk and Parry, the contractors for the chapel-school to be erected at the rear of the Artillery Barracks, have commenced operations. The building is to be 105 feet in length, within the walls, with a depth of 57 feet, and is to be surrounded by a boundary-wall, surmounted with iron palisading. The style is Gothic, and the walls are to be built with Kentish rag-stone, with stone quoins. It is calculated for the accommodation of about 600 persons. The schoolmaster's residence is to be within the Artillery-gates, on the opposite side of the road to the spot selected for the school.

Bristol.—The local Society for the Improvement of Dwellings is about to commence immediate operations, having completed negotiations for the Old Queen Elizabeth's Hospital, Christmas-street, where they intend to erect a large number of dwellings, with all the latest sanitary improvements. The committee are also in treaty for other eligible sites.

Birmingham. — The Wesleyan Provident Assurance Society lately purchased a plot of freehold land in Moor-street, for the purpose of erecting thereon offices, board-room, &c. for their use, and the foundation-stone was laid on Wednesday in last week. The principal façade of the building is designed in the Renaissance style. It is divided into three bays, arched over, to receive the pediment and entablature. There is a balcony over the principal entrance. The whole will be executed in Portland cement. The building is from the designs of Mr. Samuel J. Smith, architect. Mr. Thomas Pashby is the builder. The cost will be 2,220*l.*

Wallasey. — The Works and Health Committee of the Wallasey Commissioners have reported that the tender of Messrs. Allen and Craven, for sewering the district comprised in contract No. 1, for 780*l.* was accepted; as also that of Mr. John Lane, for the sewerage of the district comprised in the contract No. 2, for 641*l.* 10s. The parish has been divided into three districts, Wallasey, Poulton, and Egremont, for drainage and other sanitary purposes.

Oldham.—The committee of the new market company, in Tommy Field, have accepted the contract of Mr. Walter Mahon, of Manchester, for the erection of the new market. The cost is estimated at between 3,000*l.* and 4,000*l.*; and it is intended that the market should, if possible, be opened about Christmas.

Durham.—On Wednesday before last, the Durham baths and washhouses were opened for the use of the public. The erection of the building has taken nearly two years, during which time various causes have prevented its earlier completion. The site is near Elvetbridge. There are two swimming baths.

CHURCH-BUILDING NEWS.

Windsor.—It is proposed to erect a Chapel-of-ease to the mother Church of St. John, Egham, on or near Englefield-green, for the accommodation of the inhabitants who live in the Sand-pits, Bond-street, Blay's-lane, Bishopsgate, Middle hill, and around Englefield-green. The cost of the church is estimated at about 4,000*l.*: this will include a small residence connected with it, as part of the provision for an additional curate. The subject has only been mooted, and already 700*l.* have been promised.

Akely.—On Tuesday before last the consecration of the newly-built Church at Akely was performed by the Bishop of Oxford. The church is a Gothic structure, with a tower and turret spire. A font has been presented by the incumbent's brother, the Rev. W. C. Risley, of Deddington. The church has been erected by Messrs. Franklin, of Deddington, from the designs of Mr. Tarring.

Canterbury.—The alterations and improvements in St. Paul's Church are now progressing in the hands of Messrs. Cozens and Lancefield, of this city. The works now in progress will add a third aisle, with a vestry on the south side, open to the church itself, and available for hearers when the other parts of the edifice are filled. Under this vestry the necessary apparatus will be erected for heating the church with hot air, on the principle now in use in St. Margaret's Church. The large old-fashioned pews will be succeeded by open, stained seats, and the dingy whitewashed ceiling give way to a modern panelled one. The outer walls are faced with flint, with Bath stone quoins and windows, in keeping with the other parts of the structure. The cost of the alterations will amount to about 2,000*l.* certain additional contingencies having arisen since the first estimate, such as the difficulty experienced in obtaining a good foundation for the south-west wall, two wells having been discovered in its line, and the apparatus for heating the building having been subsequently determined on. Of that sum, the vestry have resolved to borrow 800*l.* on the rates, thus leaving 1,200*l.* to be raised by voluntary subscription. The incumbent has already obtained about 600*l.* towards the amount required.

Drayton.—The church of this parish having been for many years in a dilapidated condition, some of the most influential and leading landowners have determined to put it in good order, which is now being done, under the superintendence of Mr. Maurice Davis, of Langport, architect.

Almondsbury. — The consecration of a new church at Cross Keys, near Northwick, in the parish of Almondsbury, was to take place on Wednesday last. This church, which has been raised by the exertions of the vicar, the Rev. Henry Gray, and at his own expense and that of his friends and relatives, will accommodate 700 persons. It is situate in a remote part near the Severn, four miles from the mother church. There is still a debt of 200*l.* due on the building. The architect of the new church was Mr. Crisp, son of the Rev. T. Crisp, principal of the Baptist College, Stokes'-croft.

Idridgehay. On Thursday before last the new church at Idridgehay, the foundation-stone of which was laid on 22nd April, 1854, was consecrated by the Bishop of Lichfield. The edifice (which has been dedicated to St. James) has been designed with reference to the site, which is rather limited in area. It consists of a nave 39 feet long, 21 feet 4 in. wide, and 38 feet high to ridge of roof; a north aisle (separated from nave by two arches), 27 feet long, 11 feet wide, and 32 feet high to roof point; a chancel, 20 feet long, 16 feet wide, and 32 feet high; a tower, attached to the east end of aisle, the lower story of which forms the vestry, 9 feet square internally. There is a south porch, 9 feet long by 6 feet 6 inches wide. The style adopted by the architect is Gothic of the fourteenth century, and the whole of the walls, internally as well as externally, together with the doors, traceried windows and details, are all executed with a stone from Mr. Milnes's quarries, of a reddish grey colour. The roofs are all high pitched, and the principals, as well as the other timbers, clean wrought and oil stained. The covering of the top is of Burlington slates. There is a reredos under the east window, of carved stone. The sittings are all open and roomy. The chancel is fitted with stalls on each side. The windows are all filled with plain glass, at present, in lead. The tower is surmounted by a broach spire, the extreme height being 94 feet. The porch is of stone, with open traceried timbers for the sides, front, and roof. The churchyard is surrounded by a wall, with ridged coping, and there are two entrances, with stone piers, gabled heads, and wrought-iron gates. The design of the architect, Mr. H. I. Stevens, has been carried out under the gratuitous superintendence of Mr. Parker. Messrs. Robinson and Co. are the builders. The church is fitted up with a heating apparatus, by Sylvester and Co. of London. The cost of the whole, according to the *Derbyshire Advertiser*, is about 2,000*l.*

Stockport.—On Wednesday before last the foundation-stone of a church, dedicated to St. Matthew, was laid, amid much rejoicing, in Edgeley, by Mr. W. T. Egerton, of Mere hall, Knutsford, M.P. The ecclesiastical district of St. Matthew embraces the hamlets of Edgeley and Brinksway, and a small portion of Stockport proper. The style of the church is Transitional Geometric; the windows containing fully developed tracery, each member of the tracery springing out of the soffets of each other. The plan of the church consists of a nave with north and south porch, and fully developed chancel. The sacristy is on the north side, and at the western end of the nave is a tower and spire reaching an elevation of 165 feet, and surmounted by a floriated metal cross and weather vane. The nave will be pewed with open seats, and the chancel will be arranged for the clergy and singers, and with movable seats for the accommodation of Sunday-school children. There will be no galleries. The church is expected to be completed about September, 1856. The design is by Mr. J. S. Crowther, of Manchester, architect. Messrs. J. and J. Longson, of Stockport, are the contractors for the whole of the work, except the masonry, that having been taken by Mr. Haywood, of Alderley. The estimated cost will be about 4,000*l.* of which 1,400*l.* are still to be provided for. The church is intended to afford accommodation for about 600, one-half free.

Loversall.—The ceremony of laying the first stone of the new south aisle and nave of Loversall Church, took place on 27th July. The stone was laid by Mrs. Banks, of St. Katherine's. A considerable portion of the stone for this work, it seems, has been given by Mr. G. S. Foljambe, of Osberton. The architect is Mr. Scott, and the builder Mr. John Athron, of Doncaster.

Grimsby.—The Grimsby Cemetery was consecrated on Tuesday in week before last, by the Bishop of Lincoln.

Lincoln.—The new cemetery was consecrated on Tuesday week, so far as regards the Episcopalian chapel and ground. Though presenting a very different appearance, the chapels are the same in plan, viz. a parallelogram, thirty feet in length by sixteen in width, with robing-rooms attached, in which a fire-place is provided. The walls are eighteen inches thick, strengthened with double buttress at the angles, and are faced with red stock-bricks, with Ancaster stone dressings in the less exposed parts, and hard Yorkshire in the plinths, base, and stringcourses, weatherings, copings, &c. Each chapel is situated on a slightly elevated terrace, approached by two steps. The walls, internally, are about fifteen feet high from floor to wall-plate, and finished in rough stucco. The woodwork of the roofs, the timbers of which are exposed and boarded over, is of fir, stained, and varnished, as are also the fittings. The windows are glazed with cathedral glass, in a plain margin; and the floors are laid to a pattern, with blue, red, and buff Staffordshire tiles. The west elevation of the Episcopalian chapel faces the visitor on entering the grounds. The style is decorated (1340). The western gable carries a bell turret, terminating in an ornamental metal cross, the top of which is 52 feet from the ground. The sum expended on each chapel was nearly the same. The style chosen for the Dissenters' chapel is the geometrical. The buttresses are capped with curved and weathered hoods, the apex of the gable terminating with a stone cross, an octagonal bell-turret being carried on the buttresses of the north-west angle in brickwork to the coping of the gable, and then terminating with a stone spire. The entrance-lodge and dead house are also built of stock-brick and stone dressings. The dead-house is lighted and ventilated by dormer windows in the roof. The grounds are nearly equally divided between Churchmen and Dissenters. The whole is surrounded by a brick dwarf wall, stone coping, and iron palisade fencing, 8 feet high. The works were contracted for by Mr. Hollingworth, jun. of Grimsby. The sub-contractors were Mr. John Goddard, for the stonework; Mr. Thomas Enderby, for the brickwork; and Mr. West for the plumbing, glazing, &c., all of them residents in Grimsby; and Mr. Green, of Leeds, for the ironwork. Messrs. Maughan and Fowler are the architects who furnished the designs.

Brechin.—The foundation-stone of the East Free Church, Brechin, was laid on 23rd ult by the Earl of Kintore. Amongst the visitors was Dr. Guthrie, a native of the ancient city of Brechin, who, in addressing those present said,—"I congratulate you on this building, which, from the plan, I see, is to be a very tasteful building. I put up, myself, in Edinburgh, a very pretty church, not so tasteful in the outside, however, as in the inside. It so happened that a lady came to me one day, and said, 'Oh! Mr. Guthrie, I am sorry to see you spend so much money upon the mere edifice.' Well, she had on a very magnificent silk gown, it was so gorgeous that it would have stood

itself. I most politely laid my hand on her gown, and said, 'How many Bibles would this dress buy, ma'am?' I think everything connected with the house of God should be respectable; and I will say, for the credit of the common people whom I love, that this is their feeling. What is the best dress they wear? It is that which they put on upon the Sunday. Which is the best bound book in the poor man's library? His Bible. I do think that everything connected with the Church of God should be superior? What remains of the grandeur of the Assyrian empire? What remains of the kingdom of Egypt? What remains of all the most celebrated of ancient nations?—their temples. I would serve God with the best of my time, with the best of my tongue, with the best of my heart. There is nothing deformed in God's creation. Go down to the nursery of my worthy friend Mr. Henderson there, and if you will produce an ugly flower in it, I will give up the whole concern." The architecture of this church is Middle Pointed. The area of the edifice is a simple parallelogram, the length twice the width, and the steeple in height three times the width. The principal entrance is by a tower porch, deeply recessed and richly moulded in the thickness of the walls. The church is from a design furnished by Messrs. Hay, of Liverpool.

ARCHITECTS' DRAWINGS: TO WHOM DO THEY BELONG?

As there appears to exist amongst professionals some incertitude on the question of property in plans, elevations, sections, and drawings,—that is, whether, on the completion of a building, they belong to the architect, or to the owners of new structures, I take the liberty of submitting the point for your opinion.

In order to render the question more distinct, we will suppose the case to stand thus,—the structure to have been completed, and the architect's fees or commission to have been paid.

"ARCHITECT."

*** Under ordinary circumstances, the drawings belong solely to the architect. He is employed to design and erect the structure, whatever it may be, with due regard to expenditure, and for that he is paid: the drawings are simply his means of proceeding.

ARCHITECTS' CHARGES.

JOHNS *v.* FREEDMAN.

In this case, tried at Cardiff, according to the statements made, Mr. J. W. Johns was an architect, formerly residing at Cardiff, but now carrying on his profession in London; and the defendant, Mr. Solomon Freedman, was a pawnbroker, residing in Bute-terrace, Cardiff. In April, 1854, the defendant engaged Mr. Johns to draw up plans and specifications for erecting three houses and a malthouse, and made various alterations in the plans from time to time. The plaintiff was also employed to negotiate a loan on mortgage of 600*l.*; but when the loan was offered, after considerable time had been occupied in effecting it, the defendant declined to accept it, because the mortgagee would not accept repayment by instalments of 20*l.* After having received the plans, the defendant resolved to build the houses without the plaintiff's assistance, and when the latter presented his bill for professional services, which amounted to 21*l.* the former refused to pay it.

Plaintiff said, in cross-examination, I supplied him with three plans and various pencil sketches. I have not made any specific charges for each drawing, but it is usual to charge 2½ per cent. on amount of contract. I have entries for twenty-four days on which I was consulted. I spent the most part of some of these days in consulting with small builders, as he was anxious to have it done very cheaply. He also consulted me on various other occasions about breaking agreements with different builders and contractors. I charged him much below my usual charges.

Mr. Thomas, architect, of Newport; Mr. Hartland, architect; and Mr. James, builder, supported the charge.

The counsel for the defence amused himself by abusing the plaintiff, and called the defendant, who said, I declined taking the plan, because it had no economy of ground. I found that I could myself design a plan by which a good deal of ground could be saved, and I employed no architect. I consider that five guineas is quite sufficient, and I have paid that sum into court.

Mr. Price, builder; Mr. D. Thomas, architect and builder; Mr. Bernard, the town surveyor; and Mr. Pritchard, architect, were examined on the part of the defendant.

The jury, after a brief consultation, returned a verdict for the plaintiff for the amount claimed, 21*l.*; and the foreman added, "We consider the amount charged very reasonable."

DOWNING-STREET IMPROVEMENTS.

The proposal of Government for taking down the present offices, and rebuilding them upon a large scale, appears to have had a check in the House of Commons. The grant is now confined to clearing a large plot of ground. The buildings are to be postponed until plans approved by Parliament are agreed upon. It is therefore to be hoped, that a fair competition for designs may be adopted, and that Sir Benjamin Hall will commence his reign by giving the profession a fair chance. By the proposal submitted to the House of Commons Committee, there appears but a very small plot appropriated to offices now planted out in various parts of town; and when it is known that 25,000*l.* are now paid for office rent, it surely is not too much to expect, that before accommodation for the entertainment of illustrious sovereigns is considered necessary, the enormous annual rental should be (if not altogether saved), at least, very greatly reduced. The observation of Lord Redesdale being so fully responded to by ministers in the House of Lords, let us hope, that this opportunity for an evidence of the skill and talent of the profession at large, will have its proper chance.

The necessity is now admitted on all sides, for not only rebuilding the present dangerous and dilapidated offices, but also for a great and comprehensive centralization; and if, instead of laying out 11,000*l.* in buying up the lease of Buckingham House, the present Ordnance-office had been sold, and accommodation in immediate connection with the War Department and Commander-in-Chief provided, an immense sum would have been realized in furtherance of a truly national structure. The estimated outlay is, or rather was, little short of 600,000*l.*; and when to that is added a sum necessary for the accommodation of all outlying departments, with their external structure, it is not too much to suppose an expenditure of three times the amount will be required. Surely this is a prize worth contending for, and one, from its position, that will not fail to enlist in competition the first talent of the country.

A. M.

COMPETITIONS.

Blandford Cemetery.—The designs of Mr. Wm. John Pinch, of London, for the chapels, and laying out the ground, have been selected.

Intended Cathedral at Lille.—The designs will not be required till March 1, 1856.

Newcastle-on-Tyne.—The design of Mr. W. Botterill, of Hull, has been selected in competition for the proposed new Orphan House Schools, Northumberland-street, Newcastle-on-Tyne.

Warwick.—We are informed that the premium of 10*l.* offered by Messrs. Roberts and H. Whittell, for the best design for laying out Copps'-yard, adjoining the Great Western Railway, for cottage residences, has been awarded to Mr. G. Punshon, assistant surveyor, of Leamington. These cottages are forty-five in number, and form a kind of square, in the centre of which there is to be a fountain, surrounded by shrubs and green sward.

THE ARCHITECTURAL MUSEUM.

It is intended to open a distinct list of subscriptions to the museum by artist workmen. They are to be entitled to all the benefits of the museum, as lectures, meetings, means of study, and reference. The annual subscription is to be five shillings per year, to commence from the 1st of January next. It is also intended to open the museum to art workmen on the Monday and Wednesday evenings in each week, as soon as arrangements can be made adequately for that purpose. These arrangements, it is hoped, will be completed by the first week in October. We may further mention, that the whole of Mr. Ruskin's valuable collection of casts from the Doge's Palace, Venice, and other places, is now in the museum, and in course of arrangement.

Notices of Books.

On the Smokeless Fire place, Chimney-valves, and other Means, old and new, of obtaining healthful Warmth and Ventilation. By NEIL ARNOTT, F.R.S. &c. London: Longman and Co. 1855.

DR. ARNOTT, having retired from professional life, is devoting his leisure to those useful and important inventive studies to which he has for many years given his attention. The present volume is the first fruits of that leisure. The particular subjects of which it treats are,—the smokeless fire,—the ventilation of ordinary dwellings,—warming in general,—the new self-regulating stove,—ventilation on a large scale, by pumps, fan-wheels, shafts, &c.—ventilating and warming by transfer of heat from used air passing away to fresh air entering,—giving moisture to air,—gas-lighting in houses,—and apparatus for churches, schools, hospitals, ships, &c. There is also an appendix containing reprints of reports and papers on various cognate subjects. The design of the whole is to make intelligible to popular apprehension the scientific principles concerned in the successful execution of all such undertakings as those to which it refers, and so to remove many prejudices, obstacles, and difficulties, and to benefit society at large. The explanations given are clear and simple, so that any intelligent person may be able to understand not only the action but the purpose of, and the benefit to be derived from, the various inventions described.

One of the most important of these inventions is the smokeless fire-grate. Dr. Arnott does not claim the general principle of this invention as anything new. A modification of it was invented some thirty years since, and known as Cutler's fire-grate. But even Mr. Cutler was not the originator of the idea, as Benjamin Franklin realized the same principle by means of a simple cage of iron bars, hung on pivots, and the empty space left in which by the waste of fuel he filled, after opening the top, and then wheeled round so that the cold fuel was below, and the blazing remainder was then above it, and consumed the smoke arising from the fuel as it heated. In Dr. Arnott's modification of the invention, an iron coal-box is affixed to the grate below the usual bars, with a false bottom or piston. This box is filled in the morning with a day's supply of fuel; and after the fire in the grate or within the bars is lighted and wasted, the coal in the box is lifted or pushed up by the false or moveable bottom, acted on by a common poker, thrust into one or other of a series of holes, in a piston rod with ratchet catches. The bars are higher up from the hearth than usual, but not from any mere necessity in the nature of the invention itself, but from preference and on principle, as better adapted to warm the room, carpet, &c. than the ordinary low modern grate. Air is recommended to be supplied mainly from a tube opening in the hearth so as to obviate draughts in front of the fire-place; and for the saving of heat as well as for the better management of the draught, &c. the fire-grate is covered by a hood, of brick, or iron faced with slate, and narrowing to a neck, with a regulating-valve in it, and accompanied by a blower, which descends, so as, if required, to cover the whole or any part of the small open front space above the bars. This narrowing hood is regarded by Dr. Arnott as a necessary adjunct to the efficient action of his well-known ventilating-valve inserted into chimneys just below the ceilings of rooms. These valves have not been found to act well on all occasions, and it is but fair to note that the inventor attributes their want of proper action to the absence of this hood, and sometimes to the way in which the valve is made, with hinges inside in place of out, and so liable to be choked up, and thus to fail in their proper action.

Dr Arnott adduces several striking instances of the benefit derived by families from the insertion of his ventilating valve, and hence the clearing of bed-rooms, parlours, &c. from foul air; and he remarks that the healthful appearance of children in crowded Irish hovels, can in many cases only be attributed to the fact that foul air so freely escapes through the usual hole in the roof for the egress of smoke; while, on the contrary, the low modern grates are even an aggravation of the previous defects in the ventilation of town dwellings, and but too apt to destroy the health of both young and old.

The author has proposed that the president of the Board of Health for the time being should cause to be nominated a commission of a few men representing medical, chemical, and engineering science, and acquainted with the subject generally, to examine what has been done in regard to the ventilation and warming of dwellings, &c. and to report thereon, and recommend

such improvements as may be suggested and may meet their approbation.

In one important respect, Dr. Arnott's present work well merits the public patronage. His inventions are not appropriated to his own self-interest by patent or otherwise. He has made a free gift of them to the public, and is perfectly disinterested in his advocacy of what he regards as improvements, except, of course, in respect to the interest which every inventor cannot but feel in favour of his own inventions. But that the public, too, will have their interest in such inventions not a little increased by the present popular exposition of sanitary principles and practice, we have not the least doubt.

Architectural Publication Society. 14A, Great Marlborough-street.

Part I. of the volume of Illustrations to the Dictionary of Architecture for 1854-5, contains contributions by Mr. G. R. Clarke, Mr. Mocatta (the bath-room in the Palazzo Pitti, at Florence), Mr. Hirst, Mr. Lockyer, Mr. Hansard, Mr. Horace Jones, Mr. Shout, Mr. Walton, and Mr. T. H. Lewis. Part V. of the Dictionary (1853-4) is in progress. There ought to be many more subscribers to this society than there are, and then the work would go on much more rapidly.

VARIORUM.

The *Freemasons' Monthly Magazine* (Routledge; and Spencer), commends itself to the Brethren, and should have their aid. Antiquarian matters very properly find a place in it. Although well conducted, there is still room for that improvement which the Masonic body outside could and should by their assistance produce.——The *Art-Journal* of the present month, contains, amongst a number of good papers, an interesting collection of French criticisms on the works of English art in the Paris Exhibition. Although the notices are for the most part ill-natured, it is evident that the French critics have found more to admire in the works of our artists than they expected. Some of the notices are very acute and discriminative, and all are very readable, as French criticism generally is.

Miscellanea.

International Archæological Conferences will be held in Paris, on the 25th and 26th of the present month. The subjects to be discussed are interesting.

City of London Cemetery. — The landscape gardener, to whom the laying out is intrusted by the commissioner, as mentioned in a paragraph in our columns of July 28th, is Mr. Davidson, of Great Russell-street, Bedford-square. We observe in our advertising columns, that notice is given of the day fixed for receiving tenders for the supply of trees and shrubs.

School of Art at Dunfermline.—"A Tourist," writing us from Dunfermline, informs us that a very successful endeavour has at length been made to establish a school of science and art in that city. The classes, he remarks, are already self-supporting, although the school has not been established more than eighteen months,—a fact which speaks well for the master, Mr. Leonard Baker, who, it appears, is in connection with the Government department of science and art. The inhabitants have expressed their approbation of his exertions, by erecting, at considerable expense, a commodious school building, which, notwithstanding a little disproportion, our correspondent remarks, does credit to the town, and to the subscribers to its erection. The black board system of teaching at the public schools, which has done much toward the generalization of taste, appears not to be carried out as it ought to be at Dunfermline. Out of a much greater number of schools, there are only three, our correspondent is informed, receiving this instruction.

Royal Academy Hangers.—I wish you would call the attention of the governing body at the Royal Academy to the manner in which pictures for the Exhibition appear to be treated by those who hang them. I have just received my works from the Academy, and there is not one of them whose frame is not more or less injured; and in one case, a large nail has been driven right *through* the wooden frame (a new one). Of course, artists must expect a certain amount of legitimate wear and tear, but they have surely a right to be protected from wanton carelessness.

An Exhibitor.

Royal Polytechnic Institution.—A bar of the metal aluminium has been presented to this active institution, by the Emperor of the French, at the request of Mr. Pepper, the able manager, who has been lecturing on the subject to interested audiences. The bar, we believe, may be seen by any one who visits the Polytechnic. There appear to be still doubts as to the possibility of its cheap production, notwithstanding the inexhaustible abundance of its oxide, alumine, or common clay. Cannot Mr. Pepper decide this question for us himself? We are not aware that there is any mystery about M. St. Claire Deville's mode of evolving it from the oxide.

American Patents.—The following are from the June number of the Journal of the Franklin Institute of Pennsylvania:—For an Improvement in Cast-Iron Pavement; George Neilson, assignor to self, and Nehemiah Hunt, Boston, Massachusetts. Claim—Making a paving block with a perimeter of thirty faces, and formed by sixteen hexagons or hexagonal prisms, disposed with respect to one another, the same enabling such block, where it abuts against a contiguous block when laid in a pavement, to be supported laterally by a semi-hexagonal projection and recesses.——For an Improvement in Drills for Artesian Wells; J. Andrews, Winchester, Mass. Claim—The use of a stiff chain, for the purpose of operating a rock drill, or other artesian borer. Also, the device for rotating the drill, consisting essentially of the cog wheel and pinion, with the parts which set them in motion. ——For an Improvement in Furnaces for Burning Wet Fuel; Moses Thompson, Henrico County, Virginia. Claim—The combination, for the purposes of a high degree of heat, of bogasse, refuse tan, saw-dust, and other refuse substances, or very wet and green wood, by the employment of a series of five chambers, arranged, in any manner, to communicate with one flue, when any number of the said chambers are nearly closed to the flue, and to the admission of air, when first charged, while the remaining chamber or chambers are in free communication with the flue, and have a free supply of air admitted, and each chamber in its turn is nearly closed and then opened, and has air admitted, whereby the heat required is furnished by the combustion of the fuel in one or more chambers, while the fuel in the other chamber or chambers is being heated and decomposed to a desirable degree, no artificial blast being used.

A Cottager's Sun Dial.—Nail a round, thick, well-seasoned board, about eight or ten inches in diameter, level on the top of a post, so that water will not be inclined to run off one way more than another, and cover it with paint, zinc, tin, or lead, as you please. Then, with a pair of sharp-pointed compasses, draw a large circle nearly to the extent of the board, in the centre of which stick a common pin, and in the morning, when the sun throws the shadows of the pin's head just to touch the circle, make there a small mark; so, also, in the afternoon, when the shadow of the pin's head touches the same circle, make another mark, and from these two marks draw a straight line, and then another line perfectly square across it: this will be the true north and south of your dial. The next thing will be to find the shape of your guomon. Divide the large circle (which represents the circumference of our globe of 360 degrees) into twelve equal parts, containing 30 degrees each; then set your sharp-pointed compasses so as to make thirty points in that space of 30 degrees. The next thing to be considered is the degree of north latitude, where the dial is to be placed; and with your compasses thus set, make just that number of points or spaces on the circle from the north, and from the last point or space draw a straight line to the centre of your circle, which will be the true slope of your gnomon. When fixed I should recommend you from twelve o'clock to mark out the hours by a well-regulated watch or timepiece, and your dial is complete.—*Worcester Herald.*

Boxes of Bricks.—For beginners in architecture, these scientific toys would be very useful, as machinery could readily make them to great nicety, including capitals of columns, mouldings, parts of arches, &c. If made of hard wood, a little stiff gum arabic and water would connect those parts requiring support, as arch-pieces. They could be readily broken asunder, and by merely wetting would join again. This is worth a thought at Marlborough House. My little boy has a bad box of bricks, and a few experiments with them convince me of the great value for school, and more advanced purposes, of the bricks. They can be made cheaply and yet accurately, can be put together rapidly, and while with a drawing we have to rub out, rule afresh, &c. &c. and only get a one-sided view of a building, with bricks we discover many points of view at once; and if the model falls down, a learner of quick thought discovers something. I am sure some of our architects would see the force of this if they had boxes of bricks of the right sort made, and tried their capabilities.—W. R.

Masters and Foremen.—*Clarke* v. *Earle*, v. *Dowson and Co.*—In the Southwark County Court, from the plaintiff's statement, it appeared that he had been engaged by the defendant as clerk of works, to superintend the erection of an extensive saw-mill. The firm at the same time wishing to carry out other works without the aid of a builder, instructed the plaintiff to employ men for that purpose, and by the desire of the defendant, men were employed at night as well as in the day: a portion of the work being in the Thames, could not be done otherwise than as tide-work, the extra time thus given by plaintiff, amounted, in thirteen months, to sixty-two days, according to the time paid to the workmen, and for which plaintiff had not made any charge during the progress of the works, in consequence, as he said, of a promise held out that any extra exertions would be rewarded. After thirteen months' labour, without any sign of a reward, plaintiff gave a month's notice, and left the firm, at the same time applying for the wages that he considered due to him. The defendant refusing to acknowledge the claim, or to make any compensation, a summons was taken out against him. It was admitted that it was not usual for foremen or clerks of works to charge for overtime, and the judge directed a nonsuit against the plaintiff.—A. B.

Tenders.—Builders have their singularities like other men, and among them is the not particularly rare one of giving tenders without any intention of abiding by them. I have observed this frequently in cases where the quantities are supplied, the idea, with men who have not a leading reputation, seeming to be, that by appearing in the lists with those who have such reputation, they gain an apparent standing in advance upon their real position, and no doubt the publication of the lists encourages this practice. It is easy to price the quantities so as to ensure the not getting the job, and then all goes right; but if it happens that one of these lesser builders be lowest, and the tender be accepted, he is obliged to decline carrying out the work, to the great inconvenience of the architect and his employer. Causes, besides that of inability, may sometimes arise for not carrying out the work of an accepted tender; and when they are reasonable, and are at once openly stated, the grievance must be borne, but the system above alluded to should be discouraged. The tenders reported in the *Builder*, for additions to the South Metropolitan Schools, are illustrations of these remarks, the lowest tender having been accepted, and the tenderers soon afterwards excusing themselves, on the ground of being too busy to execute the work, upon which it became necessary to apply to the next, who being of the capable sort, were willing to keep to their tender, and signed the contract; but it is not always that the dilemma is so easily overcome.—N.

Testimonials to Workmen.—It has often occurred to me (having much to do where bricklayers and their labourers are employed), that it would tend to raise the character of such men, and place the sober and well-disposed workman on vantage-ground, if their employers, generally, were to require some written testimonial from previous employers, as to the habits and conduct of workmen offering their services. At present, for example, the willing and sober bricklayer may have a drunken labourer, and, at a moment, when despatch may be required, the latter leaves his fellow-workman on some drunken spree, as it is termed, and thus compels the bricklayer to be idle and causes serious interruption to the works: and, *vice versâ*. I see no difficulty in the way of carrying out,—to some beneficial extent at least—an alteration in the present way of engaging workmen -not omitting groundmen or excavators.—A Builder's Clerk.

Inauguration of the Statue of Dalton, at Manchester.—On Thursday before last, the bronze statue of Dalton was inaugurated. The statue is of bronze, and executed by Mr. William Theed, R.A. It has been placed on an angle pedestal in the parapet wall separating the public esplanade from the grounds of the infirmary. The cost of the monument in the Ardwick cemetery was 1257.; about 4,1377. were appropriated to the Dalton Scholarships and Prize; and the bronze statue has cost about 900/. The statue is about 3 feet larger than the marble one by Chantrey in the Royal Institution. If, instead of being seated, the statue was upright, Chantrey's would be between 6 and 7 feet in height; Theed's full 10 feet high,—so that in scale it is heroic.

Street Decorations at Carlisle.—Mr Clarke, of Gloucester, is said to have given satisfaction by the designs for arches, &c. with which Carlisle was decorated on the occasion of the meeting of the Royal Agricultural Society in that city. Amongst the chief decorations were three lofty arches, dedicated respectively to England, Scotland, and Ireland, and a Gothic arch of 60 feet in height, in Scotch-street. The materials were merely poles and strips of wood, evergreens and coloured calico, and the whole was got up in five days.

St. Peter's Church, Walworth.—The tenders for repairs here, under Mr. Jarvis, architect, ranged from 520*l.* to 199*l.* Mr. Thornhill's tender' 284*l.* 19s. was accepted.

The Workmen at Shorncliffe.—We regret to hear that at the works at Shorncliffe for the reception of the foreign legion, the conduct of some of our workmen offers a very disparaging contrast with that of the foreign soldiers, of whose presence John Bull, true to his prejudices, was so apprehensive. Some of the former, we are told, have proved a plague and scandal to the neighbourhood: the latter are orderly, decorous, and even gentlemanly in their bearing. There are upwards of 1,500 already encamped there, and not a single complaint against any one of them has yet been brought before the authorities. They are chiefly from the northern parts of Europe—Finns, Swedes, Danes, Holsteiners, &c.

Accidents.—At Brentford, on Tuesday evening before last, a fatal accident occurred at the Royal Brewery, owing to the fall of a portion of a wall, enclosing a piece of waste ground. Outside the wall an alley runs down to the Thames, and of five or six children who were playing there, two were killed. A third was buried, but crawled out uninjured. The accident was caused by the fall of some recently-built arches which rested against the wall.——At Halifax, a portion of a wall, about 30 yards long and nearly 40 feet high, on the newly-erected shed of Messrs. Robert Crossley and Co. carpet manufacturers, Albion Mills, fell on Sunday morning before last. The loss cannot be much less, it is said, than 3,000*l.* A flood is blamed as the immediate cause of the accident.

Yorkshire Architectural Society.—A meeting of this society will be held in the Town-hall, Pontefract, on Tuesday, the 28th inst. at noon, when several papers will be read, including one on the Priory of St. Oswald, at Nostel, by the Rev. R. E. Batty, incumbent of Wragby; and another on Ackworth Church, by Mr J. W Hugall, architect Previous to the meeting the members of the society will view the various objects of antiquarian interest in Pontefract, and after the meeting the church at Birkin. On the following day they will proceed to inspect the remains of the priory at Nostel, the churches of Wragby, Ackworth, Darrington, &c.

The projected Tunnel Railway in the British Channel.—Mr. Morris, the projector of a cast-iron tunnel railway from Dover to Calais, it appears, first proposed such a tunnel to cross the river Tamar, in Cornwall, so far back as 1841. His idea is, that by forming a cast-iron tunnel, the railway could be simply laid down on the surface of the Channel without any actual tunnelling, and he trusts to the cast-iron tunnel itself being strong enough, in such a position, in the midst of sea water, and at such a depth, to span any local ravine that might lie in the way. No diving, he remarks, would be necessary in the laying down of the tunnel, as he proposes to effect this by a method originating with himself. Stationary engines, he suggests, could be erected at every five miles apart, to propel by Clegg's system, if not by locomotive throughout. The leakage and ventilation, he adds, would be effected by motive power.

Tavistock square.—Will you pardon my intruding upon the subject so well treated of lately—the interest of our squares. You mention Mr. Perry's house, which stands round the corner of Tavistock-square, between it and Burton-crescent. One point of interest you have omitted: next door to *the* novelist of the age (only second to him who will never be surpassed—Dickens), resides at present the accomplished author of "Ten Thousand a Year,"—a pleasing juxtaposition of kindred minds! Mr. P.'s house, by the way, is not what I remember it when a child—enclosed in its own walls, and with ever-open hall-door, and almost surrounded on three sides by a fine sunny ground. It is now four houses, by the remodelling and extending the old. And I am not quite certain but Mr. C. D. *does* occupy the *very* part once illustrated by the presence of our greatest Whig statesmen. I think an eminent solicitor, Mr. Curdale, is *its* occupier; but I will not *absolutely* affirm it. Mr. Perry's grounds at the back meet Mr. Baily's: in the latter house still resides the sister of an eminent brother, and herself, I think, not unaccomplished in the same elevated science. Close by, in Bedford-place, the learned and modest and esteemed scholar, Dr. Roget,* is still engaged in assisting to make the path more easy for future writers by a late work, in which he has stepped a little out of his ordinary path to facilitate the labours of those in every path. This being the locality, though not of my birth, yet of all my life beside, I could lengthen out this letter to an extent that would, perhaps, be tedious.—J. A. G.

*** The article in question did not pretend to mention all the eminent men *now* living in the squares.

* Nephew of Sir S. Romilly.

The Carvings in Bedminster New Church, Bristol.—This church remains unconsecrated. The bishop, without *directing* the removal of the sculptured screen at the east end of the chancel, requests "earnestly and affectionately" that it may be taken away. The churchwarden, on the part of those who gave the screen, declines to act, unless, by the bishop's "positive command." The bishop says in his letter,—

"The complainants refer to—first, 'a very prominent crucifix immediately above the place for the Communion Table;' secondly, 'a fantastic representation of our Lord's Nativity, with winged minstrels on the roof of the stable; groups of figures elaborately decked with the well-known appendages of Romish superstition, not excepting the symbol of the Papal supremacy;' and, thirdly, 'a Credence-table.' It appears that there is introduced into the chancel behind the Communion-table a richly-sculptured screen, called a *reredos*, representing in relief three great events in the Gospel history—the Nativity, the Crucifixion, and the Ascension. The figure of our Saviour upon the Cross, being in the centre of the middle compartment is of course prominent, but ought not to be confounded with the crucifix as it is used by Romanists, and was excluded from our churches at the Reformation. An image which is blended in an historical representation of our Lord's suffering seems unlikely ever to be regarded as an object of idolatrous worship. Upon the other parts of this screen, described to be a beautiful work of art, I shall not dwell. The complaint respecting the 'Emblem of the Papal Supremacy,' if it is intended to apply to the designation of St. Peter among the Apostles, by the keys, is unsubstantial, the evident reference being to a well-known passage in the Gospel narrative. The sculptured representation of the Heavenly Host at the Nativity, the omission of figures which we know to have been present in the real scene of the Crucifixion, and the insertion of a person, at the Ascension, in addition to the Eleven Apostles (supposed to be intended for the Virgin Mary), all prove that the artist considered himself entitled to exercise the common license of painters and poets, and to embellish historical representations from his own fancy. For this, among other reasons, I cannot admit the danger of these carved figures ever becoming objects of adoration. Being now called upon for my opinion, I must express an objection, on the score both of taste and propriety, to the introduction of the figures of the four Evangelists between the compartments of a representation which varies in any degree from the truth and simplicity of their narrative. Again, it must not be omitted as a material objection to the proposed decoration, that it occupies the space at the east end of the church, where it has been the general practice to place the Lord's Prayer, the Creed, and the Ten Commandments, the last of which are ordered by the Canons to be legibly exhibited in this part of the fabric. * * * It is scarcely worth naming the mistake respecting the Credence table. There is no such piece of furniture: there is an aperture in the wall intended to serve as a shelf to deposit the elements before they are placed upon the Lord's Table; a provision of obvious convenience, and exposed to no objection which I can comprehend."

Railway Matters.—A Board of Trade report states, that during the year 1854, the expenditure of the Great Western, including the Shrewsbury and Birmingham, and the Shrewsbury and Chester, was 1,266*l.* per mile, and the receipts, 3,302*l.* per mile. London and North-Western, expenditure, 2,004*l.* receipts, 5,001*l.*; Oxford, Worcester, and Wolverhampton, expenditure, 240*l.* receipts, 1,741*l.* The total expenditure on these lines was as follows:—Great Western, 733,679*l.* exclusive of rent to Gloucester and Dean Forest, and Wycombe Railways; London and North-Western, 1,684,712*l.*; Oxford, Worcester, and Wolverhampton, 118,685*l.* exclusive of 2,537*l.* for the rent of Stratford and Moreton Railway.——The total amount received for traffic on the London and North-Western, for the week ending July 22, was 57,646*l.* (corresponding week in 1854, 59,855*l.*); Midland and Bristol and Birmingham, for same week, 28,276*l.* (corresponding week in 1854, 29,864*l.*); Great Western, 27,677*l.* (corresponding week in 1854, 24,800*l.*); Great Northern, week ending July 15, 19,622*l.* (corresponding week in 1854, 18,489*l.*) ——The English railway revenue for week before last amounted to 111,117*l.* 10s. acquired on 7,165 miles, and equalling 57*l.* 7s. 6*d.* per mile. For the corresponding period last year the income was 396,573*l.* on 7,053¾ miles, or 56*l.* 4s. 4½*d.* per mile. The increase in favour of this year is thus 1*l.* 3s. 2½*d.* per mile.

Importance of Ventilation and Drainage: Seeds of a New and Deadly Disease.—A singular instance of evil resultant from contamination of the air of places ill ventilated and undrained has just occurred at Stephen's-mews, Rathbone-place, Oxford-street. A horse, belonging to one "Jemmy Massey, the well-known pugilist," had glanders how originated is not stated; but the horse was kept in an undrained and ill-ventilated stable, over which Massey and his wife lived. The latter, *although she never had anything to do with her husband's horses*, was smitten with glanders; and after suffering all the horrors of this dreadful disease, has recently died of it in Middlesex Hospital. Had this poor woman been allowed to remain in the unwholesome locality where she was seized, those attending her might have also suffered, and in this way a new plague might have been introduced amongst human beings, in consequence of this single instance of the neglect of sanitary laws: and once established by a succession of victims, it is hard to say, in a populous district reeking with stagnant sewers and filthy streams, such as the metropolis is, where or when so horrible a visitation might have ended. How urgent such an instance ought to make one and all of us to force on the drainage question to a final and satisfactory issue! Here is an evil still more dreadful even than the virulent cholera and typhus, with which we now seem to stand in peril of being afflicted. Was it not thus the scarcely less loathsome and deadly small-pox originated amongst human beings? There was a time when it, too, was only a bestial evil. No sooner had it established itself as a human disease, however, than it was fostered in filth, close dwellings, and ill-drained towns, and at length became a scourge to the whole human race. God forbid that so strange and evil an omen as the occurrence of glanders in a human being without contagious communication with the beast afflicted with it, should be denotive of the like beginnings of a human plague ten-fold more loathsome even than small-pox. Nothing but thorough drainage and ventilation, it may be, can secure us against so terrible an affliction, now that it has shown itself capable of making so ominous a beginning, as a strictly human scourge, transmissible by mere infectious contamination of the atmosphere in foul localities.

Mechanical Inventions.—In the Commons, on Friday week, Mr. Ewart asked the Clerk of the Ordnance whether satisfactory progress continued to be made in the inventions laid before the select committee, with a view to shortening the duration of the war. Mr. Monsell, in reply, stated that 974 inventions had been laid before the committee, of which 696 had been rejected, and the remainder were under consideration: many of great importance were being carried into effect.

The Byzantine and Mediæval Courts.—On the principle "*palmam qui meruit ferat*," I cannot help expressing my regret that you should have published, in the last number of the *Builder*, without any corrective comment, a paper by Mr. R. P. Pullan "On Polychrome," by which the impression is produced (though I trust unintentionally) that the decorations of the Byzantine and Mediæval Courts were *designed* by Mr. Pullan; whereas, as you must be aware, the merit of that work is due to the talent and research of Mr. Digby Wyatt, from whose original sketches a large proportion of the decorations were carried out. I am certain that Mr. Wyatt (who is at this moment from England) fully appreciated and acknowledged the value of Mr. Pullan's assistance in this work, and I therefore regret the more that Mr. Pullan should have entirely omitted Mr. Wyatt's name in the paper alluded to. I trust you will correct the false impression produced, by a few words in your next number.—C. F. Jun.

TENDERS

For the Greenwich Cemetery. Mr. S. Hewett, architect. Quantities furnished:—

Thompson	4,830 0 0

[ADVERTISEMENT]

Burglars Defeated.—Chubb's Gunpowder-proof Safes.

"9, Cousin-lane, Upper Thames-street,
London, July 6, 1855.

"Gentlemen,—The safe you fixed here some years ago has indeed proved a good one, and done good service. Last week some thieves broke into our office, and tried their hands upon it. First they seem to have used their crowbars, and then gunpowder, but both proved vain; for money, bills, and deeds were all safe enough in your 'safe,' and under your lock and key. We have great pleasure in informing you of this, of which you can make any use you please. — We are, gentlemen, your obedient servants, — James Nicholson and Co.

"Messrs. Chubb and Son, 57, St. Paul's-churchyard"

Chubb and Son, 57, St Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

TO CORRESPONDENTS.

"A Young Surveyor" we cannot pretend to advise. Get a good introduction or two from those who know your competency, and show yourself prompt, energetic, and trustworthy. Instead of "filling your time," make it "G W" (about it at the point of some person in whom confidence will be placed).—"Subscriber" (the fold no rests with the newsvendor. "A A" "C mpetitor" (such charges forwarded anonymously cannot receive any attention).—"A. L." "J. K. jun."—"S. E." "H. L."—"W. D." "E. M. B."—"H. A. L."—"P. H." (a note on the subject was in type and appears in the present number).—"G B." (plan of the "Gore House property" was given in our pages long since).—"J. L." —"T. L."—"M. D." "W. H."—"H. J. N."—"B. L. jun."—"W. D."—"R. F."—"G S."—"P. B. L."—"R. P. W. R."—"C W."—"C P." (should you not direct to the district surveyor if what he considers wrong?)—"E K." (the 80 to arch may be built in mortar if desired.—"T L. D."

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

WANTED, by a practical Man, a Situation as SHOP FOREMAN. Can get a rising of 40 acres. Has had a light shop fitting. Direct to B. These orders preferred.—Address, A. B. Broadbury chambers, George-street, Blackburn, Lancashire.

TO MACHINISTS, MILLWRIGHTS, AND AGRICULTURAL IMPLEMENT MAKERS.

WANTED, by a respectable Young Man, a SITUATION as WOODMAN to the above branches. Can work at the Lathe and Vice as well as a knowledge of pattern making.—Satisfactory references can be given.—Address, D. F. 7, Carter-street, Walworth-road, London.

TO IRONMONGERS, BUILDERS, AND OTHERS

THE Advertiser is in want of a RE-ENGAGEMENT. He has been foreman in a manufacturing ironmonger's many years; used to all kinds of bath work hot water, and steam apparatus; fire proof locks, &c. References can be given.—Address, A. Z. 28, Lee-street, Kingsland.

TO SURVEYORS, BUILDERS &c.

THE Advertiser, who is about leaving his present situation, where he has had the management of a Builder's shop, is desirous of a RE-ENGAGEMENT. He is thoroughly qualified to work by sketches, setting out quantities, preparing bills, and generally to assist a good draughtsman, or material to prepare finished working, detail, and perspective drawings, write specifications, &c. The highest references and testimonials.—Address, NIL DESPERANDUM, 4 Cornwall-road, Clapham-park

TO LOCAL BOARDS OF HEALTH, ENGINEERS, AND CONTRACTORS.

THE Advertiser, having completed the superintendence of large drainage and water works, is open to an ENGAGEMENT. Is a good draughtsman, and has had considerable experience in town Surveys for the purpose of sanitary improvements. Testimonials. Salary moderate.—Address, S. S. 22 Coal-street, London.

TO BUILDERS AND OTHERS.—Perseverance, combined with strict attention to business

THE Advertiser, a Young Man, is desirous of obtaining a SITUATION. He will devote his time with unceasing water fulness and fidelity to the interest of his employers; he has been in business to a large extent in the country. Having had a good home education, he would well-kindly make himself useful to the best of his abilities, either in the office or shop; he can write a good hand, and will make the object to be brought of the world for any company requiring a person of honesty, sobriety, and full confidence. First rate references. Address, ERNEST R. Office of "The Builder."

TO HOUSE PROPRIETORS AND OTHERS

THE Advertiser is fully competent to undertake the MANAGEMENT of REPAIRS in all its branches having filled a situation for several years in one office.—Address A. Z. 22, Henrietta-square, Brunswick-square.

FURNITURE DESIGNING, &c.—A DRAUGHT-MAN, qualified to make miniature and working drawings for furniture &c. may probably hear of EMPLOYMENT by addressing a letter stating experience terms, &c. to B. A. C. 9, 7, Stamford Man-hester. Also,

A FRET CUTTER WANTED; a Young Man or Youth, accustomed to fret cutting.—Address as above, stating wages, &c.

TO BUILDERS

A GENTLEMAN, aged 30, wishes to be RECEIVED as an ARTICLED PUPIL in some London or provincial knowledge of the business for which he will be happy to make himself generally useful. Can draw a plan to scale, color freely, and calculate correctly. First-class references as to respectability.—Address, O. Y. care of Mr. Todd, Baker, Watermore, Bucks, Cirencester.

TO ARCHITECTS

A DRAUGHTSMAN of great experience is open to an ENGAGEMENT as an ASSISTANT in an Architect's Office.—Address, G. G. 56, Michael's-place, Brompton.

TO CIVIL ENGINEERS, LANDOWNERS, ESTATE AGENTS, AND SURVEYORS.

A SURVEYOR, who has had considerable experience in very extensive parish, railway, and mining surveys, and in taking parliamentary and compass sections, staking out, superintending, measuring and estimating every description of railway work, bridge drawing, and agency accounts, is desirous of an ENGAGEMENT, or will be glad to enter into partnership with an Estate Agent and Surveyor, who requires energetic assistance. Testimonials and references satisfactory.—Address, A. B. care of Mr. SHERWOOD, Solicitor, Alderby Villa, Leamington.

TO BUILDERS AND CONTRACTORS.

A YOUNG MAN of good education, who has completed his Articles at the bench, and is in general knowledge of the building business and accounts, wishes for a SITUATION in the Office of a large firm in town.—Address, W. W. 9, Lawn place, South Lambeth.

TO ARCHITECTS, SURVEYORS, BUILDERS, &c.

A RESPECTABLE persevering Young Man, is OPEN to an ENGAGEMENT with either of the above. Has been in the profession seven years, and can give unexceptionable references. To any person requiring a general and confidential assistant, the Advertiser would be found most useful.—Address, L. H. P. stoffice, King William street, City

TO BRICKMAKERS, BUILDERS, AND OTHERS.

A PRACTICAL BRICKMAKER, having nearly completed his engagement, wishes a RE-ENGAGEMENT, contract or otherwise, having had from thirty to forty years' practice, and can be well recommended. Direct to D. H. and SON, at Mr. A. Beckett's, Copenhagen, Bickfield, near the New Cattle Market, Islington. Son no objection to foreign service.

TO BUILDERS

A THOROUGHLY-EXPERIENCED SHOP FOREMAN wishes a RE-ENGAGEMENT. He has had five years' experience as out-door foreman; would engage either. Can be recommended by one of the leading building firms in London.—Address, Mr. CHARLES WRIGHT, 38, Great Marylebone-street, Portland place, London.

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN of industrious and steady habits wishes to meet with a SITUATION in any locality. Salary not so much an object as a permanency.—Address, for initials, to DELTA, 70, Huntingdon-street, Barnsbury park, Islington

TO ARCHITECTS ONLY.

AS CLERK of WORKS.—The Advertiser, fully qualified, is desirous of a RE-ENGAGEMENT, either in town or country. Can give good references.—Address, E. F. A. Mr. Cooper's, Post-office, Oxford-street, Rosemary-lane.

TO ENGINEERS, PORTABLE ENGINE MAKERS, &c.

A THOROUGH practical ENGINEER, well acquainted with all kinds of stationary and portable enginet, is desirous of obtaining a SITUATION as FOREMAN, in town or country. Can make working drawings.—Address, W. B. 9, Victoria-street, Bury St. Edmunds, Suffolk.

TO ARCHITECTS.

A GENTLEMAN of great general experience would be happy to take the MANAGEMENT in the office of an established Architect, with the prospect of eventually joining the establishment as a partner.—Country preferred.—Address, A. Z. Office of "The Builder."

TO BRICKLAYERS AND BUILDERS

A STEADY, respectable Young Man, of temperate habits, and low wages, is willing to APPLY HIMSELF to either of the above for three years. He can be highly recommended, and has a good standing character.—Address, to J. COSPORD, 5a, Bedford-square, Fenchurch-street, London.

A COMPETENT ASSISTANT wishes for an ENGAGEMENT. Terms moderate.—Apply to X. Y. Z. Mr. Arnold's, No 9, Castle-terrace, Gravesend.

TO CARPENTERS AND SASH-MAKERS.

WANTED, a PARTNER to join the Advertiser in the above business, which has been established thirty years. For particulars address to Messrs. JAMES PHILLIPS and CO. 116, Bishopsgate-street Without.

TO ENGINEERS, BRASS-FOUNDERS, MACHINISTS, &c.—The PATENT RIGHT of a LUBRICATOR, adapted for steam cylinders, &c. TO BE DISPOSED OF, on a long or short period. Particulars may be had on application, by letter, to A. B. care of F. Haines and Co. 22, Limestreet, City. Full-sized models of the above are to be seen in the Gallery of Inventions, Crystal Palace, Sydenham.

TO GASFITTERS AND OTHERS.—ISLINGTON.—TO BE DISPOSED OF, the GOOD WILL, TRADE and old-established BUSINESS in the Upper-street, in which the principal trade in the parish has been successfully carried on by the present proprietor for the last five years, who is retiring.—Apply to Mr. NEWMAN, Auctioneer and Valuer, 8, Churches-row, Upper-street, Islington opposite Theberton-street.

TO CARPENTERS AND JOINERS.

ALTERATIONS to WORKSHOP for a Pianoforte Maker are wanted. Any person in the above requiring a first rate pianoforte, that can take one in part payment will find this a favourable opportunity. Good references can be given.—Address, J. LEG 7, 40, Robert-street, Hampstead-road.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA COTTA to M. H. BLANCHARD, late of Cook's Original Works, and successor to them in the Establishment of that double interest, that has been successfully adopted for nearly a century in this country, by our eminent artists and others, in the adornment of our noblest buildings. Groups, statues, Vases, Fountains, and Architectural Embellishments, at prices of quality that will defy competition, and will be found to be a different material to that now being used by public and private parties, only three years of our experience, and without practical knowledge. Some of the works recently completed by M. H. Blanchard are referred to, viz.—Those of the Embankments of the external part of Chiden House, his grace the Duke of Sathe land's; also Tottenham and King-land Churches, the turrets to the Camden and Canonbury Mansions, Upper and Lower Holloway; Broad-sad Brewhouse, Hertfordshire; County Fire Offices, Cornhill; and Lombard-street; the Arms with the allegorical groups, at the Kent Victoria Dispensary, Gravesend; and other works elsewhere, too numerous to mention. A large Stock of newly designed Chimney Shafts and Pots to suit the various style of buildings, at very low prices, and worthy of notice.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazzas, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West Indies Docks Station, and also at No. 1, Pratt-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Musical Court. The statues of Australia, Victoria of Wedlock, and the colossal Lions in the grand centre staircase, are Terra-cotta, as are the fountains at the Renaissance Court and the roof of the alhambra Court. The Pompeian roofs of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THIS PAINT POSSESSES IN AN EMINENT DEGREE THE FOLLOWING ADVANTAGES OVER ALL OTHER KNOWN PIGMENTS:—

INDESTRUCTIBILITY BY HEAT -PRESERVATION OF IRON FROM OXIDATION, WOOD FROM DECAY, AND MASONRY AND BRICKWORK FROM DAMPNESS—PERMANENCE OF COLOUR AND FREEDOM FROM DELETERIOUS PROPERTIES—SUPERIORITY OF BODY.

The Protoxide Paint, as at present produced, is of one shade of colour, viz: a pale drab, but it may be tinted with any other colour to suit the taste and purpose for which it may be required. It is not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind, and is therefore well adapted for the interior of ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.

SOLE AUTHORISED AGENTS FOR ENGLAND,

MESSRS. C. GRABHAM and CO. 4, BARGE-YARD, BUCKLERSBURY, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' col ic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil, also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped -HUBBUCK LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A newly-plastered room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in use market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Blastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c. — J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement out of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by H. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly exceeds them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from Mr. Blake. JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent. KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent, and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs. Fire-bricks, Cornices, Cement Chimney-pots, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour resembling the Bath stone. CHARLES RICHARDSON, 6 South Wharf, Paddington.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality manufactured on the above works. Also STOCK and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

SOUTHAM BLUE LIAS LIME and PORTLAND CEMENT WORKS.—OLDHAM and TATHAM are now prepared to receive orders from Contractors, Builders, and merchants for Ground and Lump Blue Lias Lime, also for Portland Cement and Lias and Bath Cement, both of which will be found of very superior quality, and will be improved by the addition of two or more parts of sand to one of cement. 10. and T.'s boats can run alongside any wharf or works, and all orders addressed to Warwick will receive prompt attention Office, Warwick

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

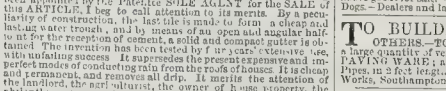
Wouldham hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement The shell lime for mortar is burned on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS, STOCKS, and other BRICKS.



CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 26, 1855.—CHARLES RICHARDSON begs to inform his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

BLUE LIAS LIME.—J. EASTWOOD and SONS take this opportunity of informing their customers that they have now BLUE LIAS LIME always in stock, ready for delivery, at Belvidere road, Lambeth

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and RENGOUGH, Manufacturers.—Office, 4, George yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures Sole agent, J. B. LAWES, 10, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and instant water trough, and by means of an open and angular half-pipe for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the retail publican, the owner of house property, the philanthropist, and the coal merchant. Delivered free on rail or canal, at the works, Velvet-dit, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d per Tile, of about 13 inches long. Stop-ends and Outlets, 6d

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Corridors, Balconies, &c.; Antique, Geometrical, and Alhambra Mosaics, manufactories of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Mural Tiles for Dados, Panels, and Kitchen Ranges, may be had in great variety at their Warehouse, 5, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade name, "TERRO-METALLIC," is the exclusive right of the Proprietor, and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 30s. per 1,000; floor bricks and 6-inch pavings, at 40s. per 1,000; 8-inch pavings at 60s. per 1,000; 9-inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

DUTCH CLINKERS, 32s. per thousand, by the best Makers

WELSH, STOURBRIDGE, AND NEWCASTLE FIRE-BRICKS, LUMPS, AND TILES, at much less than cost prices; will be SOLD by PRIVATE CONTRACT. The BUSINESS to be DISPOSED OF, with the valuable connection, and a portion of the PREMISES to carry on the same, TO BE LET, at almost a nominal rent.—For particulars inquire on the premises, Honduras Wharf, Bankside, Southwark, London.

BRICKS.—Excellent hard-burnt RED BRICKS, of deep colour and perfect shape, 25s. per 1,000, cash, delivered into the railway trucks or carts. Stocks, malms, seconds, place, &c. at low prices; cutters, footlers, snub, and other fancy bricks to order. Agricultural draining tiles.—Address, Mr. LEVETT, at the Railway Brick and Tile Works, Brentwood, Essex, where a large stock may be inspected.

N.B.—The Works adjoin the Goods Station of the Eastern Counties Railway, at Brentwood.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and flare, bricks fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Ribs at Bow-bridge, Stratford, E. or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE, BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants, Builders, contractors, and others supplied with every description of building material at the lowest market prices.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 28s. per thousand; Grizzles, 32s.; Rough Stocks, 32s.; Place, 36s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests a purchaser to favour him with a visit, in order to inspect his stock, and to judge for himself of its merits.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS.

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE, 5, ADELAIDE-PLACE, London bridge.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c Stourbridge fire-goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 29, Nelson square, Blackfriars-road.

BRICKS.—Builders wanting Bricks of good colour, are solicited to call on H. PARKS, Lewisham, and see the quality at low prices. Carriage within six miles on the most reasonable terms. Red facing bricks at 32s. All kinds of tiles, paving bricks for oven building, salt glazed stone pipes manufactured, also all kinds of red pipes and pots.—Application by letter punctually attended to.

FOR IMMEDIATE SALE.—FIRE BRICKS, LUMPS, TILE, and TERRA COTTA.—SAMUEL TRICKETT has received a large consignment of the above goods for sale.—Apply on the premises, Stone-wharf, Isle of Dogs.—Dealers and large consumers liberally dealt with.

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, at very low prices, a large quantity of very hard BUILDING BRICKS, TILES, and PAVING WARE; also, 3, 4, 6, 8, 9, and 12 inch red Socket Drain Pipes 2 feet length.—Apply to St. JOHN HEWITT, Redhill Works, Southampton.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

TO BUILDERS or PHOTOGRAPHERS.—TO BE DISPOSED OF, the SASHES covering a room lately occupied by one of the first photographers. They are about 6 feet by 5 feet 6 in. with iron moulded bars, balance ventilating compartments, &c &c. and will be sold a great bargain.—Apply at 231, Regent-street.

CLAY ARCHITECTURE.—To NOBLEMEN, ARCHITECTS, BUILDERS, and OTHERS.—A PATENT has been taken out by JOSEPH ARNOLD, Tamworth, the Brick and Tile Manufacturer, for producing ORNAMENTAL BRICKS, of any pattern whatever, on a raised ground, with the same accuracy as a seal upon wax. By this novel invention the patterns is made with the brick, the clay is prepared by steam power, which produces, when burnt, an imperishable article, ornamental window heads and sills, large bricks for panelling, and facings chamfered, ogeaned, or in zig zags, grape and vine, Elizabethan, or any other pattern. The patentee can make them blue, red, or strawberry colour. His large paving bricks, 9 by 9 inches, and 3 inches thick, on a depressed Roman pattern, to prevent slipping, and carry off the rains, only require being seen to supersede the flagging now in use, being imperishable. For the foundations of large public buildings, bridges, Government offices, bricks are made 18 by 6 inches, 6 inches thick, weighing nearly 50 lbs of this superior material. The time has now arrived when the exterior of our public and private buildings may equal, if not exceed the interior decorations in the hands of architects, as there is no limit to design. Specimens of these articles may be seen in the Inventor's Gallery, Crystal Palace, Sydenham; or at his Metal of Earth Works on the Watling-street road, Wilnecott, within three minutes' walk of Wilnecote station, on the Midland Railway, and two miles from Tamworth Station, Trent Valley line.—Church-street, Tamworth, August 8, 1855.

METALLIC PROTOXIDE PAINT.—This Paint has been in extensive use and severely tested on the Great Western, North and South Western, Midland, York and North Midland, and other railways; the new Houses of Parliament, British Museum, Lock Hospital, and West India Docks, &c. The Protoxide Paint unites most intimately with iron, preventing oxidation, and rendering it equal to galvanized. It is of great value when applied to the interior of steam and water pipes, and their joints, and for coating the inside of sugar moulds. It is not affected by foul air or gas of any kind, and dwelling houses, hospitals, &c. can be painted during occupancy without the least risk to the health of the inmates. It preserves wood from decay, and will be found effectual in preventing discolouration on stuccoed buildings, and keeping out all dampness.
D. and G. BRAMMER, Agents for Scotland.
Greenock, August 2st, 1855.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is not rendered discoloured by any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without the slightest danger to the inmates.
The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the materials employed or abuse of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increase of weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.
The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark in Hull by Messrs BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs T. B. MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs CHARLES DEVAUX and CO. Wholesale Agents, 63, King William-street, City; and BLACK BRADBY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bushes and in Southampton, by Mr. H. J. BUCHAN. Zinc OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.
The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.
For further particulars, apply to the Company's General Agency in London, 19, Manchester-buildings, Westminster.

TO ARCHITECTS.
COMPETITION and other DRAWINGS.—Mr. THOMAS B. ROBINSON, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting and Colouring Architectural Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

ARCHITECTURAL OUTLINES COLOURED, for Competition or Exhibition, in the first style, by GEORGE CHILDS (removed to 11, Sussex street, Warwick-square, Pimlico.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper. Apply to Mr. S. BARLOW, 9, Thurloe-line, Holborn (between 1 and 2 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

MATHEMATICAL DRAWING INSTRUMENTS. JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen His prices will be found considerably lower than those usually for articles of similar quality and workmanship. Rules, scales, tapes, &c at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms: Day Pupils, three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, T Squares, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 34, Guildford-street, Russell-square.

PHOTOGRAPHY.—A complete set, 37. 5s. 8s. and 11l. 11s.—Send for a List at GILBERT FLEMING'S, 498, Oxford-street, Author of "First Steps in Photography," price 6d.; by post, 7d.

AN ARCHITECT, in Edinburgh, intends to commence, in OCTOBER next, a Course of PRIVATE LECTURES on Architecture to Pupils, who may thus have the benefit of systematic instruction in addition to the training usual in offices.—Particulars to be learned on application to No. 56, Office of "North British Advertiser," Edinburgh.

HANSON and CHADWICK'S PATENT HIGH-PRESSURE WATER-METERS HERBERT FROST and CO. are now prepared to execute orders for the above. Descriptive circulars and lists of prices forwarded on application.—Angle-street Works, Clarendon-street, Oxford-street, Manchester

FREE RAILWAY TICKETS.—ENFIELD ESTATE.—IMPORTANT to BUILDERS.—The head of every house built upon the Waddinton Estate, of the value of 30l per annum, will be entitled to a Free First-class Railway Ticket; and of every house of the value of 20l per annum, will be entitled to a Free Second-class Railway Ticket, for fourteen years.—Apply to Mr. GEORGE MORGAN, 5, Chancery-lane.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the following greatly reduced prices:—

Pine Planks, 12 ft. 3 in. by 9 in.	from 3s. 6d.	each
Spruce Deals 3 in. by 9 in.	„ 2s. 9d.	„
Yellow ditto	„ 4s. 6d.	„
Yellow Battens, 9 in.	„ 0s. 2½d.	per foot.
Honduras Mahogany, in logs	„ 0s. 4½d.	„
Ditto ditto, in planks and boards	„ 0s. 6d.	„
Spanish ditto	„ 0s. 7d.	„

Prepared Flooring, Veneers, &c. at equally low prices. A list forwarded on application.
Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

A CORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and fir cut deals, slating battens, laths, English oak plank, and sash sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark bridge Wharf, Bankside.

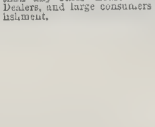
Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading-desks, Screens, Altar Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.



STAINING DEAL TO IMITATE ALL KINDS of WOODS IS required NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 44, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,
which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, and the price consequently less than pumps made on the old plan.
Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.
JOHN WARNER & SONS,
8, Crescent, Jewin street, London,
Manufacturers and Patentees.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile driving, raising materials, &c. &c.

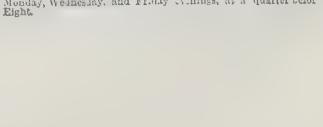
Contracts taken for pumping any quantity of water.
JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Pimlico-road, Chelsea, Southwark, London.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 23, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

WOOD-CARVING and FRET-CUTTING.—T. HEWETSON, Wood-Carver, and Fret-Cutter, 5, Hatton-garden, London, begs to inform Architects, Builders, Iron-founders, Cabinet and Pianoforte Makers, that he is prepared to execute any kind of Architectural or Ornamental work, with accuracy and despatch.—T. H. particularly solicits the attention of Ironfounders, having had many years experience in ornamental pattern making.—Estimates furnished.

FILTRATION BY ASCENSION.
RANSOME and CO. Sole Patentees of the New "AUTOMATON" PURIFIER; also Manufacturers of every variety of FILTERS (Portable or for Immersion), fitted with the Patent Purifying Medium. Pure Water, in any quantities, for Water Companies, Manufacturers, and others, obtained at a very moderate cost, by the use of "Ransome's Filtering Slabs." An Illustrated Priced List and explanation at the Depot, Whitehall wharf, Cannon-row, Westminster, or at the Patent Stone Works, Ipswich. A liberal discount allowed to the Trade. Filter Manufacturers and Exporters supplied with "Ransome's Patent Filtering Medium," separately, on the lowest terms.
Ransome and Co are also the Patentees and Sole Manufacturers of the Patent "Iris Fountains" for Drawing-rooms, Conservatories, &c

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.
CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids, and grease. It is used advantageously for fires in marine and land engines, railway buffers and springs, washers for flanges, hose and tubing; also for sand-bolters, acid pumps, alkali cisterns, &c. &c. Articles moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge street, Manchester.



HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Beadings, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.
Diving dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.
Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.
N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1853.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined and inquired into the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

HARD RUBBER, as a Substitute for Ivory, Ebony, &c. Also, India Rubber Packing, Tubing, Mill Straps, and Printing Blankets. For sale by DODGE, BACON, and CO 23, Coleman street, sole Licensees of GOODYEAR'S Patent for India Rubber Combs, and Importers of CROCKETT'S Patent Leather Cloths.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other Continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 6s per foot superficial, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 9, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 58, New Bond-street.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 9.
HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 10 to 150 feet; their efficiency and durability by experience established.
The Equilibrium Ball-valve is simple and certain in its action, and much less liable to get out of order than the common Cock now in use.
Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.
THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

ROYAL POLYTECHNIC INSTITUTION. Patron: H.R.H. Prince ALBERT.—Lecture at 3 30 and 8.30, by J. H. Pepper, esq. on the largest Bar of the Metal Aluminium yet produced from Clay, being a present from his Imperial Majesty the Emperor of France. This unique and rare specimen is on view daily and in the evenings.—Thames Water, in the Microscope, daily, at Four and Nine o'clock. Russian Infernal Machines, at 3 45 and 8 45.—Lecture by Dr. Brown, F.L.S. &c. on the Adulterations of Food, Tuesday, Thursday, and Saturday, at One o'clock.—Lecture on the Fissaco of Sound through Conductors, illustrated by the Orpheus Glee Union, Monday at Three, and Wednesday and Friday at Three and Eight. Artist Collection.—Dissolving Views and Diorama of Sam Slick, &c.—Re-engagement of George Buckland, esq.—Musical Lecture on Monday, Wednesday, and Friday evenings, at a quarter before Eight.

FOWLER'S
IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 1l. 15s.

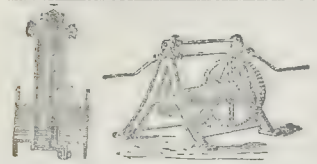
The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

ON SALE SINGLE PUMPS, BARRELS AT SHORTEST FOR HAND STEAM

AND HIRE, AND DOUBLE 3 in. to 15 in. to any depth, NOTICE, OR POWER.

FOWLER'S
PORTABLE PUMPS,



3-inch to 9-inch Barrels, Plain or Sliding Telescope Suction.

Wrought-iron Pails, Galvanized or Painted.

Pulley Blocks of every description.

BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.

IMPROVED SLUICE-COCKS, for Water, Gas, or Steam, brass faced, and sluices raised by square threads, engine turned screw, working in brass nut, in every respect as good as can be manufactured, are offered at the following prices per inch:—

2-inch.	3 and 4 inch.	5 to 9-inch.	10 to 15-inch.
16s	1l	1l8s	1l9

Lithographs of the improved self-lubricating and various other constructions, with descriptions and prices attached, may be had on application.

Single purchase Builders' Crabs, as above, fitted with two handles, and wrought-iron braces and spindles, with set to throw in and out of gear.

Price	70s each.
Stronger and larger ditto	6l 10s do.
Double purchase	8l 8s do.
Treble purchase	12l 12s do

BARRETT, EXALL, and ANDREWS, Kate's Grove Iron works, Reading. Agents in London, DRAY and CO. Swan lane.

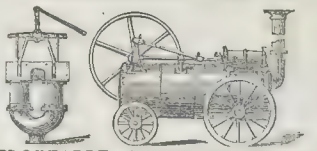
TO CONTRACTORS.

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10 horse, 12 horse, 16-horse, 20-horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work.—Apply to Messrs MEDWIN, HALL, and CO. Engineers, 93, Blackfriars-road, Sole Patentees and only Manufacturers. N.B. Any of these Engines may be purchased.

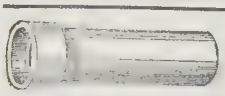
M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, or as well sunk up, & adapted for any depth. Hydraulic Rams for deep wells

PUMPS ON HIRE.

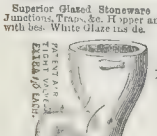


Pumps of any size, single or double barrel, to draw 6 to 12 in diameter, kept ready for use at reduced prices



N.B The above can be worked either by hand, horse, or engine power.

Iron Pails 9s per doz. painted.
Ditto .... 48s per doz. galvanized.

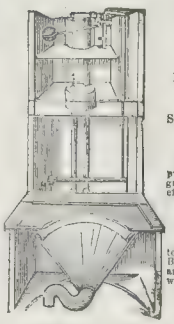


Upper Ground-street, Blackfriars Bridge. Surrey Side.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for future at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

Superior Glazed Stoneware Pipes, Bends, Junctions, &c. Hopper and other Pans, with best White Glaze inside and out.

Pan, 3s. 6d.



Trap, 2s.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

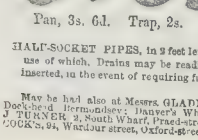
Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1853.

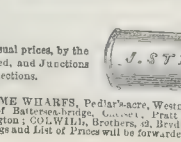
GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.



I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

JAMES STIFF,

MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES,



LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

Dublin—Messrs. Bruce and Symes.

Offices—Cannon-street Chambers, 3, Cannon-street, London.

In the manufacture of iron from the ore an amount of refuse is thrown out in the proportion of from one to three tons to each ton of iron metal. In lead and copper this proportion is considerably greater. This refuse, variously termed scoriæ, lava, slag, &c. has hitherto remained not only valueless, but a source of increasing embarrassment to the manufacturer, from its vast accumulations. To utilize this product is the object of the operations of this Company.

Dr. W. H. Smith has succeeded in establishing a method by which this refuse, through a simple and most inexpensive process, may be converted into a material that in its rough-moulded state serves admirably, from its texture and durability, for paving, flagging, flue, and general building purposes, and the surface of which, when polished, resembles the best specimens of variegated marble for its beauty and absence from defect, and is, moreover, capable of artistic design by the incorporation of colour at will in the substance of the material itself, and, therefore, indestructible. The material can be moulded in any given shape or size, and the cheapness of its cost, compared with that of stone or marble, will render its application for building, household, and ornamental purposes very general.

This important invention has been patented by Dr Smith in Great Britain, where rights therein have been purchased by this Company for a fixed sum, the payment of which entirely depends on the complete success of such further testing as hereinafter referred to.

The great value of this invention may be in some measure computed, when it is considered that there are annually in the United Kingdom six or eight million tons of the Iron Slag alone thrown aside as a refuse material, the utilisation of a fraction of which only would be sufficient to render the invention a most valuable property.

The practical working of this invention has been tested, with a view to ascertain the necessary capital required for the cost of construction and machinery, and for the cost of production of the material.

The cost of the article in its rough-moulded state, as applicable to general building purposes, will, at the place of manufacture, not exceed 5s. per ton, as far as the testing which has taken place will permit the direct results to judge; but, before any later estimate is made, they propose erecting limited works at first, which will enable them to say with perfect certainty the exact cost. This estimate, in their judgment, leaves a large margin to cover every possible contingency, and, taking London as a central market, there must be added 15s. per ton for the cost of transport, making 20s. per ton delivered in London.

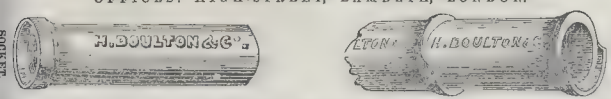
In its polished state it is estimated that it can be manufactured at the rate of 3d. per square foot of one and a half-inch thickness, and 4½d. per foot 1-inch thickness. Polished marble of similar thickness sells on an average at 6s. per square foot. Supposing that the polished manufactured article was sold at 5s. 6d. per square foot, and as the ton contains 14 feet of 1-inch thickness, it follows that there would accrue a profit of above 9l. per ton. A comparison of these figures may fairly suggest a general average profit of 3l. per ton on the rough-moulded and the polished article taken together.

The question is simply one of consumption; and with the immense advantages which this article affords in point of economy and universal utility, there is little doubt that in a short time the manufacture of 100 tons daily would far from suffice to supply the demand.

Another branch of profit may fairly be expected from revenue to be derived from royalties at different iron-works throughout the kingdom.

Arrangements can be made with several large ironmasters for the erection, on their premises, of the necessary works, so that within a few months after the constitution of the Company the manufacture of the material may be commenced, and the returns will be almost immediate.

Applications for Shares to be made to the Brokers, or the Secretary of the Company, in the form annexed.



APPLICATION FOR SHARES.

To the Directors of the British Slag Company.

Gentlemen,—I request that you will allot to me shares of 5l. each in the British Slag Company; and I hereby agree to accept such shares, or any less number that may be allotted to me, on the terms and conditions of the deed of settlement of the Company, and to pay the deposit thereon of 1l. per share when called on.

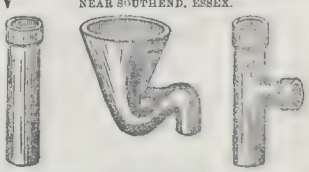
SUPERIOR GLAZED STONEWARE
DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.
W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.
W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering it, peace in the drains impossible.
W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—
Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britton-street, Chelsea: and at the Pottery.



PATTEN'S PATENT HIGH-PRESSURE
WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead traps, &c. Any number of Closets can be supplied from one main

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post.
Price for Closet and Apparatus complete from 2l. 8s. and perfect action guaranteed. Fixed by engineers to be seen on the premises of the Patentee, WILLIAM PATTEN, 22, Old Fish-street, near St Paul's, London.
Crown Glass, 18 tables, 30s. per Crate.

ISAAC PARRY'S
GLAZED STONE SEWER PIPES,
RED DRAIN PIPES, AND CHIMNEY-POT MANUFACTORY,
CHURCH-STREET, DEPTFORD, KENT.
ESTABLISHED UPWARDS OF 100 YEARS.

VICTORIA POTTERY, LEIGH,
NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,
MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article of Stone Ware on advantageous terms. BOROUGH of WAKEFIELD.—The Council of the Borough of Wakefield, being also the Wakefield Local Board of Health, are in want of a SURVEYOR, who must have a thorough practical knowledge of his profession. He will be required to devote the whole of his time to the duties of his office, which may be specified as follows:—To take the management of all streets, highways, sewers, and house drains under the direction of the Local Board; to make all plans, estimates, valuations, and superintendents, and to conduct all works directed by the Local Board; to see that all contracts for works entered into with the Local Board are properly carried out; to keep all accounts, and make all reports connected with his office; to perform all the duties specially imposed upon the surveyor by the Public Health Act, 18.8, or which by that Act or any Act supplemental thereto or amending the same, the surveyor may be authorised or required to do; and to perform such other duties as are set forth in a general statement, printed copies whereof may be obtained on application at the Board Office, Wakefield. Salary, 130£ per annum. All applications, with testimonials, to be addressed to the General Purposes Committee of the said Borough, endorsed, "Application for Office of Surveyor," and to be forwarded, prepaid, under cover to the Town-clerk of Wakefield, on or before 1st SEPTEMBER next.—By order

JAS. WHITHAM,
Town-clerk, and Clerk to the Local Board of Health.

J. TURNER, Hon. Secretary, 15, Wilton-street.

COMPETITIONS.

TO ARCHITECTS AND OTHERS.

THE Burial Board for the parish of Newark-upon-Trent, in the county of Nottingham, is desirous of receiving DESIGNS, to comprise plans elevations, sections, and specifications, with estimates, for MAKING ROADS and PATHS, and LAYING OUT and PLANTING about BURIAL-GROUND, containing about six and a half acres, ENCLOSING the GROUND, BUILDING a LODGE, with entrance gates, BUILDING TWO CHAPELS, either separate or attached, with complete fittings and accommodation for not less than 1,000 persons, the total cost of the whole not to exceed the sum of 2,500£. A premium of 10£ will be paid for the best Design, and a premium of 5£ for the second best. The designs, with estimate of the costs, accompanied by working drawings and specification complete without the author's name, but with a motto and sealed letter) to be delivered (free of expense) on or before the 7th day of SEPTEMBER next, at my offices, in Kirk-gate, Newark, of whom a plan of the locality and further particulars may be obtained. The Burial Board do not bind themselves to carry out any of the designs. The architect will be required to undertake and complete the works according to his plans, for the amount of his estimate, if required by the Board to do so; but the Board do not pledge themselves to carry out the architect whose designs may be accepted.—By order of the Board,

WILLIAM NEWTON, Clerk to the Board.

Offices, Kirk-gate, Newark, 9th August, 1855.

N.B. The locality yields Ancaster stone for dressings, and white and red Trent bricks.

WHITE-CROSS ESTATE, WESTON-SUPER-MARE PREMIUM of FIFTY GUINEAS. The proprietors of this estate cannot, in justice either to themselves or to competitors, form any separate plans of it; but they will be happy to receive, on application to Mr. JOSEPH WHEREAT, at the Public Library, Weston super-Mare; and perhaps it is not saying too much to assure, that it is impossible to make a correct or satisfactory plan or design for building on this estate, without an actual and personal survey. The time for furnishing designs is extended to the 20th SEPTEMBER next.

Weston-super-Mare, August 7, 1855.

COMPETITIONS.

WHITE-CROSS ESTATE, WESTON-SUPER-MARE. Parties desirous of competing for the PREMIUM of FIFTY GUINEAS for the best PLAN of laying out the above estate, may be furnished with a correct plan to the scale required, for the sum of One Guinea, together with every information as to the locality, on application to Mr. GEORGE PARMINTER, 81, St. Martin's-lane, London.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Commanding Royal Engineer's Office, Dublin, 11th August, 1855.—The Principal Officers of Her Majesty's Ordnance hereby give notice that they will receive PROPOSALS for the following CONTRACT, viz.:—For the CONSTRUCTION and ERECTION of STABLING for fifty troop horses, forage stables, an infirmary stable, at the Temporary Barracks in the Curragh of Kildare, in the Dublin district. Persons desirous of tendering for the same, will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin; and may obtain specifications, with the terms of contract, upon making a deposit of 1£ for the same, which deposit will be repaid when the specifications are returned unsoiled. The whole of the work to be completed within forty days after the acceptance of the Tender.—The letter of Tender to be sealed, and transmitted, under cover, to "The Director-General of Contracts, ordnance office, Pall-mall London," so as to be received on or before the 26th day of AUGUST, 1855, and to be marked on the outside "Tender for Work at the Curragh of Kildare."

FIRE GOODS, TERRA COTTA, AND GRINDSTONES.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS. J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to largely increase the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal London architects, and others with whom he has dealt them to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments, tombs, and every description of work sent to the country carefully packed. Steam Planing and Sawing Mills, NEW WORKS, No. 30, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about two yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by enclosing six postage stamps.—Please note the address, No. 30, BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

VALUABLE QUARRIES, &c. in FORFARSHIRE, TO BE LET — To be let for such number of years as may be agreed on with entry at Martinmas next (if necessary) and known FLAG or PAVEMENT and FREESTONE QUARRIES of LEASMILL, and BURDEN, belonging to W. F. Lindsay Carnegie, Esq. and situated on the line of the Arbroath and Forfar (Aberlemno) Railway, and near to the Leysmill Station, about five miles from the Seaport Town of Arbroath. And along with them will be disposed of the whole MACHINERY, comprehending one Stone Planing Machines, with the Polishing Apparatus; one Steam Engine of 20 horse power in full operation. The FARM of LEASMILL, extending to 178 acres, or thereby, of arable land all enclosed and thoroughly drained, and in a high state of cultivation; and the Dwelling-House and steading of farm offices, may, if desired, be let along with the Quarries.

The Leysmill Quarries have been long established, and worked upon a large scale by the present proprietor; and an extensive trade is now carried on from them both in the home and export branch, for which there are extraordinary facilities. There is a railway even in at the quarries, and direct railway communication with and to all parts of the kingdom. The neighbouring harbour of Arbroath and Dundee are also accessible by direct railway conveyance. The flags are well known at home and abroad as Arbroath pavement, and the freestone is of the first quality, and can be raised of great size. These quarries were the seat of the invention of Hunter's stone planing-machine, now in such general use for reducing stone artificially, and of working the machinery, and the invention of Mr Hunter's, for sawing blocks and gabbing work, recently patented, and which promises to be of equal importance to the public at large, may be seen in operation there during working hours.

To capitalists wishing to embark in the stone trade, or to accompany which it might be found desirable for the purpose, they offer a unique opening which, is deserving of attention For further particulars apply to JAMES LESLIE, Esq. Civil Engineer, George-street, Edinburgh; Messrs. LINDSAY, MAY, and HOWDEN, W.S. Edinburgh, or to Messrs. LOUDON, MACDONALD, and BLACK, Writers, Arbroath, the last of whom will give directions for showing the quarries, and to whose agent offers may be lodged on or before the 1st of SEPTEMBER next

Knabblemont, near Arbroath, 20th June, 1855.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its principles have been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the Kingdom are now in course of erection upon this principle, which is recommended to the notice of the public, not only on the score of economy, both as superseding the necessity for cast iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr BARRETT, 15, York-buildings, Adelphi

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE—Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat.

COPY OF MESSRS RYLANDS AND SONS' TESTIMONIAL.

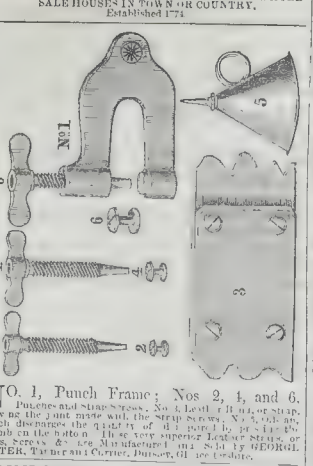
"24, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"GENTLEMEN, We have great pleasure in communicating to you, that the large 'Patent Fire proof Safe' that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subjected to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,



"RYLANDS and SONS.

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; also Safes fitted with the Detector Lock. Complete illustrated Lists, with prices and testimonials, will be sent on application.

6-inch Rd. Ward Mortise, with best Furniture and Patent Spindles, 3s. 6d. each. Light Elliptic and Register Metal, 14s. per cwt.		6d.	1s. per knot.

Dr. Arnott's Ventilators, 4s. 6d. each.

An extensive stock of bar, rod, hoop, and sheet iron.

Brick Moulds kept in stock. Any size made to order.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

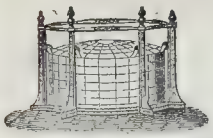
Many roofs covered with zinc thirty-five years ago have never required repairs.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

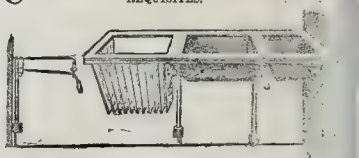
These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

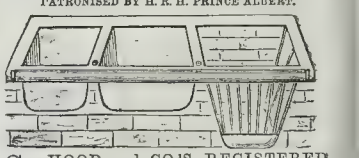
SOLE AGENTS:



BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.



SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER-TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well-managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's Improved Fitments. May be had either plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley street, Oxford-street.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.
Castings Warehouse removed from 81 to 68, Upper Thames-street.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES, &c. — F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and O-G Gutters, Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connections, Sash Weights, and other castings; Iron-work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Price equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 8, Bankside, London, near the Southwark-iron-bridge.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 42, Poland-street, Oxford street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO., opening to the Monument, London bridge. Established A.D. 1700

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.
W. B. BARTLETT, manufacturer of Girders, Columns, Cast-levers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.

UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS.
Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.
IRON ROOFS.
Patent Corrugated, Galvanized, and Painted, Wrought-iron, principal, Glass and Slated Roofs, to any span.
Wrought and Cast-Iron Bridges, Girders, Fire-proof Floorings, Shutters, Doors, &c.
Engineers' and Builders' Castings of all kinds manufactured by JOHN WALKER,
Builder, Contractor and Ironfounder, Mill-wall, Poplar.
Offices: Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.
N.B. Galvanized and painted Sheet Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

PATENT GALVANIZING and CORRUGATING IRONWORKS (Improved Process).
WORKS—GLASS-HOUSE YARD, opposite the Entrance to the London Docks.
GALVANIZED SHEET-IRON and WIRE of every description superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.
ESTIMATES given for IRON ROOFS, Corrugated Sheds, Houses, &c.
A Discount allowed to the Trade.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire proof. Drawings and estimates furnished.
Island Foundry and Ironworks, Millwall, London.
Offices: 12, Fenchurch-street, City.

JOHN HENDERSON PORTER, ENGINEER AND CONTRACTOR, IRON BUILDING AND ROOFING WORKS, GAS-STREET, BIRMINGHAM.
LONDON OFFICE—1, RICHES-COURT, LIME-STREET.

SKAIFE'S GALVANIZING WORKS, Commercial-road, Limehouse, London.
Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.
Patent Galvanized Iron supplied in every form.
Sheets plain and corrugated. Roofs fixed complete.
J. Skaife is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles.
An Allowance to the Trade.

PFEIL AND STEDALL.
THE LARGEST STOCK AT
THE LOWEST PRICE,
5 AND 6, BROAD-STREET, BLOOMSBURY.

EDWARD RUSSELL, ALMA TUBE WORKS, WALSALL, Manufacturer of Wrought Iron Tubing for Gas, Steam, and Water; Stocks, Taps, and Dies, and all kinds of Gas Fittings.

TO ARCHITECTS AND BUILDERS.
PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any bank, public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, 2s. 6s. 6d. each.
J. H. BOOBYER (late STURCH and BOOBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.
No. 1091, Class 8, Section 16, BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

FREE RAILWAY TICKETS.—ENFIELD ESTATE.—IMPORTANT to BUILDERS.—The head of every house built upon the Waddington Estate, of the value of 30l. per annum, will be entitled to a Free First-class Railway Ticket; and of every house of the value of 20l. per annum, will be entitled to a Free Second-class Railway Ticket, for fourteen years.—Apply to Mr. GEORGE MORGAN, 5, Chancery-lane.

A CORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floor-boards, mouldings, pine and oak deals, slating battens, laths, English oak plank, and sash sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber Deals, Oak Planks, Scantlings, Sash Bills, Mouldings prepared by Machinery, Laths, &c. Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

SEASONED FLOORING.—GEO. NOKES and CO. (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—
¼ inch White, 13s. 6d. per square. ¼ inch Yellow, 15s. per square.
½ ditto 15s. ½ ditto 16s. 6d. "
1 ditto 18s. 1 ditto 20s. "
Laths, 3s. per load.
Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.
ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

TO BUILDERS AND OTHERS.
AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING of all descriptions. Also an extensive stock of Dry White, Yellow, and Fine Cut Stuff. Battens, Paving Laths, Oak Plank, Sash Cills, &c. Timber of all kinds, Planks, Deals, and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the following greatly reduced prices:—
Pine Planks, 12 ft. 3 in. by 11 in..... from 3s. 6d. each.
Spruce Deals..... " 3s. 9d. "
Yellow ditto..... " 4s. 0d. "
Yellow Battens, 9 in. 12l. per 120.
Honduras Mahogany, in logs..... " 0s. 4½d. per foot.
Ditto ditto, in planks and boards " 0s. 6d. "
Spanish ditto..... " 0s. 7d. "
Prepared Flooring, Veneers, &c. at equally low prices. A list forwarded on application.
Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

UNIVERSAL MOULDING-MILLS, 24, Portobello-road, Notting-hill.
WILLIAM LEE, having commenced business at the above Premises as Moulding Manufacturer with the latest improvement in machinery by C. Chambers, begs to offer to the Public, Architects, Builders, &c. his new and fashionable Patterns for Architraves and Skirting Mouldings, of which only a trial is required to gain their patronage and support. Also, that all goods manufactured by the said W. L. are of the best seasoned timber, and at such a price and quality as not to be surpassed by any other house in the trade.—N.B. All customers having an account at the above establishment can be supplied with mouldings to their own design, at the shortest notice, free of any extra charge.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Work, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Joinery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

TO TIMBER MERCHANTS, BUILDERS, TURNERS, AND OTHERS.
TO BE DISPOSED OF, by PRIVATE CONTRACT, 1,000 PEAR-TREES, in good condition.—For particulars, apply to W. BRANDON, 9, Portland-terrace, Rotherhithe.

TRELOAR'S COCOA-NUT FIBRE MANUFACTURES, consisting of Matting, Mats, Mattresses, Brushes, Netting, &c. are distinguished for superiority and excellency of workmanship, combined with moderate prices. Prize medal both in England and America, at the Exhibition of all Nations.—T. TRELOAR, Cocoa-nut Fibre Manufacturer, 42, Ludgate-hill, London.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of all WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO. Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., YENTNOR, ISLE of WIGHT, —Second Testimonial.—" March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HARD RUBBER, as a Substitute for Ivory, Ebony, &c. Also, India Rubber Packing, Tubing, Mill Straps, and Printing Blankets. GOODYEAR'S AGENCY, and CO. 22, Coleman-street, sole Licensees of GOODYEAR'S Patent for India Rubber Combs, and Importers of CROCKETT'S Patent Leather Cloths.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 50 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.
No. 1 quality, inches diameter, and price per yard.
½ ¾ 1 1¼ 1½ 2 2½ 3 3½ 3 in.
9d. 11d. 1s. 1d. 1s. 3d. 1s. 5d. 1s. 7d. 1s. 9d. 2s. 2s. 3d. 2s. 6d. 2s. 9d.

Dublin Messrs. Bruce and Symes.
Offices—Cannon-street West, 3, Cannon-street, London.
In the manufacture of iron from the ore, an amount of refuse is thrown out in the proportion of from one to three tons to each ton of iron metal; this has hitherto remained not only valueless, but a source of increasing embarrassment to the manufacturer from its vast accumulations. To utilize this product is the object of the operations of this Company. This substance, by a simple and most inexpensive process, is capable of being converted into paving, flagging, tiling, and general building purposes, and, when polished, resembles the best specimens of variegated marble for its beauty and absence from defect; and is, moreover, capable of artistic design, by the incorporation of colour at will in the substance of the material itself, and therefore indestructible. The material can be moulded in any given shape or size, and the cheapness of its cost, compared with that of stone or marble, will render it an application for building, household, and ornamental purposes, very general.
This important invention has been patented in Great Britain, and the patentees' rights have been purchased by this Company for a fixed sum, the payment of which entirely depends on the complete success of such further testing as the Directors consider necessary.
There are annually in the United Kingdom six or eight million tons of the Iron Slag alone thrown aside as a worthless material, the utilisation of a fraction of which only would be sufficient to render the invention a most valuable property.
It is estimated that a general average profit of 3l. per ton on the rough moulded and the polished article taken together may be reasonably anticipated.
The question being simply one of consumption, and with the immense advantages which this article affords in point of economy and universal utility, there is little doubt that in a short time the manufacture of 100 tons daily would far from suffice to supply the demand.
Another branch of profit may fairly be expected from revenue to be derived from royalties at different iron-works throughout the kingdom.
Detailed prospectuses may be had at the Company's Office, or from the Brokers
APPLICATION FOR SHARES.
Applications for Shares to be made to the Brokers, or the Secretary of the Company, in the form annexed.
APPLICATION FOR SHARES.
To the Directors of the British Slag Company.
Gentlemen,—I request that you will allot to me shares of 5l. each in the British Slag Company; and I hereby agree to accept such shares, or so many as may be allotted to me, on the terms and conditions of the deed of settlement of the Company, and to pay the deposit thereon of 1l. per share when called on.

THE HARMONIC LAW of NATURE APPLIED to ARCHITECTURAL DESIGN.

By D. R. HAY, F.R.S.E.

"This treatise" read at a meeting of the Royal Institute of British Architects, has already excited considerable interest in the profession. Mr. Hay's plan consists of a series of arguments to prove that "the really dead exist a mechanical law coincidine with the 'harmonic law' which exists in nature, and that this law can be applied in imparting beauty to Architectural structures of any order or style. The beauty of the theory is its universality, and its simplicity. And the Author accomplished his purposes by the simplest means: the harmony of nature is indestructible, and self-restoring. Mr. Hay's book on the 'Parthenon,' on the 'Natural Principles of Beauty as developed in the Human Figure,' his 'Principles of Symmetrical Beauty,' his 'Principles of Colouring, and Nomenclature of Colours,' his 'Science of Proportion, and 'Essay on Ornamental Design,' we have already noticed with praise as to the results of philosophical and original research." *Athenæum, March* 10, 1855.

"This essay is a new application to Lincoln Cathedral of the Architecture of the Principle of Symmetrical Beauty already so profusely illustrated and demonstrated by Mr. Hay. The theory which Mr. Hay has propounded in so many volumes is not only a splendid contribution towards a science of esthetic proportions, but, for the first time in the history of art, proves the possibility, and lays the foundations of such a science. To all se who are not acquainted with the facts these expressions will sound hyperbolical, but they are most true." *Builder's Jour., March* 22, 1855.

The last remaining features of this Society are—

The unquestionable security afforded. The moderate rates of Premium charged. The large Bonus or return of Profits made to Life Assurers, and almost other important advantages, all of which are fully detailed in the Prospectus.

Three-fourths of the Profits are divided every five years, among those Policies which participate.

The practical effect arising from this system, will be at once seen from the following extracts from the Society's books:—

ADDITIONS ALREADY MADE TO POLICIES OF VARIOUS AMOUNTS.

Year Policy effected in	Sum Assured.	No. of Years Assured	Bonus added to Policy.	Total Sum payable at Death
	£.		£ s. d.	£. s. d.
1843	3,000	12	584 12 6	3,584 12 6
1841	1,500	12	192 10 5	1,692 10 5
1844	2,250	11	203 19 10	2,453 19 10
1845	2,500	10	213 7 4	2,713 7 4
1849	5,000	6	205 11 0	5,205 18 0
1851	5,000	4	124 8 10	5,124 1 10

The Third Quinquennial Division of Profits will take place at the close of the year 1859.

GENERAL ADVANTAGES.

1. Participation in Profits or not at the option of the Assured. The without Profits are at rates lower than those demanded by most of the Proprietary Offices.

2. No entrance fee or charge for Policy Stamps.

3. Parties allowed to pass and repass in times of peace, from one part of Europe to another or seas and land, except Turkey or the Levant without payment of additional Premiums, or incurring the risk of forfeiture of Policy.

4. Claims paid three months after proof of the death of the party assured, or sooner, deducting interest at 5 per cent.

5. Should any of the assured, unforeseen circumstances be unable to pay a Premium, he will be allowed by the Directors (if his Policy be of at least two years' standing), to let that Premium stand over as a debt against the Policy.

Forms of Proposals and Prospectuses containing all necessary particulars, may be had at the Society's Offices, and of the Agents throughout the United Kingdom.

SCOTTISH EQUITABLE (MUTUAL) LIFE ASSURANCE SOCIETY.

Incorporated by Special Act of Parliament.

THE TWENTY-FOURTH ANNUAL GENERAL MEETING of the Society was held at Edinburgh, on Tuesday, May 1, 1855. The Report, by the Directors, among other information, contained the following particulars:—

During the year closed on 1st March last—

928 Policies have been issued;
The Sums Assured thereby amount to 284,670*l.*;
And the Annual Premiums thereon to 9,411*l.*

The position of the Society at 1st March was as follows:—

Existing Assurances	£4,452,734
Annual Revenue	76,304
Accumulated Fund	910,845

This Corporation has been in existence twenty-four years. It proceeds on the principle of mutual contribution, the surplus or profit being wholly divisible among the Members.

The total additions to Policies made at and preceding March 1, 1854, amounted to SIX HUNDRED AND SIX THOUSAND EIGHT HUNDRED AND FIFTY FIVE POUNDS.

The amount paid to the representatives of deceased Members is upwards of SIX HUNDRED THOUSAND POUNDS.

Copies of the report, and all other information, may be had on application at the Head Office, or Agencies.

Agent in London—W. COOK, 126, Bishopsgate-street Within.

VIEW OF THE PROGRESS AND POSITION OF THE SOCIETY.

	Amount Assured	Annual Revenue.	Accumulated Fund
At 1st March, 1837	£710,483	£26,993	£56,113

B. and K. have to offer the benefit of a long experience, and which has hitherto enabled them to conclude their transaction with satisfaction and success.—Grosvenor Office, Lower Belgrave-place, Pimlico.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 194, New Bond-street, and 3, Queen's-court, Clerkenwell, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9*d.*; best holland blinds, on rollers, 6*d.*; best ditto, on spring rollers, 9*d.*; gauze wire blinds, in mahogany frames, 3*s.*; perforated zinc blinds, in ditto, 1*s.* 10*d.*; outside blinds of striped cloth, 2*s.* Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

A GOOD CARPENTER'S CHEST and TOOLS TO BE SOLD, complete in every respect, for the sum of seven pounds. Inquire at No. 31, Hopkinson's Almshouses, Green-walk, Holland-street, Blackfriars-road, where it may be seen.

PHOTOGRAPHY.—A complete Apparatus, 3*l.* 3*l.* 5*s.* and 11*l.* 11*s.* Send for a List, post free, at GILBERT FLEMING'S, 498, Oxford-street, Author of "First Steps in Photography," price 6*d.*; by post, 7*d.*

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at is per foot super, together with every particular of cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 89, New Bond-street.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by trave ling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

The Builder.

Vol. XIII.—No. 654.

"PITY the poor prisoners!" This cry is not so often heard now as in past times; nor is there so much reason for it. Nevertheless, we raise it—and we hope it will not be in vain.

There are few things in the history of the country which impress us with more horror than the former condition of the prisons—not only of London, but the provinces. These were dens of vice, misery, and wickedness: men and women of all ages were huddled together: the jailor was also the publican; and night and day those who would, in the next week, be hanged at Tyburn, caroused with the newly-made thief, and others of different degrees in crime: the debtors—even the untried, and possibly innocent—were mixed with the worst of wretches; and many a man and woman who have by juries been acquitted, have been kept in jail until the day of their death, for no other reason than not being able to *pay the prison fees*. Sums were demanded on the entrance of every fresh person, and in many instances the clothing was taken from the backs of unfortunate creatures to raise this money, which was invariably spent in drink—the fearful father of uncounted crimes. In the cold winters many perished through lack of clothes. In some of the London prisons no allowance of food was made to those who were destitute, and it was not uncommon for persons to die of hunger. The misery of the prisoners was not usually continued long, for jail-fever and similar diseases were regular visitants, which, not content with the destruction of those in confinement, have been known to sweep away magistrates, counsel, and jury from the neighbouring courts. Words would, however, fail to give a clear idea of the condition of the London prisons when John Howard came forward in the cause of humanity.

Before the philanthropist who "lived an apostle and died a martyr" began his work, nothing in the way of substantial improvements had been effected: the endeavours of charitable individuals had been spasmodic only, and the evils were too great and too deeply seated to be thus reached. As Mr. Hepworth Dixon says, in his excellent and interesting memoir of Howard,—

"So gigantic were the vices which tainted the entire administration of the criminal law—so hopelessly corrupt and inculpated were all ranks of prison-officers,—so irredeemably indifferent were the convicts themselves to their debased condition,—so filthy and fever-haunted were the buildings in which they were confined,—it is not at all surprising that, after a short but fruitless crusade against the festering mass of moral plague, even benevolence itself should have shrunk from the peril and the pollution."

A Report, written in 1728, on the Marshalsea (now merged, together with the Queen's Bench and the Fleet, in the Queen's Prison, to which we are about briefly to refer), says—"In it are now confined upwards of 330 prisoners, most of them in the utmost necessity: they are divided into particular rooms called wards, and the prisoners belonging to each ward are locked up in their respective wards every night, most of which are excessively crowded, thirty, forty, nay, fifty persons having been locked up in some of them, not 16 feet square!" In a room called George's Ward, 16 feet by 14 feet, and about *eight feet high*, there were sometimes forty persons locked up, never less than thirty-two; and as the surface of the room was not sufficient to contain that number when laid down, one half were hung up in hammocks, while the other half lay on the floor under them; whereby, as the Report shows, the air was so wasted by the number of persons who breathed in that narrow compass, that it was not sufficient to keep them from stifling, and during the heat of summer several perished for want of air! At the end of the last century, dens were used in which life could not be maintained: human beings were locked up for the night in small cells, without chimney or other means of ventilation, in buildings polluted throughout by vilest emanations from defective drains. It is not to be wondered at that amongst the mass of filth, disease, and licentiousness, fostered if not induced by such conditions, the jail distemper raged with frightful virulence.

In the "chink" at Plymouth, 17 feet long, 8 feet wide, and *five and a half feet high*, dark and stifling, having neither air nor light but through a wicket 5 inches by 7 inches! three men were confined, under a sentence of transportation, for nearly two months! "They could neither see nor breathe freely, nor could they stand upright. To keep alive at all, they were forced to crouch—each in his turn—at the wicket, to catch a few inspirations of air; otherwise, they must have died of suffocation, for the door was rarely opened.' *

It is not of such things we have now to speak: the change since that time has been very great, and shows in a tolerably satisfactory way how much progress we have made in civilization; yet still—

"A prison is a house of care,
A place where no man thrives."

And it is both unjust and unfeeling to add unnecessarily to the damage of those pent up within the grim walls of the Queen's Prison and other metropolitan prisons. We are induced to make this observation by a statement which has reached us from inmates of the Queen's Prison, complaining of the unwholesomeness of some tallow-melting and other manufactories in the neighbourhood of the building in which unfortunate circumstances confine them. So unpleasant was the smell from these places, that the prisoners addressed a "round robin" to parties in authority on the subject. The nuisance, however, still continues, and several have been sick and ill: they say that loss of liberty is bad enough to bear, without the evil of an unpleasant and poisonous atmosphere. Several gentlemen who have been useful to the community are incarcerated here through various causes. One person has been shut up more than forty years, for contempt of the Court of Chancery. He is now a feeble old man, but must have had naturally a strong constitution to have lived so long under the contempt of that unforgiving tribunal. Whether he has outlived all ties beyond the walls, and has ceased to desire liberation, singing with him of Chillon,—

"——The whole earth would henceforth be
A wider prison unto me,"—

we cannot say. Works which have delighted the public have been produced within these walls, and here have dwelt some who, through misfortunes or defective organization, have been less able to command applause when living than when dead:—

"——The vision fades.—He dies.
Then comes renown,—then fame appears,—
Glory proclaims the coffin hers!
Aye, greenest over sepulchres,
Palm trees and laurel rise."

But not to go further into these particulars, we are anxious, for the health of "the poor prisoners," that they should be able to open the windows of their little rooms in this hot weather, and to walk in their circumscribed recreation space, without the annoyance and danger of breathing a foul and polluted atmosphere.

* Hepworth Dixon.

We have since made an examination of the neighbourhood of the Queen's Prison. The bone-boiling, melting, and "knackers'" yard is well known to the crowds of people who live in the numerous small houses round about it. For the sake of those outside as well as those in the prison, manufactories such as those now complained of should be removed without loss of time: the keeping of pigs should also be prevented, and some large yards more carefully seen after. Most of the property reaching from the prison towards the gasworks consists of houses two stories high, in long, straight streets, in many parts inhabited by dangerous characters. Strong men who might make capital soldiers are lounging in all directions in the dust and hot sunshine, gambling or in other ways *killing time*. There is scarcely any drainage, and several persons told us that at the commencement of the late rains the smells arising from the cesspools and surface drains, and from the manufactures alluded to, were intolerable. We found in every case of inquiry the same results — fever and other illness. Close by, in this district, one cesspool is made to serve for three or four houses, and the channel of communication is constantly being stopped up. The neighbourhood of all London prisons in time of summer heat should be carefully examined, and as far as possible all offensive matters should be removed: and so indeed with all neighbourhoods.

The fearful Shadow is again nearing our land; and once more we would urge on every influential man in every parish throughout the United Kingdom, that Poverty, Crime, Disease, and Death, are closely related to Dirt, Bad air, and Want of drainage.

ON THE PROGRESSIVE CHANGES IN ORNAMENT,

IN THE SUCCESSIVE STYLES OF MEDIÆVAL ARCHITECTURE.

The series of lectures at the Architectural Museum were closed by the following discourse from Mr. G. G. Scott, on "The Progression of Styles in Architectural Ornament."

It may be thought, said he, that a practical or professional man is the best person to lecture or to write essays on subjects connected with his calling. The very contrary, however, is usually the case, as the turmoil and disturbance of business really leave him scarcely a chance of giving the subject, whatever it may be, that quiet thought which is necessary to enable him to place it before his hearers or readers in anything like a perfect or systematic form.

In the present instance I have really found it impossible to make due preparation, the time fixed being the very busiest in the whole year, and I therefore need excuse for the desultory and imperfect form of what I may lay before you.

In my former lecture * (which was merely introductory to the subject) I gave a general sketch of the rise of Romanesque architecture, partly out of the *débris* of Roman art after its destruction by the northern tribes, and partly from the architecture which during the interval had developed itself in the Byzantine empire. I showed that the carved work of the Romanesque style was mainly derived from the latter (the Byzantine) source. I then showed how Pointed or Gothic architecture arose by a natural transition from the Romanesque. This led to a description of the foliage prevalent during the early days of Pointed architecture, which, though infinitely superior to that of the Romanesque period, and really not very much like it, still grew out of it by a gradual transition—a progressive and constant striving to assimilate their foliage to that of nature without as yet any direct attempt to imitate individual leaves,—an ideal representation or symbolizing of foliage in the abstract, without descending into particulars. The next step, and the crowning one of the ascending series, was the direct imitation of nature herself, without any idealizing or any further conventionalism than was necessary to

* See Vol. XII. pp. 474 and 483.

fit it to its uses, and the material in which it is executed. This we find to have been the point arrived at just when Gothic architecture had attained its highest perfection in other respects; and well did this attainment accord with its other perfections! From this point I briefly showed the gradual departure from nature during the latter part of what is called the "Decorated period," and its almost entire relinquishment during the prevalence of the Perpendicular style; and the adoption of a conventionalism which I attempted to distinguish from that of the early period as being one of *departure from* the standard of nature, while the other had been one of *striving onwards towards* that great standard of excellence. I further expressed my opinion that, inferior as is this latter class of conventionalisms to the other, the foliage of the late period is, nevertheless, replete with beauty, and that there is an immense deal to be learned from it which may be attended with great practical advantage to the student.

I will now illustrate the progression of which I then drew an outline by a series of specimens which I have selected as suited to place it in a clear and intelligible light.

Mr. Scott then illustrated the consecutive changes by a great number of examples; among which the following may be mentioned:—

1. *Capitals.*—The beautiful overhanging Early English capital, by specimens from Ely and Lincoln. The early use of natural foliage, in conjunction with the stiff overhanging crocket, or stalk, by French specimens in the Museum, and by a number of drawings enlarged from his own sketch-books. The use of natural foliage without this conventional feature, by specimens from Southwell, Ely-place Chapel, the Sainte Chapelle at Paris, Oppenheim, &c.; and the softened foliage of a somewhat later period, by specimens from Beverley, &c. The Perpendicular style is not remarkable for its foliated capitals. In early specimens they resemble (when foliated) those of the preceding style; but later, they are often enriched with square patera-formed leaves.

2. *Continuous Enrichments in Mouldings.*—Those in the Early or Conventional style, by specimens from Ely Cathedral, and the Chapter-house, Westminster. The perfect natural foliage, by specimens from Southwell, Archbishop Peckham's monument, &c. In its softened form by specimens from the famous screen facing the Lady Chapel at Winchester, and the Conventional style of the fifteenth century, by many examples in the Museum.

3. *Detached Enrichments in Mouldings.*—Toothed ornaments, simple and enriched; and the rose enrichment, by specimens from Stone Church and Ely; detached foliage in mouldings by various specimens. The use of the overhanging crocket in mouldings, by various French and German specimens. The same used in union with natural foliage in various forms, ditto.; detached natural foliage—various specimens. The ball-flower, and the four-leaved flower—specimens from Hereford Cathedral, &c. The square patera-formed leaf from Ely, &c.

4. *Crockets.*—The Early English crocket, by fine specimens in the Museum. The same form united with natural foliage, by numerous specimens from France and Germany. The early form of the natural crocket, or that formed from natural leaves, by specimens from Waltham-cross, Archbishop Peckham's monument at Canterbury, De Luda's monument at Ely, Southwell, St. Mary's Abbey, the Porte Rouge at Paris, the Sainte Chapelle, Strasburg Cathedral, Cologne Cathedral, &c. &c. The softened form of the later decorated, by specimens from Ely,—the screen at Winchester, St. Stephen's Chapel, &c. And those of the Perpendicular style, and the contemporary French crockets, by specimens in the Museum.

Bosses.—Of the Early style, there are many in the Museum which were referred to (being too large to be brought forward). Particular mention was made of a usual form in France where the foliage seems attached to a circular disk of plain stone, and is sometimes of wood attached to the stone (as in the crypt of the Sainte Chapelle); also to the peculiar form of boss used in wood ceilings of the Perpendicular period, as being remarkably well suited to its purpose. A specimen from Crosby Hall was shown, but the Museum is rich in specimens of this kind. Of bosses of the best periods, those over the choir at Westminster Abbey, and those at St. Mary's Abbey, may be mentioned as among the finest; and those in the Museum from the cloisters at Lincoln are fine instances of the introduction of figure sculpture.

Mr. Scott went in the same way through nearly every form of ornament, illustrating his remarks by specimens too numerous to be mentioned, and particularly calling attention to the peculiar adaptation of the late foliage to wood-carving: also instancing brattishing, poppy-heads, enriched panels, &c. as having been especially developed at those periods, and calling attention to the fact that, though the foliage of that style is generally treated conventionally, it is sometimes as perfectly natural as at any period. Of this, there are many fine examples in the museum, both French and English.)

But what do we learn from this long series of transitions? Is art for the future to become a mere resultant of antiquarianism? I trust not! If this were to be the end of our researches, it would be better for us to give them up without more ado, and, forming ourselves at once *in art*—as the Americans are in politics—into a "KNOW-NOTHING" party, to start afresh from first principles, ignore all antecedent, and shut our eyes to everything which our forefathers have done! This, however, is not a very easy thing to do, so that our best course will be to take as impartial a view as we can of the historical series we have in review before us, and to deduce from it *so much*, and *only so much*, as will aid us in our own work. What, then, is it that we find?

First, we find our forefathers, while erecting a new fabric of civilization from the ruins of an ancient world, gradually elaborating out of materials, once refined but subsequently barbarized, a new system of ornamentation of extreme beauty—I mean what we call the Early English foliage:—we find that system of ornament so far like nature as to convey the *idea* of natural foliage, without being exactly like it. We also find in that system a wonderful adaptation to the *uses* of the ornament: we find it, in short, to be thoroughly *architectonic* in its character. We find in the capitals a *strong, firm* contour, growing well out of the shaft, and lending a firm support to the abacus. We find light and shade to result spontaneously from the nature of the foliage, and that the foliage seems invented on purpose for stone carving and for architectural uses. It is so like nature, that one searches in all directions for its living type, and can scarcely believe that none exists; yet it meets so perfectly all the exigencies of architecture, that if it had a type in nature, one would be fain to believe that it had been created expressly to be copied in stone.

We find next a direct copying from nature, accompanied by a certain degree of adaptation, both in grouping into mechanical arrangements, and also in shaping leaves into crockets and other regular forms, as well as in adding boldness of relief where needed for architectural effect. We find, however, that in capitals and many other positions, the natural foliage did not of itself produce so decided and architectural an effect as that which it had supplanted, unless it were used *conjointly* with the strong stiff stalk which Nature did not supply, but which some of her forms may have *suggested* to the older carvers. By this union the highest perfection of architectural ornament was attained.

We find in this early adoption of natural types that the forms are usually given *hard* and *crisp*, without the softness and flexibility which is frequent in natural leaves, and that such leaves are especially selected as are *decided* and *rigid* in their outline. Relief and indentation of surface are often strongly represented, and even exaggerated, but not those accidental flexures which disturb the hard symmetry of the outline. This was well judged, as, in most positions in which foliage is introduced, this rigidity of form is of great importance to architectural effect. In the French carving of this period this severity of outline is carried much further than with us; for where the conventional stalk or crocket form is not used, the foliage is made constantly to reproduce certain symmetrical arrangements at equal intervals, and usually so placed as to agree with the angles or faces of the capital, while in the intervening spaces the leaves run freely as they will.

The first falling off may be traced to the departure from this severe mode of treatment, and the introduction of a greater amount of flexibility than is suited to architectural ornament. There are positions in which this is suitable enough, but in others it destroys the dignity and force of the ornament. At first this *softening* in the treatment of the foliage appears rather to add to its beauty, as in the screen at Winchester; but this beautiful phase is soon succeeded by one of great weakness, in which an enervated sentiment pervades everything. This is strikingly the case in the Lady Chapel at Ely, though the foliage there is often of exquisite beauty.

We next find what seems to be an attempt to regain the energy which had thus been lost; and though usually inferior in beauty, the carving of the Perpendicular period seems generally to have a more forcible character than that of the *later* portion of the previous style. We again find rigidity of outline and strong relief of surface united. The forms, however, are mostly conventional, and, though natural leaves are sometimes faithfully copied, they are more frequently so disguised as to be scarcely recognised, and still more usually lost sight of altogether. Is beauty, then, lost at this period? On the contrary, the genius of the carver often displays itself more strikingly than at any former period. In the *early* style, we see not so much the genius of the *individual* artist as of the *fraternity*, all the foliage being of one kind. In the second period, *nature* shares with the artist the admiration which the work may inspire; but in the third, the artist may lay claim to the whole, as he seems neither beholden, in any great degree, to nature, nor to masonic agreement, but invents for himself, or at least, has so large an assortment of conventional types that he appears to do so, and certainly his success depends wholly on himself, for the same types which in the hand of one carver are offensively ugly, we find in other hands invested with a beauty quite startling. It is certain that no style adapted itself so perfectly to the exigencies of *wood carving* as this. The peculiar sharpness of cut which prevails in this style is eminently suited to give that brightness of light and shade which are essential to bring out the carving in a dark material, such as oak, and is also peculiarly adapted to the tools of the wood carver. A few sharp cuts with the gouge will often, in this style, give more effect, when seen from a distance, than hours of labour in closely imitating natural leaves.

What, then, I repeat, are the lessons which we are to learn from all this?

Are we to fall back upon the conventional foliage of the Early Pointed Style, because we find it more perfectly architectural than perhaps any other? Or are we to imitate the carving of the fifteenth century, because of the merits we find in it, and its peculiar adaptation to wood carving? Certainly not. It may be laid down as an axiom that no *merely* conventional forms of decoration should be *imitated* from bygone times, unless, indeed, they so naturally arise from prescribed conditions, that by working out the problem for ourselves, we arrive at the same result. They may give us useful lessons, but they are not to be revived. *Nature alone* is the permanent source of artistic types. The early foliage had been generated by centuries of labour from a source with which we have no concern, and only became really beautiful when it approached nature. When that goal was reached, the restless spirit of the age led the artists to leave their model too soon to perfect themselves in the use of it. We are now literally without a style of our own; but, so far as relates to foliated ornament, have a truly glorious prospect before us, if we would really exert ourselves to attain it! Our course is clearly *to throw aside all past conventionalisms*, and to *fall back upon nature*, as our sole refuge from the slavery of precedent, and the enervating

effects arising from the knowledge of too many styles. In architecture itself, we have not this resource, but in its decorative portions, at the least, we are free.*

SOME MEMORIALS OF FATHER THAMES.†

Peter, the curate of Colechurch, having become old and infirm, or, from some other cause, unable to continue the works of London-bridge, the work was committed to Serle Mercer, William Almaine, and Benedict Botewith, merchants of London, under whose inspection the first stone bridge was erected about 1209. When the building of the bridge was finished, a chapel was erected thereon, which was dedicated to St. Thomas, and endowed for two priests and four clerks. This chapel was erected on the ninth pier from the north end, and was 60 feet long, 20½ feet wide and 14 feet high. Besides the entrance to this chapel from the bridge there was another from the river, both of them paved with black and white marble. A commodious dwelling-house having been built over this chapel, it was occupied from time to time by various persons in trade, and the last tenants before the total demolition of the bridge were Wright and Gill, wholesale stationers, by whom this venerable chapel was converted into a warehouse. Chamberlain tells us that a survey of the bridge was made in 1730, when it appeared that the exterior part of the foundation on which the stone piers were laid consisted of huge piles of timber driven close together, on the top of which were laid planks ten inches in thickness, whereupon the bases of the stone-piers were laid, 3 feet below the starlings and 9 feet above the bed of the river.

It likewise appeared that the lowermost stones were placed with pitch instead of mortar. At that time the method of building within a caisson had not been adopted.

In 1280, only seventy years after its completion, the stone bridge had become ruinous. This was partly caused by a great fire, which, breaking out in Southwark, burnt a part of St. Mary Overy's Church, and a strong south wind driving the fire to the north side of the bridge, prevented the return of great numbers of people who had run from London to assist in extinguishing the flames, and when they attempted to get back, the flakes of fire had taken hold of the London side, and it is said that more than 3,000 persons either perished in the flames, or were drowned.

Edward I. granted to the keeper of the bridge his license to solicit charitable donations towards the repair of the bridge, but this proving quite insufficient, the king granted letters patent requiring that "every man on foot bringing merchandize or other things saleable, and passing over the said bridge, and he taking himself to other parts as aforesaid with merchandize or other saleable thing, pay one penny." A halfpenny was also charged for every saleable pack carried over the bridge.

This bridge would seem to have been doomed to misfortune, for in 1282 a frost, accompanied by a great snow, produced such floods and masses of ice, that five of the arches were broken down and destroyed.

King John, having taken the custody of the bridge from the mayor of London, and given it to Friar West, his royal successor claimed the disposal of it, and in the year 1269 Henry III. granted it, with its liberties, to his queen, who pocketed the profits, but left the bridge to fall out of repair.

Edward I. at the earnest intercession of the citizens, granted them repossession of the bridge.

In 1632, a fire destroyed the greater part of the houses on London-bridge: in 1645-6, those on the north side were rebuilt with timber, but were again destroyed by the Great Fire of 1666. The history of the bridge has, however, led us too forward, and we must go as far back as the year 1535, when, owing to the encroachment of buildings on the fresh-water streams about the City, a great want of water was felt, and many substantial citizens contributed towards a scheme for bringing water from six fountains in *the town of Tyburn*, which was carried into execution, and is the first instance on record of water being conveyed to the City by means of pipes.

In 1197 Richard I. had granted the following charter to the citizens of London:—

"Richard, by the grace of God King of England, Duke of Normandy, and Earl of Anjou, to his archbishops, bishops, abbots . . Know ye all that we, for the health of our soul, and for the soul's health of our father, and all our ancestors' souls, and also for the commonweal of our city of London, and of all our realm, have granted and steadfastly commanded that all wears that are in the Thames shall be removed wheresoever they shall be within the Thames; and that no wears be put up anywhere within the Thames; also, we have quit-claimed all that which the keeper of our Tower of London was wont yearly to receive of the said wears. Wherefore we will and steadfastly command that no keeper of the said Tower at any time hereafter shall exact anything of any one, neither molest or burden. . . . It is sufficiently given us to understand, that great detriment and discommodity hath grown to our said city of London, and also to the whole realm by occasion of the said wears." In consideration of this charter, the City paid the King 1,500 marks,—a large sum, but considering the importance of the grant, money well bestowed.

The jurisdiction of the lord mayor of London over the river Thames extends from Colneditch, a little to the westward of Staines-bridge, to Yendall or Yenleet to the east, including part of the rivers Medway and Yell; and his lordship has a substitute as water-bailiff, whose office is to search for and punish all persons infringing the laws made for the preservation of the river and the fish therein.

The lord mayor and aldermen hold courts of conservancy eight times in the year, in the counties of Middlesex, Surrey, Kent, and Essex, in order to maintain the rights and privileges of the river Thames; and to charge four juries on oath to make inquiry after all offences committed in the river, in order to proceed to judgment against such as may be found offending. There are many laws respecting the fishery and the preservation of the spray and spawn: the following are amongst the most important:—

"No fisherman shall use any net under 2½ inches in the mesh above Richmond-bridge crane, nor any net in the work called beating of the bush, flag, or reed, or less than three in the mesh; nor use any weights or stones to their nets, upon the forfeiture of 40s. for each offence.

That no pike-net or other net or engine be drawn over the weeds, &c.

That no fisherman shall bend any net by anchors across the channel, so as to draw another net within it, whereby the spawn of barbel or other fish will be destroyed.

That no person shall draw any net for salmon of less than 3 inches in the mesh, from the 10th of March till the 14th of September, from Kew pile westward to the City of London mark stone above Staines-bridge.

For each of these offences a fine of 40s.:—No person shall sell any fish contrary to the ancient assize—pike, 14 inches; trout, 8 inches; tench, 8 inches; roach, 6 inches; dace and flounders, 6 inches.

That every fisherman shall have in his boat both his Christian name and surname, and the name of his parish, legibly painted where any one may see it, on the forfeiture of 20s.

The water-bailiff appoints the proper season for fishing, and licenses are to be obtained for going to fish of the bailiff, at the chapel at Guildhall. The powers of search were very strict, and the nets, &c. of offenders seized, the fish distributed amongst the poor, and a forfeit of 20 marks."

Chamberlain, in his "History of London," gives a list of the fishes in the Thames as under:—"The salmon, flounder, smelt, shad, trout, graylin, perch, carp, tench, barbel, chub, roach, dace, gudgeon, pike, eel, lamprey [Pennant describes the catch of the latter fish as of the greatest importance, immense quantities being sent and exchanged with the Dutch fishermen for other descriptions of fish], bleak, ruffee, sturgeon, bass, mullet, turbot, sole, maid, place, dab, skate, thornback, halibut, pearl, whiting, haddock, oyster, muscle, cockle, bunter, crab, prawn, red and white shrimps, crawfish, and others."

In 1534 another Act of Parliament was passed for the better conservation of the river Thames; it was enacted, "That if any person or persons do, or procure anything to be done in the annoying of the stream of the said river of Thames, making of shelfs, by any manner of means, by mining, digging, casting of rubbish, or any other thing into the said river, or take, pluck, or convey any boards, stakes, piles, timber-work, or other thing from the said banks or walls, except it be to amend, and the same to repair again; or dig or undermine any banks or walls on the waterside of the Thames, &c. under a fine of 100s." And it was further enacted, "That if any person that shall have the office and ordering of ballasting of ships near the said river of Thames, and do not take for parcel of the said ballasting the gravel and sand of the shelves between Greenwich and Richmond within the said river," parties offending liable to be brought before the Lord Chancellor, and subjected to fine and imprisonment. Provision was made in this Act, that any person might dig, carry, and take away any sand, gravel, or rubbish, earth, or anything lying or being in or upon any shelf or shelves within the river.

In 1537, the common council of the city of London proceeded to carry out the above enactment, and parties were encouraged to take away materials from the "shelves or shelfts" within the river, and dispose of them at moderate prices; and it was ordered "that all paviours, bricklayers, tilers, masons, and all others that occupy sand and gravel, shall endeavour of themselves with all diligence to *occupy the said sand or gravel, and none other*, paying for the said reasonable, as they should pay, and ought to pay, for other sand and gravel digged from other men's grounds about the said city; that further application be made to his Majesty, that all persons having lands and tenements along the said river-side, shall well and sufficiently repair the same." Orders were also given that strong grates of iron along the said waterside, and also by the streetside, where any water-course is had into the said Thames, be made by the inhabitants of each ward, so along the said water, as has been in old times accustomed; and that every grate be in height 24 inches, at the least, as the place shall need, and in breadth one from another 1 inch; "and if occupiers of lands and tenements, in case of great rains, do sweep their soilage, or filth of their houses into the channel, and the same is afterwards conveyed into the Thames, every person so offending shall forfeit for each offence 1s. 8d."; and like penalties to be paid by all persons that burn ashes and straw in their houses, or wash in the common streets or lanes: persons having wharfs or houses by the waterside were ordered not to lay their refuse where the *rakers* accumulated matters to be conveyed away in boats.

Notwithstanding all these measures to purify the Thames, we read, in the London chronicles, of frequent and terrible ravages by the plague, sweating sickness, and other disorders. The Thames was then a pure and pleasant stream; yet still the plague raged and carried off thousands, and that at a time when the population of London was probably under 300,000 persons—not many more than the population of St. Pancras at present. This shows as clearly as anything can show that the purity of the Thames alone will not prevent the pestilence; for, notwithstanding the present deplorable condition of the Thames, by the introduction of drainage, and other sanitary measures, the health of the metropolis is now more certain, and the duration of life greater.

In 1574, a very high tide happened on the 6th November: after having ebbed about an hour, a reflux returned with such impetuosity, that the Thames, by filling the marshes and neighbouring cellars, did great damage.

It would have been well for many at the present time if the wholesome custom of the citizens of resorting to country springs, for the water supply of London, had been continued; but in 1582 a water-engine was put up by Peter Morris, a Dutchman, to supply London with water from the Thames. Even this engine, although it was afterwards improved by

* To be continued.

† See p. 375, *ante*. For "Conway-stakes," in last article, read Coway stakes.

several ingenious persons, was insufficient for its purpose, for we find Lilly, the astrologer, who had in his youth resorted to London in search of his fortune, going to the Thames, accompanied at times by city apprentices, to carry water from the Thames, in buckets, for domestic purposes.

In 1604, James I. granted a most important charter in connection with the river Thames to the corporation. This charter was an extension of that of Henry VIII. and confirms the right of the corporation to the conservancy of the Thames from the bridge of the town of Staines, and toward the east unto London-bridge, and from thence to Yendall or Yenleet, towards the sea and towards the east, and in the Medway,—the corporation to exercise the office of measurer of all kinds of salt, fruit, eatable roots, merchandizes, wares, &c. "And," says the charter, "notwithstanding they, the mayor and commonality and citizens of late times thereof, have been disquieted, and, in some measure, aforesaid, unjustly hindered, and especially in the said office of measuring coals, supposing that office to the mayor and commonality and citizens not to appertain and belong, whereas it doth manifestly and plainly appear that the said offices, and all other premises to them of old time belonging and do now appertain, and that they lawfully received and enjoyed, and ought to have taken and enjoyed the wages and rewards, fees, and perquisites thereof." This charter at considerable length confirms these various tithes to the city, and also directs the appointment of officers, bailiffs, &c. Next year the king borrowed 60,000*l.* of the city.

In 1606 it is recorded that the river Thames was frozen over, and had become a place of public entertainments and diversions; and on the 19th of February following, the tide ran so contrary to its natural course, that it was high water at London-bridge at the time it should have been low water. This preternatural tide, after it had ebbed half an hour, returned with such force that it arose 2 feet higher than at first. It gradually ebbed and flowed a second and third time, and then returned to its natural course.

1613 was a great year for London, for then Sir Hugh Middleton completed his scheme for supplying London with water from the New River. The difficulties and advantages of that important work are too well known to need mention.

By another charter of King James I. the corporation was empowered "to ask and demand, take and receive a fee of 8d. of lawful money of England to the use of the said mayor, &c. for the weighing of every such like ton of coales." This charter, among other matters, which it is not to our present purpose to mention, recites that no one "shall sell or measure coales from lighters, to the great harm and choaking up the stream of the same river, and the passengers on the water of the same river."

On the 7th of December, 1663, a flood of the Thames took place. Respecting this occurrence, Pepys, in his "Diary," says,—"6th. My wife all the afternoon at arithmetique, and she is come to addition, subtraction, and multiplication very well."

"7th. I hear there was last night the greatest tide that ever was remembered to have been in this river; all Whitehall having been drowned."

It would appear, that about the same time a raid was made against the wooden *causeways* on the river, &c. for Mr. Pepys says:—

"Home thinking to get Mrs. Knipp, but could not, she being busy with company, but sent me a pleasant note, writing herself, 'Barbary Allen:' a discourse about the river Thames. The reason of its being choaked up in several places with shelves, which is plain, is by encroachments made upon the river, and running out of causeways into the river at every wood wharf, which was not heretofore, when Westminster-hall and Whitehall were built, and Redriffe Church, which are now sometimes overflowed. These encroachments on the Thames along the line of London, have been very considerable; for Maitland is of opinion, that the houses of the City did not extend formerly, near so far south as the present wharfs do."

Mr. Pepys does not give us many other particulars respecting the Thames, except an account of its dismal appearance after the *Great Fire*—without churches from the Temple; when it "was fine to see the women sweeping up the water in the cannels," and getting so drunk; Mr. Pepys himself dirty, and not able to buy a pair of gloves. He proceeds, however, by the Thames to Blackwall, with property, and dines on cold mutton, being the first, as he says, he had tasted since last Sunday; forgetting, as his editor observes, the shoulder of mutton of the previous day.

Notwithstanding the efforts made at various times to prevent encroachments on the Thames, these would seem particularly at London to have been considerable, viz. from the original river wall to the present edge. Fitzstephen tells us, that there was a Tower Palatine on the east of the City, and two castles on the west; the first whereof was the square white Tower of London, built at the south-east angle of the City wall, and the castles on the west were those of Baynard and Mountfitchet.

"And, considering that the modern wharfs on the west side of London-bridge run into the river as far as the fourth pier of the said bridge—which piers being all erected in the Thames—I think they are sufficient to show, that the City wall could not extend so far south as the said wharfs do at present (1756), nor nearer the river than the north-end of the bridge adjoining to Thames-street. Wherefore, these wharfs must be so many encroachments on the river since the erection of (old) London-bridge."*

The Company of Watermen on the river Thames was established by Act of Parliament, in the 2nd and 3rd of Philip and Mary, wherein it is expressed that there shall be yearly appointed and elected by the mayor and aldermen of the city of London for the time being, the number of eight persons, "of the most wise, discreet, and best sort of watermen, being householders, and occupied as watermen upon the said river between Gravesend and Windsor.

* * * *

And the same and persons so elected, shall use, occupy, or exercise any rowing upon the said river of Thames, between Gravesend and Windsor aforesaid, which said overseers and rulers shall maintain good order and obedience amongst the said watermen, according to the true meaning of the present Act." A further enactment in the reign of William III. gives the body above mentioned authority to punish persons for throwing ballast, &c. into the river, and to keep a book for the true registration of all lightermen, watermen, &c. This company are more particularly under the dominion of the lord mayor.

Strype, the London historian, says that he was told by a member of the company that there were in his day (about a century ago) 40,000 watermen on the rolls of the company, and that upon occasion they could furnish 20,000 men for the fleet, and that there were then 8,000 in service.

In December, 1732, the river Thames rose with such a high tide that it overflowed Wapping, Tooley-street, and many other places, and did great damage to warehouses, &c.

In the 24th Geo. II. an Act for the better carrying on and regulating the rivers Thames and Isis, from the city of London westward, to the town of Cricklade, in the county of Wilts, the preamble sets forth "that the rivers of the Thames and Isis have time out of mind been navigable from London to Bercatt, in the county of Oxford, and from thence westward beyond Lechlade, in the county of Gloucester, and that by an Act of 21st Geo. I. intituled 'An Act for making the River of Thames navigable for Barges, Boats, and Lighters, from the Village of Bercatt, in the County of Oxford, unto the University and City of Oxford,' the said rivers were made navigable from the village of Bercatt to the city of Oxford, and that divers abuses had been and still are committed by the owners of the several towing-paths and other passages on the banks of the said rivers, and by the owners of the locks, weirs, turnpikes, dams, floodgates, and other engines thereon, by reason whereof, and other exactions, the price of water-carriage hath of late been very much raised," &c.

* Respecting the river wall, Fitzstephen, who wrote in the reign of Henry II. says that "the wall is high and great, well towered on the north side, with due distances between the towers. On the *south side also* the city was walled and towered; but the Fish abounding, River Thames, with his ebbing and flowing, has long since subverted them."

THE NEW DOCK OF THE COMMERCIAL DOCKS, ROTHERHITHE.

The rapid and extraordinary increase in the size of merchant vessels was rendering useless some of the old lock entrances in the Thames; to remedy which, and to give greater facilities to the Commercial Docks, and the trade of the port of London, this company, three years since, purchased the East Country Dock; and, under the plans of Messrs. Walker and Burges, engineers to the Admiralty, and the execution of Mr. Kelk, contractor, it has been enlarged and finished in the most efficient and satisfactory manner, exhibiting one of the best specimens of dock building now extant. Not long ago (Vol. XII. p. 625) we gave some particulars of its construction, and a sketch of the history of the docks.

This new or south dock is 27 feet deep below Trinity datum over the cill of the gate and throughout the dock. The lock is 220 feet long by 48 feet wide, and at the neap, or lowest tide, 22 feet deep, admitting vessels of more than 26 feet draught of water at spring tide, and the facility of lying at the quays at all times. It forms one of seven docks in connection, covering altogether 150 acres, of which about one-half is water.

On Monday last, the 13th, the new dock was opened, and at 2 p.m. two large vessels, the *Premier*, from Quebec, of 1,000 tons, and the *Oriental*, 1,640 tons, from St. John's, N.B. dressed with the flags of all nations, were towed to the lock-entrance, through which they were hauled into the dock, amid the cheers of the officers and labourers, and with a royal salute, the *Oriental* having the precedence. The cargo of the *Oriental* alone consists of 700 Petersburgh hundreds of deals, equal to 126,000 pieces, of 12 feet long by 11 inches wide, and 1 inch thick, and would cover 32 acres of ground, placed side by side.

These docks being on the south side of the river, are but little known to the public, though the oldest docks in Europe for commercial purposes. In 1660, they existed as Howland Great Wet Dock, and for many years were the only docks privileged for bonding timber in the port of London.

The directors have been exerting themselves of late, to make these docks more applicable to the increasing wants of the trade of the port of London, by augmenting their space of both land and water, giving greater depth, width, and length to the locks; and by a railway to the Royal Dockyard at Deptford, and connection with the Brighton and South-Eastern and South-Western Railways, forming a communication easy, rapid, and cheap, between the victualling yards of Deptford and Gosport. We saw a large Government transport taking in a cargo of provisions from the Company's warehouse for the Crimea, the authorities at Deptford having for convenience housed 15,000 barrels in these warehouses. This fact may perhaps influence importers of goods intended for Government supplies, to warehouse them in these docks, at least such as can be legally deposited there.

The warehouses of the company, besides the provisions noticed, have capability of holding 150,000 quarters of corn, as well as tar, pitch, hemp, oil, &c. Their ponds will float above 50,000 loads of timber, and their yards will hold about 4,000,000 pieces of deals, and staves *ad libitum*. We were shown a splendid granary, to hold about 15,000 quarters of grain, which was built thirty years since of Canada yellow pine, and appears to be as perfect as it was in the year it was built. This would seem to point out to her Majesty's Government and others the value of this timber, especially for military huts.

Huts for the Crimea.—Mr. Eassie, of Gloucester, is said to have contracted with Government for 500 houses for our soldiers, and 100 of a superior kind for officers.

CHURCH BUILDING NEWS.

Lincoln.—At the local burial board last week, the clerk stated the following as the items of expenditure on the cemetery:—Chapels, 1,500*l.*; lodge and dead-house, 400*l.*; drainage, formation of roads, walks, fences, laying out ground, planking, &c. 2,000*l.*; architects' commission (5 per cent.), 175*l.*; purchase of land, 1,125*l.*; Vicar of Canwick's right, 100*l.*; hearses, &c. 200*l.*; law expenses, premiums, and extras, 200*l.*; total, 5,700*l.*

Margaret Roothing.—The church of St. Margaret, Margaret Roothing, which had been closed for several months, for the purpose of undergoing extensive repairs and a thorough restoration, was re-opened for divine service on 2nd inst. The exterior walls have been stripped of plaster, and the original stone and rubble, with some stone tracery, brought to light. The Norman doorway has been cleansed. The inner walls have been freed from whitewash and faced with liquid cement. The whole has been repaved with Staffordshire chequered paving-tiles. The sittings in the body of the nave are new, of uniform height, size, and direction. The stonework, both externally and internally, has been refaced. An oak door has replaced the old decayed one, retaining the primitive iron work. The tiling has been repaired, and the inner roof has been cased with new wood of the ancient pattern. A new vestry-room has been built, and a stone wall round the south and east sides of the churchyard displaces the patched-up wooden fence. The surface of the churchyard, which had accumulated several inches above the level of the floor of the church, has been reduced to one uniform slope, care having been taken to retain each grassy mound, and repair the decaying tombstones. Two years ago, in consequence of its dilapidated condition, the wooden spire was taken down, and replaced by a small bell-turret. Mr. Dowsett, of Good Easter, was the contractor and builder employed.

Barnet.—Christ Church, Barnet, was re-opened on 3rd inst. The size of the church has been almost doubled by the addition of a north aisle, with a gable roof of nearly the same height as that of the nave. It has been carried out in accordance with the original style of architecture. The material employed is flint and stone quoins, buttresses, &c. The old and new parts are united by a line of decorated octagon piers and arches, with moulded caps and bosses. The design of the roof, unlike that of the nave, has arched principals descending low upon the walls and resting upon stone corbels. The whole of the timbers are exposed and stained, and the roofs are boarded diagonally. The two large traceried windows at the east and west ends of the aisle, and that in the chancel, and the western door, with its circular shafts, supporting a moulded and arched lobel, are chief features. There is extra accommodation for nearly 300 persons, allowing for each full 20 inches. The church is heated by hot water, and lighted with gas. The work has been carried out from designs by Messrs. Habershon, and executed by Messrs. Hill and Ladds, of Barnet. Both the parsonage and schools have been much enlarged by the same architects during the past year, the latter having been made capable of holding a large number of children. The cost of the new works has been nearly 1,500*l.* about 600*l.* of which have yet to be raised.

Farnborough (Kent).—The church of this village having been repaired and refitted, was reopened on the 8th inst. for divine service by the Archbishop of Canterbury, who also consecrated a new piece of burial-ground. We are told that while some portions of the work are of good character, others are less satisfactory, and this arises, we are further informed, from an architect having been consulted for one part only, and not for the entire work, a practice which must always result in incongruities.

Leigh.—The church here, during the last five or six years, has undergone much alteration and restoration. The east window has been taken out, and a geometrical one of five lights substituted. A gallery which obstructed the tower arch has been removed. The plaster ceiling of the nave has been pulled down, and the timbers of the roof opened to view. The southern wall and roof of the aisle have been rebuilt, the roof being open like that of the nave. The wall is of rubble-work, with squared stones for the buttresses and dressings. A south door, which had been blocked up in the old wall, has been reinstated in the new one, and the windows, buttresses, and other particulars, have been copied from their old predecessors. The chancel is repaved with encaustic tiles. A quantity of broken old tiles which formed the pavement of the chancel, and which are supposed to have been manufactured at an ancient tile-work at Malvern, have been laid in the aisle. The whitewash has been scraped off the walls in the interior of the church, and the work repointed, and coated with colour to imitate red stone. Crosses have been placed upon the gables. Mr. Harrington, of Worcester, builder, has executed the repairs; and Mr. Day, architect, furnished drawings. The expense of the improvements and repairs has been borne chiefly by the parish, but the rector has contributed towards the fund.

Clent.—A memorial of the late vicar, the Rev. A. Hopkins, is being erected in the church of this village. It is a mural monument in white marble upon a black ground, ornamented, and relieved by drapery falling in folds over one corner. At the top is an open volume, inscribed with the text from which the rev. gentleman preached his last sermon. Mr. Joseph Stephens, of Worcester, sculptor, executed the monument.

Tewkesbury.—The plans of the proposed new burial-ground and chapels have been exhibited at the Townhall here for the inspection of the ratepayers, previous to their being submitted to a vestry-meeting. They have been prepared by Messrs. Medland and Maberley, of Gloucester, and include two chapels, united by a central spire.

LONDON STREET ARCHITECTURE.

NEW BUILDING AT THE JUNCTION OF CHANCERY-LANE AND FLEET-STREET.

THIS building is erected for Mr. Hodgson, the book-auctioneer, from the designs and under the superintendence of Mr. Knowles.

It is appropriated on the ground-floor to Mr. Hodgson's auction-rooms, a law bookseller's, and a stationer's: the upper floors are intended for chambers and offices.

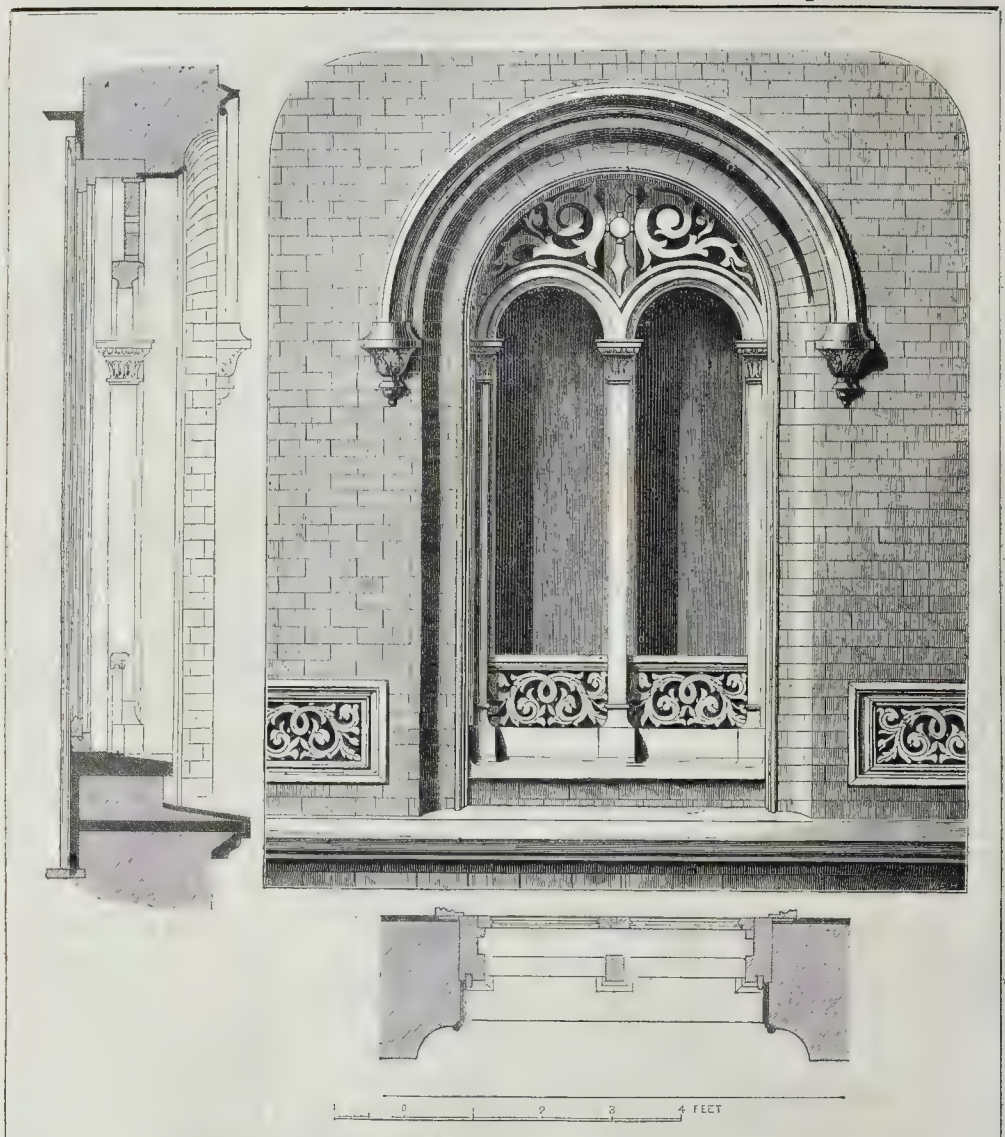
It covers an area of about 115 feet by 41 feet, and rises 60 feet from the pavement to the cornice. The level of the pavement falls, from the upper end in Chancery-lane, 16 inches to the angle of the building next Fleet-street.

It is constructed of Portland stone from the ground line to the first-floor level; above and below that of brickwork in Portland cement, the upper part being faced with white Suffolk bricks.

The great cornice projects 3 feet 8 inches from the face of the wall, and is corbelled back for a counterpoise, so that the mass carries itself, having cores of York stone brackets, which penetrate its whole height and breadth, resting upon a continuous York bed at the foot of the cornice. The cornice is of Portland stone, with the gutter hollowed in it. The roof is covered with the Italian tiling made by Mr. Brown, of Surbiton. The contractor for the work is Mr. Myers, of the Belvidere-road, and the whole cost of the building, when completed, will be about 15,000*l.*

In the design of this building, the architect has consulted but little that antiquaries' Bible, the book of "Styles." He has endeavoured to produce a building fit for its purpose and substantially beautiful, at the same time a business pile, and not a palace. It is a good step towards that goal which the commercial architecture of London may reach. Fleet-street and the Strand, transformed into a succession of such edifices, might become a worthy Corso for the trading Rome, and make a grand connecting artery between the region of docks and warehouses at one end, of mansions and palaces at the other.

A building of this kind will read, and read rightly: of how many commercial street edifices can we say the same? It is indeed time that the better elements of mercantile life be represented in its habitations. We have surely had enough of catchpenny advertisements done in stucco and paste. Sober, straightforward, not ungraceful nor uncomely, are the operations of upright tradesmen; so let their offices, warehouses, and shops, be truthful, substantial, cheerfully ornamental piles. Thought is not thrown away, lavished upon the improvement of our streets and mercantile edifices. A man will do his business with a healthier and clearer mind, surrounded by buildings of the class illustrated this week, than in such dens of darkness as line its next door,—Chancery-lane.



There is such correspondence between outward forms and shows and inner feelings and emotions, in all truthful matters, that it is far from an affair of indifference in what manner of form we transact our commerce, with what impress of form we endow our churches, or in what fashion of apartments we meet our friends and children. Providence has arranged this world upon these considerations (so to speak), and surrounded "the habitable parts of the earth" with cheerfulness and healthful beauties. We, who in our offices and ledgers have often little enough thought of Providence, shall we esteem it indifferent whether or not we follow His precepts here, where, perhaps, we need their healthful influence most?

To architects, at least, this question is not unimportant in an architectural point of view, for it is of such we speak: as a sanitary question these things are happily decided.

The importance of street architecture must be held in a very different estimation to what it has been by any one who hopes to assist in the revival of all architecture dead since the 16th century in our country. So truly is architecture a reflection and monument of a people, that never yet a work worthy the name of noble art was produced by a man not fulfilled with the spirit of his age; and for learning the character of our own day, where shall we find a better school than the streets and shops? We *are* a commercial people, a common-sense trading race, a nation of shopkeepers. But are these epithets, then, so damnatory? Enthusiasts for this or that opinion, and fanatics of this or that sect, may bewail the verdict which describes us; but he who can find in this judgment a brotherhood with the great republics of mediæval Italy, the commercial communities of Florence, Genoa, Sienna,—will perceive in the decision nothing but a source for the highest gratulation. We, too, shall have our di Lapo, our Donatello, our Bartolomeo,—perhaps our Savanarola. We, too, may become, amid this kaleidoscope Europe, a stand-point of light for the after times to reckon from.

But to achieve this we must recognise and know ourselves. We must develope and not conceal our nationality in arts as in all things else. From the streets of our cities and manufacturing towns our wealth and power proceed. Let these become the stepping-stones to our temples, as they must do, if our temples and our worship are to be sincere,—for "where the treasure is," was said of old by Wisdom. It is not by forgetting, but remembering our commercial real street life, that we shall become a people great in wisdom as in wealth. And, indeed, why should words be multiplied about the matter? It is from these things that we *are* growing a wise and (so much as there is of it) a holy people. From counting-houses, offices, warehouses, and chambers, come the schemes for baths and washhouses, and model dwellings, ragged schools, and reformatory asylums. These on one side, the genius of the shopkeeping people makes them: beyond them burns the glory of future England. What if, on the other side, those who have no work to do embroider mediæval patterns and multiply Gothic churches over the land? Let us be grateful that they do so much. By and by, when the people begin to go to church in earnest, as now to their shops, then, whatever "potichomanie" may be the fashion of the day, "*ça ira!*" for we shall no longer play at church in any sense or way.

But meanwhile we architects have work to do *en préparatif*. The public demands its streets and warehouses. Let us bear in mind how great these things are in their destinations; not truly *all* cheating, lying, and adulteration. Let us remember that we are building *streets* to-day, through which the future is to walk towards its *altars* and *shrines*, as the

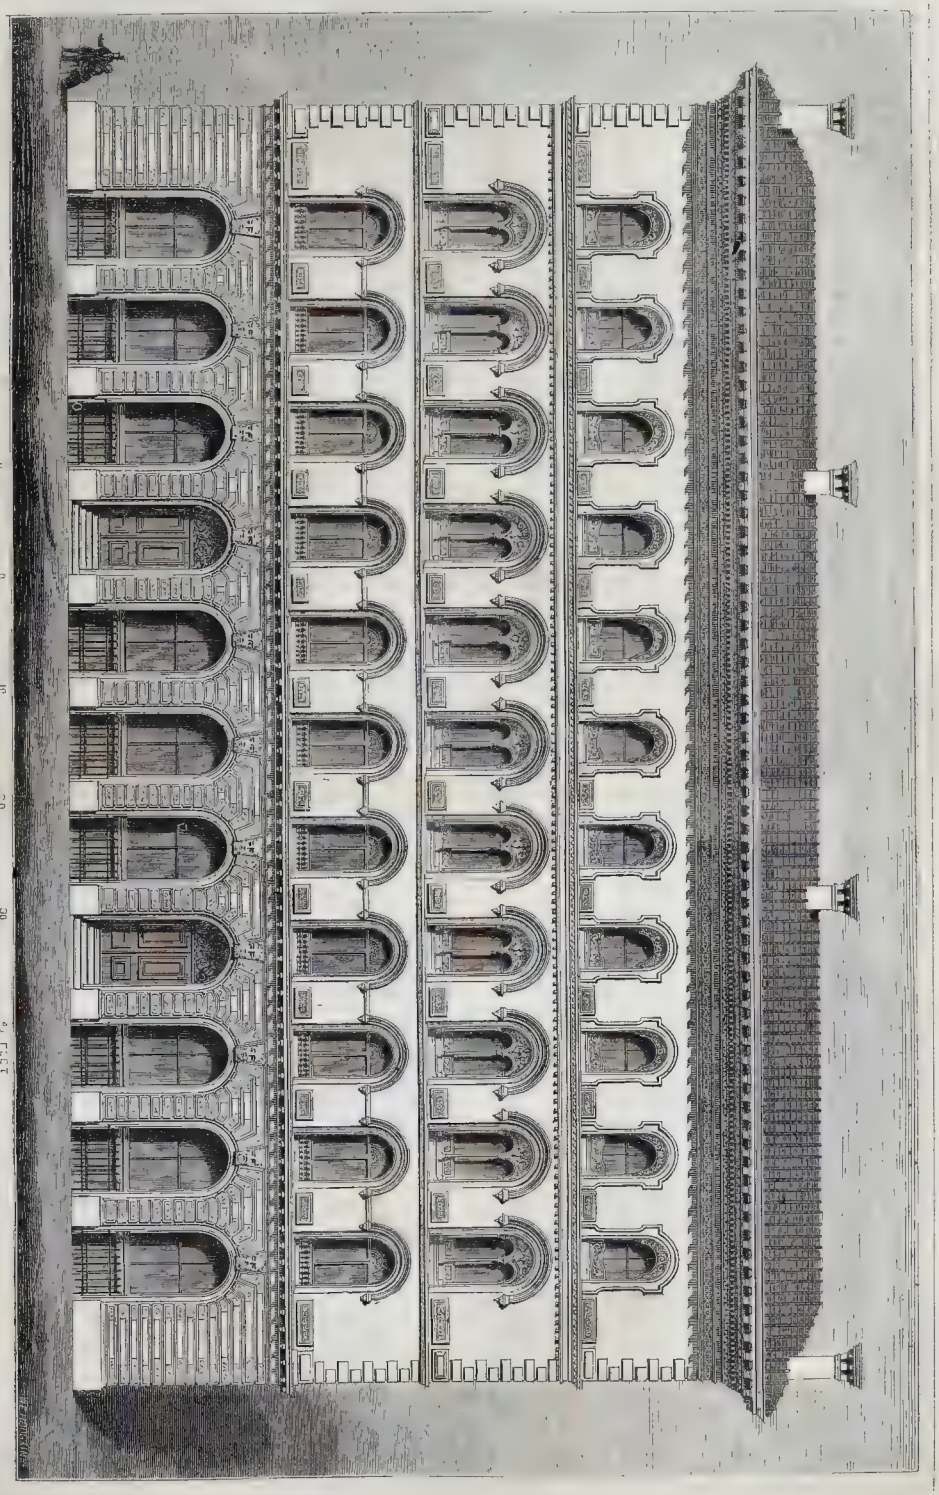
BUILDING, CHANCERY-LANE.—WINDOW, TWO-PAIR STORY, AT LARGE.

dwellers in these streets, in these cities, are preparing the paths of Truth by their duties and their charities.

Let us look upon these streets, then, in their noble light, and build as if building for honourable merchants, not for tricking knaves; and to give our minds a proper tone, let us discipline them to see in this shopkeeping what promise of greatness it encloses; and, recognising the nature of the time, perceive that it is in these very streets that the way is opened for us to commence our stone daguerreotype of the 19th century.

We architects are the limners for the future. To us is, perhaps, entrusted the verdict which remotest time will form. All else will go, as it has gone, of art and man's productions. But architecture, that substitute for nature, is nourished by Time, as the fossil history of mankind; and as the shells which the nautilus and ammonite of the primæval world have formed become to us the sure records and interpreters of their far-departed times, so these shells, under which humanity has dwelt, which religion has formed and inhabited, will become, may be, to future races, the only and fossil records whence the "epoch of man" shall be clearly read.

For us, then, who have to mould these latest "medals of creation," there is the responsibility that we rightly represent our race, our age: it is not, surely, all a lie. We forge the long chain of antique history link by link, almost entirely from architectural remains. From these we deduce a people and a history, which we read for our edification, instruction, *example*. How much lies at the door of those architects of old!



Regarded in this religious light, the only art in which art was ever noble, a little study will soon disclose to us what valuable and unique opportunities street architecture affords in our time.

There are yet other higher views under whose radiance the architect begins to perceive of what influence, of what responsibility, his works consist. But the consideration of what and how great effect upon the mind external objects exert is reserved for another occasion.

Perhaps enough has been said to show that there are points of view from which street architecture may be considered as a higher thing than an advertisement; that the streets are peculiarly the field wherein the character of our own time is forming, and, therefore, peculiarly the best school for the architect who is not also a liar.

James Knowles, Jun.

Cirencester.—The Roman Pavements.—The spacious building situated within Earl Bathurst's park, immediately opposite the railway-station, destined for the final reception of these valuable remains, is now completed, and the pavements, under the superintendence of a foreman from the encaustic tile manufactory of Messrs. Minton, have been laid down. It will be some time before the floor surrounding the pavements can be added and the whole made perfect. Cirencester is rich in remains of the Roman time.

NEW BUILDING, CORNER OF CHANCERY-LANE, LONDON.—Mr. Knowles, Architect.

THE ARCHÆOLOGICAL INSTITUTE AT SHREWSBURY.

When the curtain rose at Shrewsbury, that is to say, when I arrived, I was forcibly reminded by the old domestic architecture of this place, of the scenery at the Princess's Theatre, in the play of Henry VIII.; but it was seen through a much more gloomy atmosphere than that which shines on the gay costumes of those in the mimic scene, and as I proceeded through the heavy rain that was falling, I could not help feeling, notwithstanding the object of my visit was to admire the records of the past, that my mackintosh and cork soles were much more serviceable, though perhaps not quite so picturesque, as a velvet jerkin, with red hose, and russet shoes. The wet seemed to forbode a gloomy meeting, but the result has not proved so, and the visit to Shrewsbury must be remembered by the members of the Institute as one of if not the most successful meeting they have had. I do not mean only in connection with the hospitality we have received, but the proprietors of all the places and objects that we have visited have, I am certain, been induced to estimate more highly the monuments they possess, and will endeavour to preserve them with more rigorous care and attention.

On Monday evening, the inaugural meeting was a very brief affair, but the mayor received us with such sincerity, that we felt quite at home; and he promised us the hospitality for which the county has ever been famous. On Tuesday morning, the sections were opened, and a paper by Mr. Salt, on "The Honour of the Hundred of Clun," was read by Dr. Kennedy. It gave evidence of great research, but it was rather too heavy for a commencement, and I am afraid gave strangers the impression that we were rather a dull, dry set. This was followed by an interesting paper by the Rev. J. L. Petit, on Buildwas Abbey, which prepared us for our visit to the ruins on the following day. After this we started for Hawkestone, where we had been invited by our patron, Viscount Hill. A very heavy rain was falling at the time, but no one was daunted, and our determination was rewarded by a few glimpses of sunshine, which enabled us to enjoy the extensive views and picturesque beauty with which this place abounds. On the road we visited Morcton Corbet, an ancient mansion of the family of Corbets. We left Hawkestone much delighted by the kindness and *bonhommie* of Sir Robert Hill, who received us in consequence of the absence of Lord Hill. In the evening there was a sectional meeting, at which Mr. J. M. Kemble read a paper on "The Heathen Graves of the North of Europe," and in which he made a furious onslaught on the theory of the stone, bronze, and the iron ages; but as this paper will be published as well as that which he subsequently read, it will not be worth while to occupy your space by noticing its novelties.

On Wednesday we started for Wroxeter, and the remains of the Roman city of Uriconum. The Rev. H. M. Scarth, who had formerly been curate at this place, gave us the benefit of the result of his researches during his residence. The remains of the Roman wall attracted much attention, and the fragments of columns that have from time to time been turned up, show that there is a most interesting field of inquiry that would, without doubt, repay a more extended inquiry than that which Mr. Scarth was enabled from his position to make; but as I before said, I hope that our visit may be effective in awakening the interest and curiosity of proprietors. From thence we had a beautiful ride to Much Wenlock, much in these parts meaning great. Here we were received by the mayor. The Rev. C. H. Hartshorne pointed out the striking features of the abbey, and the members occupied themselves by examining its details, and in speculations on its various parts. After this we proceeded to a bountiful lunch, which had been provided for us, and of which we partook under the presidency of Mr. Dickinson, the mayor. The Town-hall possesses great interest. It is a wooden building in a perfect state of repair, and the interior reflects great credit on the town, for the preservation of the old wood-carving, and for the judicious manner in which the additions have been made to it. The Council Chamber is quite unique, and the whole building will well repay a visit to any one desirous of seeing what a Town-hall was in the olden time. After viewing the Museum, in which were the corporation plate, and several deeds and charters connected with the town, we proceeded to Buildwas Abbey; but the weather which had favoured us thus far, became very unpropitious, and Mr. Petit had to illustrate his paper of the previous day amidst a forest of umbrellas and the pelting of a pitiless shower. The way in which these ruins are preserved was the source of great satisfaction. On our return the members visited the seat of Mr. Robert Burton, where the members were entertained at dinner with real old English cordiality; and lest the presence of so much science should produce *ennui*, he had invited many "fair women and brave men," and "there was a sound of revelry by night," in consequence of which some of the lighter-spirited members of the Institute did not get to their beds till a very late hour.

On Thursday morning there were sectional meetings. Mr. R. K. Penson read a paper on Ludlow Church, which he concluded by expressing his regret "that the inhabitants did not display more care in the preservation of their church,"—a remark which an ill-natured writer (I am not) would say, might have been left to some one else, as he is not quite a disinterested person, having been employed to "restore" the reredos which was accidentally discovered by Lord Dungannon. And I may as well here mention, that he took occasion, on our visit to the church the following day, to dwell on the remark of one of the members, "that restoration was often destruction;" and to my mind (perhaps I may be very wrong), I think the reredos in question is a confirmation of the assertion, and I would rather have seen it in its fragmentary state, than filled up with statues that can be bought by the dozen.

Mr. M. H. Bloxham then read a paper "On St. Mary's Church, Shrewsbury," which will have the effect of calling the attention of the inhabitants to its beauties, and teach them to value what they possess. Mr. George Scharf, jun. read a paper "On the Pictorial Decoration of Ancient Churches," and another brief essay "On the Painted Glass in St. Mary's Church." He was clear, fluent, and instructive, and in the peripatetic lecture at St. Mary's Church, where he pointed out the principles which he had previously enunciated, he proved himself the very Willis of the meeting.

Papers were also read by the Rev. J. G. Cumming, "On certain British and Scandinavian Crosses in the Isle of Man, hitherto undescribed," "On the Roman Vestiges at Wroxeter," by the Rev. H. M. Scarth, and "Some Notices of Church Goods belonging to the Churches in Shrewsbury at the Time of the Reformation," by Mr. Hunter. After these, the Institute received deputations from the Historic Society of Lancashire and Cheshire, and the Cheshire Architectural, Archæological, and Historical Society, when kind expressions of intention and mutual interest were reciprocated.

In the evening, the annual dinner took place in the Music Hall. About 200 sat down, under the presidency of Lord Talbot de Malahide, who was supported by the Earl of Powis, Viscount Dungannon, the Mayor, and some other magnates. The dinner did not present any remarkable feature, and the speeches did not possess such originality as to make us forget that they were a little too long.

The museum was shown in a very appropriate gallery belonging to the school. Dr. Kennedy, the head master, who has taken the most lively interest in our proceedings, invited us in the evening to a *conversazione*, and on our arrival we found the museum lighted and the library tastefully decorated, with a band of music in attendance. As a tribute to antiquity, the evening's proceedings commenced with a country dance, in which the President and others joined. This afterwards gave place to polkas and waltzes, which were joined in with great spirit by the younger votaries of archæology. We all left greatly impressed with the kindness of Dr. Kennedy, and convinced that the eulogiums on his good nature which we had heard at the dinner were as much deserved as his distinguished position is from his great ability. On Friday morning we started by a special train to Ludlow, viewing on our way Stokesay Castle, a beautiful castellated mansion, which has been illustrated in Britton's "Domestic Architecture," and in the first volume of Parker. Great pains had been taken to put it into a proper state for our visit; and the thanks of the Institute were subsequently voted to Mrs. Stackhouse Acton for the excellent way in which it had been done. Mr. Hartshorne called our attention to several circumstances and facts in connection with the building, and the appropriation of its date. From Stokesay we went to Bromfield and Stanton Lacy. At the former place there was absolutely nothing to see except a few abominations, such, for instance, as the painted or rather bedaubed ceiling; and at the latter the church has been "restored," with a stone altar in the regular "high and dry" style, and with all that Minton and others can supply. A discussion arose on the outside about some "long and short work," but its authenticity was very much doubted, seeing what great alterations have been made in the structure. After a beautiful ride we arrived at Ludlow, where we were entertained by the mayor, Mr. Rodney Anderson. Having partaken of the good things provided by him, we proceeded to the church, where we were addressed by Mr. Penson, to whom I have before alluded. After this we proceeded to the Castle, a magnificent ruin, and well worthy of a pilgrimage even made under less favourable circumstances than those we experienced; and the impression made on my mind by the visit to this spot will not be easily effaced. In the evening the mayor of Shrewsbury invited the members of the Institute to dine with the members of the corporation, and we thus had an opportunity of observing how the civic dignity of this ancient town is maintained. On Saturday there was another sectional meeting, at which Mr. J. M. Kemble read a paper, in continuation of the subject he had previously treated. It displayed great research, and much of that analytic criticism, which distinguishes the German school, and which he has doubtless acquired a taste for from his residence in Hanover. He demolished some of the pet theories of our old antiquaries in the most relentless manner. The Celts, to use a sporting phrase, were nowhere, his statement being, and for which he quoted many authorities, that those implements of bronze which we are in the habit of considering vestiges of that race, were the production of the Iberians, for the reason, among others, that they were a race that "knew no other metals but copper and gold." His propositions would have inspired more consideration, and, perhaps, more faith, had he not, in the discussion that took place, "snubbed" everybody, from the president downwards.

After this we proceeded on an excursion to Battle-field, the site of "the great battle of Shrewsbury, July 21, 1403;" and from thence we proceeded to Haughmond Abbey, on the estate of Mr. A. W. Corbet, of Sundorne Castle. The remains, which are situated in a most picturesque spot, have been much neglected, but the announcement of our visit had caused them to be cleared of all the objectionable adjuncts. Several excavations had been made by one of our members, Mr. Baker, by which we were enabled to get a general plan of the abbey. Nothing could exceed the kindness of Mr. Corbet, who very happily said, "that as it was the custom in the olden time for the abbot to entertain all travellers, he, as the possessor of the ruins of the abbey, felt it his duty to give us all a hearty welcome." After partaking of a very elegant lunch, we were delighted to see that the good old English gentleman, "Though he feasted the rich, he ne'er forgot the poor;" for while we were pursuing our searches, for objects in illustration of other pursuits, the charity children were entertained, and their cheerful faces and red cloaks, while they added to the picturesqueness of the scene, made us estimate more highly the bounty of the lord of the soil. And, while on this subject, I cannot help expressing my gratification at observing in the play-ground of the school,—which, I believe, Mrs. Corbet takes under her especial charge,—many objects, such as "swings, round-abouts,

and see-saws,"—thus contributing to the children's amusement, and not making school a place to be dreaded.

On Sunday the majority of the members met at the Town-hall, and went to church with the mayor.

On Monday we started in a special train, and after visiting Whittington Castle, we proceeded to Park Hall, a beautiful house, built about 1550, and which Nash has illustrated. Mr. Caton, who was the representative of the proprietor, Mr. Kynsbint, received us at the station, and conducted us to the house. The whole of the mansion is in the most perfect keeping: the only thing to suggest, perhaps, would be a little attention in the way of repairs and varnish to the outside, to repel the encroachments of time. We left highly delighted with our visit, and much impressed with the graceful courtesy of the ladies of the establishment, whose attention was in unison with everything around us. To Mr. Caton too much praise cannot be awarded, for he was our harbinger, and the great success of the excursion was owing to the excellent arrangements he had previously made. We then proceeded to Chirk Castle, the seat of Colonel Middleton Biddulph. We were struck by the grandeur of the view, more than by the architecture, which has been restored. But if we were indifferent to the exterior, our horror was great at the interior. Ionic columns, supported on deep blue balusters, led us into a room the walls of which were bright green and gold, and the ceiling of bright blue. It was stated that it is a moot point whether the responsibility of these decorations rests on Mr. Pugin or Mr. Crace: whichever way the question is settled, the result will certainly bring no fame to either.

We did not go to the seat of Lord Dungannon, but proceeded by the train to Llangollen-road station, where we entered a canal-boat, which had been kindly lent to us by Mr. Shipton, the mayor of Wolverhampton. The ride was charming and novel; and, having partaken of refreshment, which the foresight of Mr. Caton and the skill of mine hostess of the "Hand" had provided for us, we proceeded to the Abbey of Valle Crucis. Many excavations and clearings have been made by Lord Dungannon, of which there is notice given to the visitors on a very fine slab, inserted in the walls. Having examined the beauties and the peculiarities of these remains, among the former of which is a circular window, and the latter a buttress, running round the windows at the exterior of the east end, we returned to Shrewsbury. The next morning the usual meeting took place for auditing the reports, and other business, and thus concluded this most delightful congress. I cannot conclude without offering a tribute to the mayor of Shrewsbury, Mr. Butler Lloyd, whose buoyancy of spirit and untiring energy contributed so very much to our success, offering to other authorities a proof that to be dignified it is not necessary to be dull.

With all this pleasure, however, there was this alloy. My hotel was dirty and disagreeable; and I mention this to enunciate a crotchet that I have, viz.—that I consider the magistrates of any place would be justified in refusing a license to any house of which such a character as this is given. If I go to the British Emblem, whose license is a monopoly, and experience vile smells, an animated bed, dirty rooms, and bad attendance, it, to my mind, much more fully embodies the notion of a disorderly house than one the proprietor of which supplies a little beer after the regular hours. This, however, is only a whim of mine, but I hope it will be long before I have it brought to mind by such discomfort as that I experienced at Shrewsbury.

Filtration by Atmospheric Pressure.—Mr. Partington, in one of his late lectures in the Royal Panopticon of Science, Leicester-square, pointed out a new description of filter, of which, hereafter, important use may perhaps be made. A pint of water, dark and turbid, was poured into a glass vessel, and in an instant it was poured forth pure as crystal. This very rapid process of filtration was produced by atmospheric pressure on the water; and it was stated that a thousand gallons might be filtered by the same process in an hour.

PROVINCIAL NEWS.

Oxford.—During vacation the works in progress in connection with several of the colleges have been progressing. The most extensive of these is the erection of a new building in connection with Exeter. The whole of the Broad-street frontage is now complete to the roof. The additions completing the line exhibit a studied irregularity in the arrangement of the windows, &c. At Jesus College the work undertaken is the refacing of the frontage. The second story is completed. The gateway has been pulled down, the plain windows knocked out, and the whole is being restored in what may be called the House-Gothic style, so generally adopted by the colleges now. It dates from Elizabeth, and its chief characteristic is the square mullion and the depressed arch. The only other works in progress are those of Magdalen, confined to the range of rooms on the High-street side of the tower: these are being reroofed, put into repair, and otherwise improved.

Hook-Norton.—A new National School has been commenced here, from a design by Mr. Bruton, of Oxford, architect. For this the village is chiefly indebted to Miss Davis, daughter of Mr. Samuel Davis, of Swerford-park, who has given the site and two-thirds of the requisite sum of money, and who lately laid the foundation stone. The building will comprise a school-room for boys and girls, 36 feet long by 16½ feet wide, a class-room, and a room which, together with the class-room, will form a boys' school on Sunday, when the usually mixed school-room will be appropriated to girls alone. A mistress's house and the necessary offices complete the group.

Cradley.—A new building for a girls' school has been commenced by direction of the Bishop of the diocese. The rector presented the site.

Bromsgrove.—Catshill Schools, intended both for general use on Sundays, and for teaching infants on other days, were opened on Wednesday week. The builder was Mr. Freeman, of Belbroughton. The estimated cost of the whole is 500*l.* about two-thirds of which have been raised by subscription, leaving a considerable sum to be provided.

Corse.—The opening of the New National schoolroom at Corse took place on 2nd instant. This little schoolroom has just been constructed under the superintendence of Mr. A. McGachen, architect. The school children are sixty in number.

Grimsby.—The local board, by the Improvement Act, have powers granted them to raise and expend 15,000*l.* on market improvements, a cemetery, and a new town-hall. To carry them out fully, according to the *Lincolnshire Chronicle*, an expenditure of 18,883*l.* will be required. Property has already been purchased from Lord Yarborough for market improvements, and for which 4,231*l.* have been paid. The new market-house and corn-exchange will cost 3,500*l.*: the old materials are set down at 700*l.* It is in contemplation to lay out 600*l.* in improving the market at the lower end of the town. The new town-hall, with police-offices, &c. is set down at 3,000*l.* The cemetery has cost 2,300*l.*

Gateshead.—The local *Observer* says,—It is seriously contemplated, we understand, to establish several new boards of health in this borough, in the shape, *not* of town councillors, police constables, or anything of the sort—but in that of veritable *boards*—deal boards—on which the sanitary inconsistencies of the population may be chalked daily;—on which the middens which require to be emptied—the houses which require to be drained—the pigs which require notice to quit—the quagmires which require to be filled up—the slaughter-shops which require to have their bloody deeds concealed—may be duly recorded for the edification of the authorities, and as warnings to the unwary passengers in our thoroughfares. Thus, each street, every morning, will have its magazines of pestilence pointed out, so that nuisances, if they may not be removed, may, at least, be avoided. We commend the project, and recommend its adoption in other towns than Gateshead.

Corby.—Mr. W. H. Woodhouse, of Irnham Hall, has, at his own expense, conveyed through the centre of this town a flow of spring water, which is supplied by three self-closing hydraulic pillars. A pillar is to be placed in the market-place, surmounted by a lamp, to be lighted in the winter months. The works have been under the management of Mr. John Tebbutt, of Sleaford, engineer.

Elgin.—The *Forres Gazette* states that Mr. Goodwillie, sculptor, has just finished a suitable tombstone, to be placed over the remains of the late Mr. Thomas M'Kenzie, architect, in the cathedral burying-ground at Elgin. It is a free-stone slab, 7½ feet long by 3½ feet broad, bordered by Gothic ornaments, and bearing the following inscription in old English characters, in Mediæval style, running continuously round the stone:—"Sacred to the Memory of Thomas M'Kenzie, Architect in Elgin, who died at Ladyhill on the 15th day of October, 1854. Aged 39 years." The slab rests on two Gothic pillars, carved. The design is by Mr. James Matthews, of Aberdeen, architect.

THE NEW METROPOLITAN BUILDING ACT.

The new Act to amend the laws relating to the construction of Buildings in the Metropolis and its neighbourhood, has received the royal assent, and will come into operation on the 1st day of January, 1856. Fears are entertained as to the sufficiency of the legal machinery for carrying out its requirements, but we will not foreshadow difficulties.

We shall next week give the new Act *in extenso*, without trenching on our usual amount of matter. To prevent disappointment, we would suggest an early order through the booksellers, on the part of those who do not receive our journal regularly.

THE LEWISHAM DISTRICT.

The district of Lewisham, so far as respects the Metropolitan Building Act, appears to be left in a very unsatisfactory condition. It will be remembered that on the information of Mr. Willoughby, to the effect that the district surveyor, Mr. Badger, had demanded and received a fee to which he was not entitled, the Justices of the Peace for the county of Kent dismissed the district surveyor from his office. Mr. Collis was appointed surveyor, *ad interim*; and afterwards the justices elected Mr. G. B. Williams, to fill the declared vacancy. Mr. Badger then obtained a rule *nisi* for a writ of *certiorari*, to bring up the order of the justices to the Court of Queen's Bench. Mr. Pashley (Q. C.) showed cause against the rule on the 13th of June, but the Court made the rule absolute, Lord Campbell remarking, that the questions raised were of considerable importance. This was at the end of the term, and the matter consequently stands over until November.

As no appointment of a surveyor is valid until ratified by a Secretary of State, the dismissed surveyor memorialized that officer, stating the circumstance that the writ of *certiorari* had been granted, and he received for reply,—that, pending the decision, the office would not be considered as vacant. Upon this the surveyor was advised, that it was his duty to discharge the duties of his office, and accordingly, amongst other steps, he summoned a builder a few days ago, for not giving him notice.

The builder's defence was, that he had given notice to Mr. Collis, and the magistrate considered it sufficient.

The result of this unfortunate state of things is, we are told, that some of the builders pay no attention to any one, and that irregularities are committed.

The Decorator of the Byzantine-court, Sydenham.—I am much obliged to your correspondent ("C F. jun."), for pointing out that the expressions contained in my paper on "Polychrome" tended to convey the erroneous impression, that the decorations of the Byzantine and Mediæval Courts were entirely designed by me. I must say, by way of explanation, that the word "designs," when used by me, had reference only to those ornaments that I had to design, in order to carry out fully Mr. Wyat's general scheme. I trust that this explanation will satisfy you.—R. P. Pullan.

DOINGS IN IRELAND.

The church of Lisadell, County Sligo, is to be rebuilt.

A new court-house for the county Down is to be built at Downpatrick. The style is Italian, with Corinthian pilasters on the front elevation, surmounted by a pediment, with figures on the acroteria. The interior is approached by two flights of steps, and comprehends a large hall, off which the various committee, jury, petty jury, and other apartments branch. Mr. Smith, county surveyor, designed the building.

The new parish church at the south end of Castle-street, Ballymena, is completed. It will accommodate nearly 1,000 persons. All the windows are stated to be of stained glass.

A new Protestant hall is about to be erected at Limerick, and tenders are being received. Messrs. Fogerty and Son furnished the drawings.

Extensive works are to be executed in connection with the church of Drumholm, county Donegal.

Additional buildings for the accommodation of officers are to be erected at the new barracks, Limerick.

The Board of Ordnance intend erecting, on the Curragh of Kildare, one hundred and six wooden buildings, for constabulary schools, married soldiers, &c. These structures, which have been for some time in progress, are nearly complete. The officers' quarters, without offices, are ready for occupation. The 60th rifles, County Dublin, and North Cork militia, &c. are at present encamped there.

A new Roman Catholic church is to be built at Tipperary.

A new banking-house is to be built at Skibbereen, County Cork, from the designs of Sir John Benson, architect.

Moyrus, County Galway.—The church lately erected in this wild, romantic spot, was consecrated on Tuesday, 31st July, by Thomas Lord Plunket, the Bishop of Tuam. The funds for the building, together with those for the parsonage and schools adjoining, have been raised from small subscriptions by the untiring energy and perseverance of Miss Moore, of Lisburn. The style attempted is English Gothic, of the twelfth century, and has been carried out in granite, quarried on the site, dressed with the beautiful grey limestone peculiar to the neighbourhood, and red bricks. Near the site are the remains of a church, apparently, according to our informant, built in the eleventh century. The new buildings cost 1,700*l.* General Thomson, of Salruck, gave the site. Mr. Minton —always generous—presented the tiles for the chancel. Mr. T. H. Carroll, of Dublin, was the contractor, and Mr. Lamorock Flower, of London, the honorary architect.

COMPETITIONS.

Saffron Walden Cemetery.—The design of Messrs. Middleton and Pritchett, of Darlington, has been elected for execution.

The Barracks' Competition.—We continue to receive strong objections to the notice, that "*all plans sent in will remain the property of the War Department.*" As we have already said, it is a very unfair requirement, and ought to be abandoned forthwith. The premiated drawings alone should be retained.

Blandford.—Sir,—It was stated in the last number of the *Builder*, that Mr. Pinch's designs had been selected for the chapels in Blandford Cemetery. I beg to say that, at a meeting of the Blandford Burial Board, which Mr. Pinch attended, on Wednesday, 1st August, it was resolved that the designs of Mr. James B. Green, of Blandford, should be adopted, in reference to those by Mr. P., and he (Mr. Green) was instructed to prepare the specification and detail drawings, which are now open to builders.

An Observer.

*** All we need say is, that the statement in question came to us as from Mr. Pinch himself.

Another correspondent, "E. E. Pennington," complains of the conduct of the Board to him. He says,—"On the 19th of July, I received a letter from the clerk to the Board, apprising me of the acceptance of my designs, subject to the following conditions, viz. :—1. A complete set of working drawings to be furnished, with divers alterations from the original plans. 2. A detailed specification to be forwarded, so as to enable the Board to advertise for tenders. On furnishing the above, I was informed I should receive the munificent sum of 10*l.* the premium advertised. I of course at once declined these humiliating terms; but thinking the Board might possibly err from ignorance of the usual professional charges, I wrote and offered my services at the usual rate of 5 per cent. on the outlay, and my travelling expenses. By the next post I received a letter from the clerk to the board, expressing the regret of the borrd that they could not avail themselves of my proposals, and the same day I received my drawings, without even the carriage having been paid."

MASTERS AND WORKMEN.

In your last impression there is a suggestion offered by a builder's clerk, which if carried out I think would be of great advantage to all parties concerned, but especially so to those who ought to have the benefit, viz. really *deserving* workmen.

The present mode amongst builders of engaging workmen I think must be held to be very objectionable, inasmuch as the able, industrious, sober, and civil mechanic, in offering his services, has no advantage over a fellow workman possessing the very opposite to the necessary qualifications above mentioned. I think with your correspondent that it would be a better plan if each workman, in offering himself for employment, had to produce a written character from his last employer, bearing testimony to the applicant's ability, regularity, sobriety, civility, &c. and stating the length of service. This would enable an employer to select the best men, and would serve to encourage good conduct in all.

I also think the present custom of masters and workmen separating without a moment's notice disadvantageous to all, and especially injurious to the employer when men work in pairs, and one leaves suddenly, as mentioned by the builder's clerk in the case of bricklayer and labourer: to the great evil of this I can speak from personal experience, having often had to submit to the inconvenience and loss that always ensues. To remedy this, I would propose that three days' notice be given on either side, and such time in all cases to expire at the end of the week.

I, like your correspondent, see no difficulty in carrying out such a measure, provided it become general in the building trade, and be made to apply to all branches of it alike.

A Builder.

Notices of Books.

Paper and Paper-Making; Ancient and Modern. By Richard Herring: with an Introduction, by the Rev. George Croly, LL.D. London: Longman and Co. 1855.

Wonderful as the progress of paper manufacture and its correlatives, book-making and the printing-press, have been from the period when fifty years of a man's life were spent merely in making a single copy of the Bible, down to the present day, in which a copy of this book of books is printed by one machine in a single minute, and in which, accordingly, the divine command to teach the Gospel to every people is obeyed (to adduce but a single instance) by the British and Foreign Bible Society, in their annual issue, in nearly 150 known languages, of an average circulation of a copy for every minute of every hour and day throughout the year,—we do not seem to have reached the climax of at least the paper manufacture, inasmuch as there now seems a pretty fair prospect of an entirely unlimited supply of paper from the most abundant and otherwise most valueless sources, as from wood-shavings, and even from peat-turf, by means of simple enough and seemingly cheap enough processes, of maceration with alkalis, washings with chlorine, muriatic acid, and pure water, and pulpification (if we may use the term) by means of new applications of alkali, or otherwise. By such means, paper, pasteboard, *papier maché*, and other forms of the material will soon probably be had at a still cheaper rate, and in immensely more abundant quantity than heretofore. Architectural decorations in *papier maché* will probably become more general, paper-hangings for cottage walls be improved in design and yet not increased in price, less fragile copies of sculptured art works than those of plaster of Paris be multiplied, and many other art improvements be effected.

The subject of paper-making is an interesting one, and the author of the volume under notice has had the benefit of the experience of his father, extending over a period of nearly half a century, to enhance the interest and importance of what he has to say on the subject. The treatise itself is an extension of lectures recently delivered at the London Institution, and it is graced by an Introduction from the pen of Dr. Croly, in which that reverend writer gives an eloquent exordium in favour of the press of England. The work is also illustrated with various engravings, and an appendix of leaves forming numerous specimens of paper, fine and coarse, with ornamental and other water-marks, &c. and the whole constitutes a very interesting volume, in which the history of the paper manufacture is traced from its more primitive antetypes, through its own earlier progress, onwards to its most recent improvements.

Miscellanea.

The Yarmouth Surveyorship.—Mr. Laing, C.E. has resigned his office of town surveyor at Yarmouth. The office will be vacant in November next.

Derby Baths and Washhouses.—The town council have adopted the plans of Mr. Henry J. Stevens, of Derby, for converting an old house in Full-street into baths and washhouses, and he has had orders to advertise for tenders.

Stone for Doncaster Church.—So important does it seem to the owners of stone quarries, to have the use of their particular stone at an important building known, that the little paragraph on this subject in our last number but one (p. 371), has brought us nearly a dozen letters, and cost us the writing of three. Mr. Rutherwood, of Worksop, denies that the stone used is from the quarries of Mr. Wilson, saying, that it is supplied by him. On referring to Mr. Wilson, he confirms the correctness of the paragraph in question, by forwarding a copy of invoices sent with stone to the church. A letter from the architect, however, explains the disagreement. Mr. Scott says,—"Owing to a difficulty, I believe only temporary, of obtaining blocks of the thickness we wanted for the tracery of the larger windows, I did sanction, to avoid delay, the use of Ancaster for four of the windows on the side less seen than the others. Since then we have reason to believe, that stone of the regular thickness will be found at Steetley; so that the tracery may, as I much wish, be of the same material with the rest of the exterior."

Bucks Architectural and Archæological Society.—The annual meetings of this society were held in Buckingham this year, and their excursions made to places of interest in that neighbourhood. The members took part in the consecration of Akely Church, three miles from Buckingham, on Tuesday before last. About 150 ladies and gentlemen partook of refreshments on the grounds of the rector, a few of whom afterwards proceeded on an excursion to Maid's Moreton Church. At eight o'clock the same evening a *conversazione* was held in the Town-hall, Buckingham, when the tables and walls of the room were covered with objects of interest belonging to the society's museum and to persons who had lent them for the occasion. The business commenced by appointing Sir Harry Verney to the chair. Sir Henry then addressed the meeting, and the Rev. W. J. Burgess read a paper entitled "Notes of Roman Interments in Britain, as introductory to the Description of the Sepulchral Remains found near Weston Turville." On Wednesday morning an excursion party visited Hillesden Church, about four miles from Buckingham, when Mr. Scott, architect, accompanied the party, and explained what of interest there exists. About four o'clock the annual meeting for the election of officers, &c. was held in the Town-hall. The meeting was not numerously, though respectably attended. Archdeacon Bickersteth occupied the chair. Mr. H. Hearn then read the second part of a paper on "The Modern History of Church Bells," written by the Rev. R. E. Batty. The first part of the paper treated of "The Ancient History of Church Bells," and it was announced that that part would be read at eight o'clock the same evening. This paper was read at Aylesbury last year, and published in the society's annual report. Captain Burgess then made sundry explanations as to the manner in which a certain sum of money had been expended in opening mounds at Hampden. They had not as yet been successful in finding any articles of interest. At Little Kemble, Bucks, some tesselated tiles had been found, and it was thought that others would also be discovered were diligent search made. A large number sat down to a *déjeuner* in the Swan and Castle Inn. The room was bedecked with leaves and flowers. At eight o'clock the adjourned public meeting was held in the Town-hall, for the purpose of reading the first part of the paper on "Church Bells."

LARCH.—How true it is that almost "everything is done by fits and starts," and that "it never rains but it pours." A few years since, when larch poles could be had in abundance at low prices, large quantities of young larch were planted every year: now, when the demand for rails and posts, created by railroads and inclosures, has made larch so scarce that it cannot be procured in sufficient quantity for farmers' purposes, and it has almost doubled in price, there is hardly any planting going on, at any rate in the midland counties. In a few years no doubt the owners of land will become awake to the fact, and then, perhaps, the large Scotch growers will be hardly able to meet the demand, and will reap a harvest in advanced prices. Few things are more important to good farming than a good supply of fencing.

J. R. PEARSON.

CONVERSION OF SEWAGE.—We learn that the Sanitary Committee of Glasgow are about to construct three or four large reservoirs on the Pinxton Burn, on a site immediately before it discharges its waters into the Kelvin, into which the now polluted waters of the Burn will be conducted, and there undergo the process of deodorising and clarification. This will be worked out by the application of Mr. Manning's process. The plan is to employ a chemical agent, which, when mixed with the sewage fluid, has the effect of precipitating all the organic matter to the bottom, and leaving the water with which it was mixed, and which it polluted, perfectly clear and colourless. The residuum is valuable as forming the basis of a manure.

STAINING-LANE, CITY.—As a constant reader I have been much pleased, from time to time, with your exposure of buildings being spoilt from the niggardliness of the owners, and have often thought, as I walk the streets of London, how a little attention on the part of the City authorities would smooth down those ugly projections and zigzags in the lines of streets; but it is unpardonable when our wealthy companies rebuild and still keep to the old landmarks, just to save a few inches of room. Witness the west front of Haberdashers'-hall, in Staining-lane, Gresham-street: there you will see a good building first project, then indent, and then project again. A COCKNEY.

COLOUR IN BRICKS.—Having read the article on Colour in the Construction of Buildings, I think if our common clamp bricks, which are so much used in London and its suburbs, were made of a richer colour than merely grey stocks, it would be better for brick merchants, and perhaps for buildings. When a building is to be compoed, it is often that very inferior bricks are used, for cheapness, of course; but on this I have no right to say anything. I am a working-man, and wish for information; and perhaps some of your many practical readers may inform me how we may get a better colour to our bricks. The only way I am aware of—and I do not think there is any other used by brickmakers—is to mix chalk with the earth, that is to say, chalk ground in water, and let run over the earth, the earth being laid two or three feet thick, or, according to the quality of the earth, sometimes thicker, if the earth is very porous, so that the liquid may go regularly through it, and sometimes stony inferior earth is washed, chalk water being mixed with it, which is to give the brick a bright yellowish tint, being performed in the burning. Now, I think there might be a better mixture than chalk—I do not suppose cheaper,—or something besides chalk, that would improve the colour, either to be mixed with the earth, or burnt at the bottom of the clamps. It may be said, you can glaze the bricks, but that is too tedious and expensive an operation: it might be done in a small yard, but could not answer generally at large; but should any of your readers know of a chemical process, I should be happy to try it.—D D.

DWELLINGS FOR THE LABOURING CLASSES.—A Bill brought from the Lords facilitates the erection of dwelling-houses for the labouring classes, by allowing any number of persons not less than six to form a company for the purpose of providing dwellings for the labouring classes, with or without private or common gardens, the company being empowered to accept grants and leases of, and to purchase lands, and to erect thereon dwellings, and to let them out to lodgers. The company must not hold at one time more than ten acres of land, except with the license of the Committee of Privy Council for Trade. The dwellings must be constructed and provided in such a manner as the General Board of Health may approve, and must be open to the inspection of its officers. If any of the company's dwellings be insufficiently drained, ventilated, or supplied with water, or be in a bad state of repair, the Board of Health may require the company to remedy the evil, and if it be not remedied within a reasonable time allowed, a penalty of 5*l*. per day will be levied as long as the default continues. The Act does not extend to Scotland.

STOCK-EXCHANGE.—Mr. J. J. Cole has been elected architect to the Stock-exchange, in the place of Mr. T. G. Allason, resigned.

WROUGHT-IRON GUN.—We understand that the first of the two gigantic pieces of artillery to be made at the Bridgwater Foundry, Patricroft, is now nearly forged, but how long the succeeding operations of turning and boring may take, and the gun be ready for shipment, is more than we can tell. The mass of iron, composed of small slabs, welded together by the four-ton steam hammer, is at present a huge lump, apparently some 8 or 10 feet long by 3 or 4 feet in diameter. Mr. Nasmyth tells us, he believes it to be the largest piece of wrought iron ever made

ACCIDENT AT WESTMINSTER-BRIDGE.—A singular and unfortunate accident occurred on Tuesday last at the Westminster-bridge works, while a diving-bell was in the act of being drawn up from the bottom of the river. The travelling-purchase, though said to be capable of sustaining sixteen tons, gave way under the weight of six tons; and the cogs being scattered across the carriage-way of the bridge, a gentleman was struck in the chest and killed while passing, and one of the workmen was also injured. The divers had just left the bell, and so narrowly escaped.

ESTABLISHMENT OF PEOPLE'S LIBRARIES IN RURAL DISTRICTS.—A public meeting was held in the riding-school at Hatfield House, Herts, on Wednesday in last week, at which Lord Stanley, M.P. who was at the time a guest of the Marquis of Salisbury, delivered a lecture in support of the establishment of a people's library for the village of Hatfield and the surrounding districts. The attendance was numerous, and included all the principal gentry of the neighbourhood, amongst whom the feeling is universally favourable to the object for which the meeting was convened. The Marquis of Salisbury presided, and Lord Stanley delivered a long and able address on the subject in hand. He recommended that a collection of some 1,500 books should be made, at an average cost of, say 4*s*. each volume, which would require a subscription of 300*l*. and this, together with cost of fitting up a room, and other incidental expenses, say in all 350*l*. or 400*l*. should be collected within a definite period, such as six months, otherwise it would not be worth while to proceed. The income should not be less than 40*l*. or one-tenth of the capital. At 4*s*. a year of subscription, 200 subscribers would be required.

TENDERS FOR ENGINE.—The enclosed tenders for St. Leonard's, Shoreditch, for a 4-horse table engine and Cornish boiler, &c. according to drawings, advertised in *Builder* of 7th July, may be usefully inserted.—P.

Fairburn, Old-street	£450
Ramsden, Kingsland-road	450
Symons, Southwark-bridge	290
Bennett, Kingsland-road	275
Dunn, Allersby, and Co. Westminster	267
Gilbert and Co. (patent engine) Hackney-road	265
Worssam, Kingsland-road	190
Gerish, East-road (accepted)	185

ART AT BIRMINGHAM.—Twenty-one pictures have been sent by local artists for competition, at the Society of Artists, Birmingham, in response to the offer of a 50*l*. prize, made at the suggestion of Sir Charles Eastlake, when he declined the prize awarded him last year. Sir Charles was to have made the award, but some other engagement has interfered with this arrangement; and he has nominated Mr. E. M. Ward, R.A. as the arbitrator of the competition.——Mr. Underwood, of Union-passage, has provided a studio and a collection of paintings, engravings, casts, and other art-works for purposes of study and reference for behoof of local art-students, artizans, &c.

SHARP PRACTICE.—I did not see the *Builder* of the 4th of August until Tuesday last, when the perusal of the denial by Mr. Wily Wesleyan ("A Town Architect"), of the facts mentioned in my former communication to you, staggered me in no small degree. I feel annoyed that I have necessarily been obliged to allow a fortnight to elapse before I could meet this audacious attempt at contradiction by any other means than the reiteration of my previous statement. But it occurred to me that I should more satisfactorily substantiate my case by an application to Mr. Wily Wesleyan's "personal friend, of twelve years'" standing. I, therefore, wrote to that gentleman, and I put two questions to him, which I transcribe with his answers:—"Mr. W. states that he had no idea of your intention to build a cemetery chapel, until you named it to him, and asked him to make a design. Is this true?—No." "He says no other architect's name was ever mentioned to him as having been applied to. Is this the fact?—No." Your readers will now probably duly appreciate Mr. Wily Wesleyan's unctuous remark that he noticed the paragraph merely "for the sake of TRUTH."

A COUNTRY ARCHITECT.

THE METROPOLIS LOCAL MANAGEMENT ACT has received the royal assent.

THE IRON TRADE appears to be reviving a little, although no alteration in prices has taken place. The steel trade is tolerably active.

PROGRESS OF TURIN.—A correspondent of the *Athenæum* writes,—Among other visible signs of the new state of things here, is a pretty little bran-new Gothic Protestant church, which has coquettishly placed itself among the trees that shade the Corso Reale, or "Rotten-row" of Turin. It might seem a small attempt at "tit for tat" to the splendid Jesuits' church in the midst of May-fair. Its locality, at all events, would seem to indicate that any proselytism which Protestantism may hope to make here, is expected rather among the hundreds than among the millions. I am told, that the neat little building in question owes its existence entirely to the Vaudois. . . . . It is impossible for the most unobserving traveller even to pass through Turin at present without being struck by the evidences of increasing material prosperity. Building is going on in every direction. In the vicinity of the railway station, which is common to the four or five lines that now connect most parts of the kingdom with each other, an entire new quarter of the city has started into existence. Large masses of building, with handsomer *façades*, alas! than can easily be met with in Belgravia or Tyburnia, stretch away in every direction. The system of making family dwellings consist of one story—or flat, as they call it at Edinburgh—instead of an entire house, permits an architect to realize a far grander result than can be accomplished when it is necessary to limit each mansion to the needs and means of one household. Almost all the new blocks of building, forming the new quarter of Turin, consist of handsome and high-priced dwellings, many of which command a rent higher than that for which a large house may be had in some parts of London.

ADVERTISEMENTS.

TO ARCHITECTS and SURVEYORS.—A Gentleman of many years' practice, and fully competent to take the entire charge of an office, is desirous of entering into an ENGAGEMENT. Expectations not extravagant.—Address, A. W. L. Office of "The Builder."

TO CIVIL ENGINEERS, LANDOWNERS, ESTATE AGENTS, AND SURVEYORS.—A SURVEYOR, who has had considerable experience in very extensive parish, railway, and mining surveys, and in taking parliamentary and contract sections, setting out, superintending, measuring and estimating every description of railway work, bridge drawing, and agency accounts, is open to an ENGAGEMENT, or will be glad to enter into partnership with an Estate Agent and Surveyor, who requires energetic assistance. Testimonials and references satisfactory. Address, A. B care of Mr. SHERWOOD, Solicitor, Anderby Villa, Leamington.

TO CARPENTERS' AND JOINERS' FOREMEN.—WANTED, a steady, experienced Man (a few miles from town).—Address, stating reference, wages, &c. to S. T. Office of "The Builder."

TO FOREMEN.—WANTED, a Person to Superintend a Building a few miles from town.—Address, stating reference, wages, &c. to S. W. Office of "The Builder."

WANTED, a Person who can be well recommended to take the MANAGEMENT of a RETAIL TIMBER-YARD in London. He must be thoroughly conversant with his duties from actual experience, and his capabilities, activity, and integrity, must bear the strictest scrutiny.—All answers to this advertisement must state particulars of the writer's former employment, his age, the salary expected, &c. and be addressed, pre-paid, to A. Z. care of Mr. Gooch, 85, King William-street.

WANTED, immediately, a competent Person to take the entire management of some extensive SEWER WORKS.—Apply to WILLIAM BAKER, Builder, Bristol.

TO SMITHS.—WANTED, a respectable middle-aged Man, in an IRONMONGERY establishment. He must be a good workman, and thoroughly acquainted with stove, range, and hot water work. Constant employment, and liberal wages. Reference required.—Apply to H. C at Mr. Harvey's, 95, Hatton-garden.

WAGES 2*l.* per week.—To POTTERS.—WANTED, a steady, respectable, MARRIED MAN, who thoroughly understands the burning and turning of saucepipes, spirit bottles, &c. and preparing the clay. No person need apply who cannot be well recommended, and who is not fully competent to undertake the business. Address, H. CANNING, Pillow Pottery, West Willow, Romsey, Hampshire.

WANTED, in an Engineer's Office, in London, a DRAUGHTSMAN, accustomed to making working drawings.—Apply, by letter only, stating age, former employment, and wages expected, to Messrs. SIMPSON and CO. Pimlico Works, Belgrave-road, Pimlico.

TO CARVERS.—WANTED, for two months, a GOTHIC CARVER, accustomed to freestone work. He must give reference to previous employers.—Application to be made by letter, stating terms, to Mr. THOMAS PARISH, Tiverton, Devon.

WANTED, by a highly-respectable Man, a SITUATION as CLERK of WORKS, or GENERAL FOREMAN. Has a thorough practical knowledge of the whole building business. Can produce good references from Architects and Surveyors.—Address, S. W. Flora-cottage, Middle-road, Brixton.

TO PLUMBERS, BUILDERS, &c.—WANTED, by an experienced PLUMBER, a SITUATION; has no objection to fill up his time at fitting. Satisfactory reference can be given.—Apply to B. M. 7, BARNES, Stationer, &c. Park-street, Baker-street, New-road.

WANTED, by an experienced Person, a RE-ENGAGEMENT as FOREMAN of PLASTERERS. Address to G. H. Office of "The Builder."

TO PLUMBERS AND BUILDERS.—WANTED, a SITUATION, by an experienced Plumber and Lead Glazier. Can turn his hand to any part of the business. Good references.—Direct, A. B. C 7 Vernon-mews, Portobello-lane, Notting-hill, Bayswater.

TO BUILDERS, CONTRACTORS, &c.—WANTED, a SITUATION, in the Office, by a Young Man (who has served his time to the trade), with a general knowledge of estimating, taking out quantities, bookkeeping, &c. needs. Good references.—Address, W. S. 36, Mount-street, Lambeth.

TO ARCHITECTS AND SURVEYORS.—WANTED, a SITUATION in town or country, by a young Man, aged 20, in an Office, who has been four years in the profession.—Address, C. G. M. Great Marlborough-street, Thomas's, Regent-street.

TO PLUMBERS, PAINTERS, BUILDERS, &c.—WANTED, by a young Man, aged 26 years, a PERMANENT SITUATION, at standing wages of 4*s.* per day, as Painter, Grainer, or Paperhanger, and is very handy at Plumbing. Good reference can be given.—Address to R. S. G. 8, Prince's-street, Whitechapel.

TO IRONFOUNDERS, SMITHS, AND ENGINEERS.—WANTED, a Situation as MANAGER or FOREMAN, in either or both branches, by a person thoroughly competent, having had upwards of sixteen years' experience. Can make working and finished drawings, estimates, &c. &c. No objection to the country. Unexceptionable references, if required.—Address, J. F. No. 93, Regent-street, Westminster.

DRAINAGE WORK.—WANTED, a SITUATION, as INSPECTOR or FOREMAN over Public or Private Drainage Works by a person who is about completing the Drainage to a Large Town in the West of England. Highly respectable references as to ability and character can be given.—Address, J. E. N. Office of "The Builder."

TO SURVEYORS AND LAND AGENTS.—WANTED, by a Young Man, who has served his articles with a surveyor, and is generally acquainted with the routine of such business, an ENGAGEMENT in either of the above departments. Respectable references given.—Address, Y. Y. 1, Post office, Knowle, Birmingham.

TO BUILDERS, CONTRACTORS &c.—WANTED, an ENGAGEMENT as CLERK, by a gentleman practically acquainted with and competent to the discharge of any counting-house duties, and who is also disposed to make himself generally useful to his employer, at a moderate salary.—Address, P. Q. Office of "The Builder."

TO BUILDERS AND OTHERS.—WANTS a SITUATION, a competent FOREMAN, for either shop or works, who understands the routine of town and country business. Makes working drawings, measures timber, carpenters in detail, has a thorough knowledge of all branches of carpenters' and joiners' work, and the direction of building in general. Would contract for staircasing or other work. Satisfactory reference given.—Address, M. L. 1, Staple's-inn-buildings, Holborn, London.

TO THE BUILDING TRADES.—WANTED, an ENGAGEMENT, by an ACCOUNTANT and BOOKKEEPER, experienced in getting up accounts of the various departments, and prizing to great advantage for charge, or in prime cost. No objection to the country or temporary service.—Address, A. Z. Mr. Woodman's, Butcher, Lark Hall-lane Clapham, Surrey.

TO BUILDERS AND PLUMBERS.—THE Advertiser, who is an experienced Plumber in all its branches, wishes for CONSTANT EMPLOYMENT. Would have no objection to fill up his time at glazing, &c. No objection to the country.—Direct to G. F. Office of "The Builder."

TO BUILDERS, MANUFACTURERS, AND OTHERS.—THE Parents of a respectable, well-educated youth wish to place him where he would acquire a practical knowledge of the business.—Address, J. T. Mr Turner's, "Cock" Inn, Clapham, Surrey.

TO BUILDERS AND CONTRACTORS.—THE Advertiser is open to SUPERINTEND, or take the Stone Work of any job, at a very low rate, to the entire satisfaction of the Clerk of Works and Builder. First-rate reference can be given.—Address, A. B. Z. care of Mr. West, Tobacconist, 8, St. Peter-street, Islington.

TO MASONS AND CARPENTERS.—THE Advertiser, a Young Man, 18 years of age, is desirous of binding himself for three or four years, to learn either of the above businesses. Has quick, businesslike habits, and is able and willing to make himself generally useful.—Address, W. C. 30, Wilton-terrace, Wilton-road, Pimlico.

TO HOUSE PROPRIETORS AND OTHERS.—THE Advertiser is fully competent to undertake the MANAGEMENT of REPAIRS in all its branches having filled a situation for several years in one office.—Address A. Z. 22, Henrietta-street, Brunswick-square.

TO ARCHITECTS.—THE Advertiser is desirous of an ENGAGEMENT as IMPROVING CLERK, in an Architect's Office. He has been some time in the profession, and is a good draughtsman, and understands perspective.—Address, "PHILO," Mr. C. Barker, 12, Birchin-lane, City.

TO ARCHITECTS.—EVENING EMPLOYMENT WANTED, by a Youth engaged in an architect's office during the day, who could assist in drawing, tracing, writing, squaring dimensions &c.—Address, A. B. Post-office, Gray's-inn-road.

TO ARCHITECTS.—A GOOD and EXPEDITIOUS DRAUGHTSMAN, who is perfectly capable of getting up working and finished drawings, perspectives, &c. is a good colourist, and understands the routine of an office, is desirous of meeting with an ENGAGEMENT.—Terms moderate.—Address, F. S 10, Granby-street, Hampstead-road.

TO BUILDERS AND HOUSE DECORATORS.—A YOUNG MAN wishes to obtain a SITUATION as GRAINER, WRITER and PAINTER, and if required, will undertake glass embossing, gilding, &c.—Apply by letter only, to A. Z. 85, Brunswick-street, Hackney-road, London.

TO BUILDERS, &c.—A RESPECTABLE, persevering YOUNG MAN, aged 29, of great business habits, a thorough Carpenter and Joiner, is desirous of ENTERING the EMPLOYMENT of a well-established Builder, to whom he now offers his services for the lowest possible consideration, his object being to acquire a more perfect knowledge of building generally. He can make plans and working drawings, measure artificers' work, take out quantities, &c. and can give most satisfactory references of abilities and character.—Address to H. B. care of C. Key, 30, Bridge-place, Harrow-road.

AN ARCHITECTURAL ASSISTANT, who is well acquainted with Gothic, a good draughtsman, understands perspective, and the usual duties of an office, wishes for an ENGAGEMENT.—Address, R. C. 105, East-street, Manchester-square, London.

A YOUNG MAN, aged 22, desires a RE-ENGAGEMENT. He is a fair architectural draughtsman, a good accountant; can map, plan, and take out quantities, and is thoroughly acquainted with bookkeeping and the principles of levelling and surveying. Salary, if in improvement being the object.—Address, X. Y. Mr. Low's, Law Stationer, Belle-yard, Temple-bar.

TO ARCHITECTS AND SURVEYORS.—A GENTLEMAN of several years' experience, is desirous of an ENGAGEMENT, either with or without a prospect of a Partnership.—Address, H. A. C. Grove-lane, Camberwell, Surrey.

TO BUILDERS.—A YOUNG MAN wishes for a SITUATION in the Office. Has a general knowledge of the business.—Served his time at the bench. Address, X. Y. Mr. Hubert's, Palace New road, Lambeth.

TO ARCHITECTS AND SURVEYORS.—A NEAT and expeditious DRAUGHTSMAN is desirous of a SITUATION in either of the above offices. He is been accustomed to prepare fair, working, detail, and other drawings, measuring up works, &c.—Address, S. S. S. 5, Richmond Villa, Richmond-road, Bayswater.

TO MASTER BUILDERS AND PAINTERS.—A FIRST-RATE Workman wants twelve months' EMPLOY as GRAINER, WRITER, and GILDER. A little plain work not objected to. The country preferred.—Address, G. H. 8, Clarence-gardens, Regent's-park.

AN Architect's Assistant, who is also an artist, has fifteen years' experience in the profession, a thorough knowledge of details and construction, of perspective and competition drawings, is desirous of a PERMANENT ENGAGEMENT.—Address, A. Architect, Office of "The Builder."

A COMPETENT ASSISTANT wishes for an ENGAGEMENT. Terms moderate.—Apply to X. Y. Z. Mr. Arnold's, No. 9, East-terrace, Gravesend.

TO ARCHITECTS.—A GENTLEMAN accustomed to Ecclesiastical Work is desirous of a permanent ENGAGEMENT.—Address, L. M. N. Office of "The Builder."

PARTNERSHIP, or Otherwise.—The Advertiser wishes to meet with a Young Man of active and enterprising disposition, and who is also thoroughly conversant with the minutes of building operations, to join with and assist him in establishing a good country business.

N. B. Good connections preferable to capital.—Address, A. W. 1, Park place, Paddington green.

ROYAL POLYTECHNIC.—Lecture on the New Metal, Aluminium, by J. H. Pepper, esq. daily, at 3 and 8. The largest bar yet produced, presented by the Emperor of France, on view.—Musical Entertainment, by G. Buckland, esq. Monday, Wednesday, and Friday, at 7.—Transmission of Sound through Solid Conductors, with Musical Illustrations, by the Orpheus Glee Union, Monday, at 3, and Wednesday and Friday at 3 and 8.—Adulterations of Food, by Dr. Brown, F.L.S. &c.—Tuesday, Thursday, and Saturday, at 1.—Thames Water, in the Microscope, daily, at 4 and 7.—Russian Infernal Machines, at 3 45 and 8 45.—Relics of the Franklin Expedition, and Arctic Collection of J. Barrow, esq.—Dissolving Views of the Crimean Battles.—Diorama of San Sluck.

TERRA-COTTA WORKS, Blackfriars-road London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition, and will be found to be a different material to that now being imitated by puffers and manœuvrers, with only three or four years' experience, and without practical knowledge. Some of the works recently completed by M. H. B. can be referred to the whole of the embellishments to the external part of Cliveden House, his grace the Duke of Sutherland's; also Tottenham and Kingsland Churches, the turrets to the Camden-road Chapel, containing from 4,000 to 4,500 feet cube of material, and 60 feet high, at the County Fire Offices, Cornhill and Lombard-street, the Arms, with the allegorical group, at the Kent Mutual Insurance, Queen street; and other works elsewhere, too numerous to mention. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

METALLIC PROTOXIDE PAINT.—This Paint has been in extensive use and severely tested on the Great Western, North and South Western, Midland, York and North Midland, and other railways; the new Houses of Parliament, British Museum, East India House, and West India Docks, &c. The Protoxide Paint unites most intimately with iron, preventing oxidation, and rendering it equal to galvanized. It is of great value when applied to iron vessels, roofs, steam and water pipes, and their joints, and for coating the inside of sugar moulds. It is not affected by foul air or gas of any kind, and well adapted to houses, hospitals, &c. can be painted during occupancy, without the least risk to the health of the inmates. It preserves wood from decay, and will be found effectual in preventing discolouration on stuccoed buildings, and keeping out all damp. Sold by D. and G. BRYMNER, Agents for Scotland.

Greenock, August 1st, 1855.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of body, purity, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely luxurious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; FREDERICK BRADY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool, by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

PLATE GLASS AT GREATLY REDUCED PRICES.

THE UNION PLATE GLASS COMPANY,

RESPECTFULLY INFORM THE TRADE, THAT IN ORDER TO MEET THE PRESENT DEPRESSION, THEY HAVE MADE A VERY CONSIDERABLE

REDUCTION IN THE PRICES OF POLISHED PLATE GLASS

FOR GLAZING PURPOSES.

Lists of Prices may be obtained at the places named in another advertisement in this publication.

THE WORKS—POCKET-NOOK, ST. HELEN'S—JULY 2, 1855.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

ANCIENT HOUSE FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or restored in the MEDIÆVAL STYLES, Messrs. CRACE have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.

STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Bauderkin.
CARPETS, plain or in rich Velvet pile, with appropriate Borders.
PAPER HANGINGS of various kinds.
OAK CABINETS, Buffets, Octagon Library and Occasional Tables, Benches, Chairs, and other useful and appropriate Furniture
The whole of the above-mentioned Furniture, &c. is designed by the late Mr. A. W. PUGIN, Architect.
To render this Furniture generally available, a considerable portion has been arranged in the simplest manner, consistent with it ancient character.

14, Wigmore-street, January, 1853

PLATE-GLASS for GLAZING PURPOSES.

H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B ditto ditto.
	B B B B ditto ditto.

M medium.

Sold by all the principal Stationers in town or country.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

This Paint possesses in an eminent degree the following advantages over all other known Pigments:—
INDESTRUCTIBILITY BY HEAT—PRESERVATION OF IRON FROM OXIDATION, WOOD FROM DECAY, AND MASONRY AND BRICKWORK FROM DAMPNESS—PERMANENCE OF COLOUR AND FREEDOM FROM DELETERIOUS PROPERTIES—SUPERIORITY OF BODY.

The Protoxide Paint, as at present produced, is of one shade of colour, viz.:—a pale drab, but it may be tinted with any other colour to suit the taste and purpose for which it may be required. It is not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind, and is therefore well adapted for the interior of Ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.—Sole authorized Agents for England:—
MESSRS. C. GRABHAM AND CO. 4, BARGE-YARD, BUCKLERSBURY, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size. Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extreme of heat or cold. The material of which is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 28th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Plastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED the Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington. 6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; can be used with less than ordinary hydraulic proportions, stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by C. REEVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Accounts of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with special reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise. London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no coloring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Stone Lime, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Plastic, Hair, Lias Lime, Laths, Slates, and Slate Slats, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Rubbing Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by J. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly impervious to wet, and when moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above. 11, George-yard, Lombard street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent. ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also BRICK and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

SOUTHAM BLUE LIAS LIME and PORTLAND CEMENT WORKS.—OLDHAM and TATHAM are now prepared to receive orders from contractors, builders, and merchants for Ground and Lump Blue Lias Lime, also for Portland Cement and Lias and Bath Cement, both of which will be found of very superior quality, and will be improved by the addition of two or more parts of sand to one of cement. 10, and T.'s boats can run alongside any wharf or works, and all orders addressed to Warwick will receive prompt attention.—Office, Warwick.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

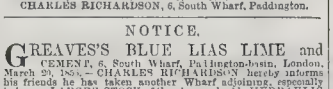
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.



CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or al ngside rivers, canals, or railway stations, should be given a few days before required.

BLUE LIAS LIME.—J. EASTWOOD and SONS take this opportunity of informing their customers that they have now BLUE LIAS LIME always in stock, ready for delivery, at Belvidere-road, Lambeth.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON ABSORBENT impervious to rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers (office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 69, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agent, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street, North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "Records of the Tenax," page 1, of the first Exhibition, rank the Manufactories known so long as "The Talents," Lunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wilnecote, Cauldon-place, begs to offer pantiles at 50s. per 1,000; floor bricks and 6 inch pavings, at 40s. per 1,000; 8-inch pavings, at 60s. per 1,000; 9 inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

DUTCH CLINKERS, 32s. per thousand, Hollow Bats.

WELSH, STOURBRIDGE, AND NEWCASTLE FIRE-BRICKS, LUMPS, AND TILES, at much less than cost prices; well-established PRIVATE PRACTICE. THE BUSINESS to be DISPOSED OF, with the valuable connection, and a portion of the PREMISES to carry it on at once. TO BE LET, at almost a nominal rent.—For particulars inquire on the premises, Hon-duras Wharf, Burns-st, South-wark, London.

BRICKS.—Excellent hard-burnt RED BRICKS, of deep colour and perfect shape, 28s. per 1,000, cash, delivered into the railway trucks or carts. Stocks, malms, seconds, place, &c. at low prices; cutters, footings, arch, and other fancy bricks to order. Agricultural draining tiles. Address, Mr LEVETT, at the Railway Brick and Tile Works, Brentwood, Essex, where a large stock may be inspected.

N.B.—The Works adjoin the Goods Station of the Eastern Counties Railway, at Brentwood.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, pavors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and flare, bricks, tile-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and Co. Gray's, Essex, executed with despatch.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 25s. per thousand; Grizzles, 30s. per thousand; Rough Stocks, 20s.; Place, 18s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Countinghouse, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS.

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE, 8, ADELAIDE-PLACE, London-bridge.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all descriptions, and of best quality. Wood and SON, Manufacturers, Dudley, Oldbury, near Birmingham. Agent.—Mr. J. UNWIN, Private Residence, 59, Nelson-square, Blackfriars-road.

BRICKS.—Builders wanting Bricks of good quality, are solicited to call on PARKS', Lewisham, and see the quality at low prices. Carriage within six miles on the most reasonable terms. Red facing bricks at 40s. All kinds of tiles, malm bricks for building, and glazed stable pipe manufactured; also all kinds of red pipes and pots.—Application by letter punctually attended to.

FOR IMMEDIATE SALE.—FIRE BRICKS, LUMPS, TILE, and TERRA COTTA.—SAMUEL THICKETT has received a large consignment of the above goods for sale.—Apply on the premises, Stone-wharf, Isle of Dogs. Dealers and large consumers liberally dealt with.

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, at very low prices, a large quantity of very hard BRICKS, PAVIORS', and PAVING WARE; also, 3, 4, 5, 6, and 12 inch red Socket Drain Pipes, in 2 feet lengths. Apply to St. JOHN HEWITT, Redhill Works, Southampton.

TO BRICKMAKERS, BUILDERS, and OTHERS.—TO BE SOLD, a substantially-made and nearly new WASH-MILL, with chain pan and sweep complete. Cost within the last nine months 70l. in its erection, and to be now sold for less than one third its cost.—May be seen by applying to Mr. HAYWARD, at the White Hart, High-road, Tottenham.

CLAY ARCHITECTURE.—To NOBLEMEN, ARCHITECTS, BUILDERS, and OTHERS.—A PATENT has been taken out by JOSEPH ARNOLD, Tamworth, Staffordshire, for a new and improved method of making ORNAMENTAL BRICKS, of any pattern whatever, on a raised ground, and the same accuracy as a seal upon wax.—By this novel invention the pattern is made with the brick, the clay is prepared by steam power, which produces, when burnt, an impershable article, ornamental window heads and sills, large bricks for panels, and facings chamfered, common size bricks, cramp and vine, Elizabethan, or any other pattern. The patentee can make them blue, red, or strawberry colour. His large paving bricks, 9½ inches square, are inscribed with a screwed line, to prevent slipping, and carry off the rains, only require being seen to supersede the flagging now in use, being imperishable. For the alterations of large public buildings, likely to be frequent offices, bricks are made by 5, inches, and cut to, weighing nearly 5 lbs., of the superior material. The time does not admit the extension of our public and private buildings equal, if not exceed the antient, unless the art in the hands of architects, as there is a limit to design. Specimens of these bricks may be seen by the Inventor's Gallery, Crystal Palace, Sydenham; or at his Metal of Earth Works, on the Watling-street-road, Wilnecote, within three minutes' walk of Wilnecott Station, on the Midland Railway, and two miles from Tamworth Station, Trent Valley line. Church-street, Tamworth, August 8, 1855.

O. MCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Pipe sand delivered per barge, in any quantity, almost at the Thames.

ASPHALTE PAVEMENT, 2s. 3d. per square yard, 2½ inches thick, for footpaths, railway platforms, school yards, garden paths, &c. Carriage from 6 to 8s. per square yard. Railway or pleasure walks, 2s. per square yard. Every description of pavement laid down, and the work guaranteed. Apply to Messrs. WRIGHT and BROWN, 32, Bucklersbury, City.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphaltefor Railway Arches, 45s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Harbor Wharf, Rotherhithe.

G. H. CLARK, Agent.

FOWLER'S
IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 11. 15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast iron, copper and brass, for hot or cold liquors &c. &c. Long barrel and hydraulic lift pumps, with handles on planks; and engines of various powers, for wells of any depth.

ON SALE SINGLE PUMPS, BARRELS AT SHORTEST FOR HAND STEAM

AND HIRE, AND DOUBLE 3 in. to 15 in. to any depth, NOTICE, OR POWER.

FOWLER'S
PORTABLE PUMPS,
3-inch to 9-inch Barrels, Plain or Sliding Telescope Suction.
Wrought-iron Pails, Galvanized or Painted.
Pulley Blocks of every description.

BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

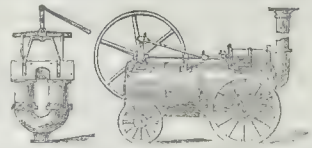
PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B The above can be worked either by hand, horse, or engine power.

Iron Pails 38s per doz. painted.
Ditto .. .. 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.



WARNER'S PATENT VIBRATING STANDARD PUMPS. PATENT CAST IRON PUMPS, for the use of farms, cottages, manure-tanks, and wells of a depth not exceeding 26 feet.

Diameter of Barrel.	Length of Barrel, under nose.	£ s. d.
2½ in. short	1 ft. 7 in.	Fitted for lead, 1 19 0
2½ „ long	3 3	gutta percha 1 15 0
3 „ ditto	3 6	or cast iron 2 19 0
3½ „ ditto	3 6	flanged pipe, 3 18 0
4 „ ditto	3 6	as required. 4 3 0
5 „ short, with 15 feet of lead pipe attached, ready for fixing		2 19 0
5½ in. long ditto ditto		3 15 0

The short-barrel Pump is very convenient for fixing in situations of limited head room or space, for the supply of coppers and sinks in washhouses, and water from underground tanks or in hot forcing and plant houses; they may be fixed, when desired, under the stage. May be obtained of any Ironmonger or Plumber in town or country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin street, London.—Every description of Machinery for Raising Water, by means of wheels, rams, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c. Engravings sent on application.

TO CONTRACTORS.

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 3 horse, 10 horse, 12 horse, 16 horse, 25 horse, and 40 horse power, adapted for contract work generally. These engines are new, specially employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work. Apply to Messrs. MEDWIN, HALL, and CO. Engineers, 92, Blackfriars road, Sole Patentees and only Manufacturers. N.B Any of these Engines may be purchased.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which the parts liable to manufacture Bells of any size, note, or weight, of unexceptionable truth in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

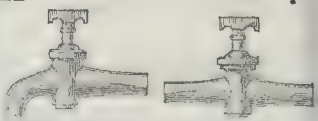
TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and hung on a new system, which gives a superior tone and facility for ringing.

TO WATER AND DOCK COMPANIES, CONTRACTORS, &c.

PARSEY'S PATENT REVOLVING PUMP will throw as much water with one-third the labour as any other pump. One of these pumps at work at No. 7, Strand.



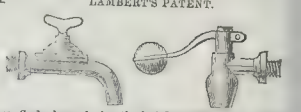
To LOCAL BOARDS of HEALTH and GAS and WATER COMPANIES.—FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 7a, Strand, London.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 20,000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



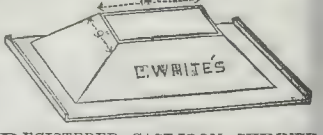
The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin street, London.

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.



These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 15 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valves are simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self acting, and other closets, upon economic arrangements, suitable for public buildings, villages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building. Price from 6s. 6d. each, according to size.

IRON GIRDERS and COLUMNS to MODEL or DRAWING.

IRON PIPES and connections for gas, water, and liquid manure.

RAIN WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O-G Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of builders' castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

LOOKER'S PATENT TUBULAR VENTILATOR is the CHEAPEST and most ORNAMENTAL yet introduced for effectually admitting pure air without a perceptible draught. Decorated to suit any building or apartment. Particulars and prices may be obtained, and specimens seen, at the Office of Mr. J. PATMAN, Architect, 4, Serjeant's-inn, London; or on application to BENJAMIN LOOKER, the Patentee, Kingston-on-Thames.

SMOKE! SMOKE! SMOKE!—The only cure for smoky chimneys is MARK BERRY'S IMPROVED VENTILATOR: price, for 10-inch pot, 7s. 6d; 11-inch, 8s. 6d.; 12-inch, 9s. 6d.; at MARK BERRY'S Wholesale and Retail Zinc and Galvanized Iron Works, Whitechapel Church-yard, London.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 106, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 116, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

Builders' and Painters' Ladders, Trestles, Steps, &c.—A price-list sent on application to 3, Tottenham-court.
Waggons, Carts, &c. on the shortest notice.

SALES BY AUCTION.

IN SURREY.—The Westbrook Place Estate, close to the town of Godalming, the intended Station of the Portsmouth Railway being on the Estate. A Manorial Property, with capital Residence, Farm Buildings, and Eight Acres of ornamental Building Land. Also, the extensive Mill Premises, with double water power, and about Eighteen Acres of Land, and some smaller pieces of Land—almost Four Acres.

MR. ROBINS is favoured with instructions to submit to PUBLIC COMPETITION, at the AUCTION MART, on THURSDAY next, AUGUST 23rd, at TWELVE for ONE, in three lots, a singularly important Freehold Manorial Property, of which early possession may be had, including known as the WESTBROOK PLACE ESTATE, on the west side of the town of Godalming, famed for the irregularity and beauty of its position, which presents, perhaps, the only site in all England offering the same irresistible temptation for carrying out a building operation for villas, with the advantage of immediate proximity to the Station about to be erected on the Portsmouth Railway, ranging the property almost within an hour of London; whilst stone of excellent quality is almost any extent ready to obtain from the quarry. The estate comprises a capital and spacious residence for a family, seated on a terrace walk, with sufficient accommodation for an extensive establishment; it has recently been carefully repaired, improved, and decorated, at an immense outlay; the numerous chambers being of excellent proportions, admirably arranged, appropriate offices, six-stall stable, and treble carriage house. The pleasure grounds and walks, commanding from various points the most lovely and diversified scenery, are of unusual extent, ornamented by luxuriant shrubs, stately timber, and hanging woods, giving a park-like character to the eighty acres of rich and productive land which form lot 1, and, with the newly-built and well-arranged Farm-house, Barns, and Bailiff's abode, would suggest the formation of a beautiful model farm. The approach from the town will be much improved by widening the present path from the church; a level crossing of the line and a bridge are being constructed for the estate. Also, on the opposite side of the river Wey, are the important freehold premises occupied by Mr. Baldey as a Fulling and Weaving Mill, very extensive and well arranged for the purpose, with ample water power; also a second water power, formerly appertaining to a paper mill, which may again be brought into use. This lot comprises altogether about eighteen acres of luxuriant land, a portion being lammas land, with a noble sheet of water, which receives the flushing water from the mill, and might be made a capital preserve for fish. There are also some outlying pieces of meadow land, about four acres, forming lot 3. Cards to view the estate may be had on application to JAMES HASSELL, the Bailiff, at Westbrook Place; and particulars and plans had of him twenty-eight days prior; also at the King's Arms, Godalming; of Mr. Osmond, Surveyor, Farnham; of Mr. KEY, Surveyor, Godalming, and 8, Canton-row, Westminster; of W. G. HOY, Esq. Solicitor, 38, Great George-street, Westminster; at the Auction Mart; and at Mr. ROBINS's Offices, Piazza, Covent-garden.

TWICKENHAM.—To Builders and Persons wishing to build for their own occupation or as an investment.—Valuable Land, with extensive frontage, and Two Ground Rents, amounting to 70l. per annum.—Bi

MR. MASON, at GARRAWAY'S, on TUESDAY, SEPTEMBER 4th, FIFTY PLOTS of FREEHOLD BUILDING GROUND, delightfully situate, near the new church, Twickenham, a short distance from Pope's Villa; 40 acres are opposite Orleans House, finely adjoining St Mary Clay's Park; 24 acres are between the upper and lower roads; gravelly soil and good water; eligible for villa residences, with a railroad station but a mile distant. Also a well-let Ground rent of 16l. issuing from two houses already built on part of the estate, annual value, 70l.; and another ground rent of 22l. from a piece with 56 feet frontage, let on lease for 80 years at 6l. 6s. per annum, worth 80l. a year. May be viewed on application to Mr. PYDDAY, at the Prince Albert. Particulars had of the Auctioneer, No. 10, Fulgate

MARBLE.—TO BUILDERS, SCULPTORS, MARBLE MASONS, &c.

MESSRS. THOMPSON and HOLMES beg to inform the Trade that their PUBLIC AUCTIONS of MARBLE will take place on the following days:

MONDAY, 3rd SEPT., 1855 | MONDAY, 1st OCT. 1855.
MONDAY, 5th NOV. 1855.

Catalogues and further particulars to be had on application one week previous to each sale. The MARBLE WHARF, Thames Bank, Pimlico, at the foot of VAUXHALL-BRIDGE.

TO ROPE AND TWINE MAKERS, BUILDERS, AND OTHERS.—Valuable Leasehold Property and Residence, with immediate possession, or for Building Purposes

MR. ELLIS is directed by the Administratrix of the late Mr. J. M. Paterson to SELL by AUCTION, at GARRAWAY'S, Cornhill, on THURSDAY, 30th of AUGUST, at TWELVE, the valuable PREMISES, having a depth of about ninety yards, with Dwelling-house, Shop, Stable, and Building, being in the Parish of Rainham, but one mile and a half from the City, with excellent Residence and Gardens thereto belonging, and recently occupied by the deceased as a rope and twine ground; and, at the same time, by the attention of parties desirous of building for investment, the site being a good one for the purpose, with upwards of 100 feet of road frontage, held for an unexpired term of fifty-one years, at a ground-rent of 8l. 10s. per annum. May be viewed until the sale. Particulars, with conditions, obtained of Messrs. ROBINS, Esqs., Solicitors, Finsbury-circus; at Garraway's; on the Premises; and of the Auctioneer, 150, Minories, City, where a plan of the property can be seen.

TO BUILDERS AND BRICKMAKERS.—Valuable Manufacturing Plant, Stock, and Leasehold Property, for Sale, in a first-rate Brickyard, Leigh, North Malvern, Worcestershire, in the vicinity of the rapidly improving town of Great Malvern, and at the nearest route of the projected Worcester and Hereford Railway, to be SOLD by AUCTION, by

J. MATTHEWS, on WEDNESDAY, AUGUST 29, 1855, at the BRICKYARD, Leigh, North Malvern, Worcestershire, ONE HUNDRED THOUSAND BUILDER'S BRICKS, 20,000 WIRE and COPING BRICKS, FLOOR SQUARES, GRESS and other TILES, DRAINING-TILES and PIPES, and to two Powerful Steam Engines, for sale to commence at ELEVEN o'clock. And in the evening of the same day, at the BELVOIR HOTEL, North Malvern, subject to conditions to be then produced, the Freehold Messuage, MANUFACTORY, BRICK-FLOORS, TILE, and DRAINING-PIPE PLANT, comprising a five-horse power steam engine, rolling and pug mills, two Patent Machines for the making of bricks, tiles, and pipes, a recently-erected two-kiln brick-and-tile shed, barrows, planks, and all requisite appliances, a comfortable cottage residence, large shed for the reception of moulds, and the leasehold interest, of a desirable brickyard, held for fourteen years of which are unexpired. The sale will be held in the course of May, should not the property be disposed of by private contract previously, of which due notice will be given. The Premises have a frontage to the road of 100 feet, and its Cottage Residence has a large garden in front, and is in every respect replete with comforts and conveniences, and is not without some pretensions. Sale to commence at SIX o'clock. Further particulars may be obtained of Messrs. GELL and HOPKINS, Solicitors; Mr. GEORGE GARLAND, Solicitor; or the Auctioneer, all of Worcester.

TO BUILDERS, CONTRACTORS, and OTHERS.—St George's Workhouse, Fulham-road, Little Chelsea.

MR. C. LOUIS KELLY (of the firm of Bennett and Kelly, Builders' Auctioneers, Lowndes's Estate Agents have been favoured with instructions from the Right Hon. and Rev. the Governors and Directors of the Poor of the parish of St. George, Hanover-square, to SELL by AUCTION, on the PREMISES as above, on TUESDAY, the 21st AUGUST, at TWELVE for ONE o'clock, in sundry lots, all the excellent BUILDING MATERIALS, forming part of the Workhouse, and the next week, forming the property and residence of the Earl of Shaftesbury, and comprising upwards of 100 rods of sound stock brickwork, a large quantity of slates and tiles, some capital York and Portland stone copings, steps, and paving; a large assortment of sound well-seasoned timber and boarding, including principals, joists, rafters, floor-boards, extra stout panelling, doors and door linings, oak staircases, &c. &c.; also a large quantity of cast-iron and wrought-iron sash frames, together with all the cast-lead and zinc gutters, pipes, and copper boilers, with brass taps, &c., stoves and ranges, and a large gas lamp and fittings. On view three days prior to the sale, and catalogues had upon application to H. Wilcocks, Esq., Architect and Surveyor, 1, Sussex-place, South Lambeth, at the Entrance Lodge, and at the Offices of the Auctioneers, Lower Belgrave-place, Pimlico.

SALES BY AUCTION.

PEREMPTORY SALE.—The Royal Albert Tavern, near North Woolwich; a Carcase and a Plot of Building Ground, all Freehold

MR. MOXON will SELL by AUCTION, at the MART, on THURSDAY, AUGUST 30th, by direction of the Mortgagee; the above desirable FREEHOLD PROPERTY, situate on the North Woolwich road, about five minutes' walk from the railway station, a locality rapidly increasing in population, and from its contiguity to several large factories, the Victoria Docks, and other public works, daily improving in value.—Particulars at the Mart; of E. DOLMAN, Esq. Solicitor, 39, Jermyn-street; and of the Auctioneer, 3, St. Martin's-place, Trafalgar-square (removed from West Strand).

TO SCULPTORS, MARBLE MASONS, BUILDERS, AND OTHERS.

MESSRS. EVERSFIELD and HORNE beg to announce that they have received instructions from the Consignees to SELL by AUCTION, on the PREMISES, 17, Millbank-street, Westminster on TUESDAY, 28th AUGUST, at ELEVEN, Several parcels of MARBLE, comprising statuary and Sienitic, Sicilian, Devonshire, and coloured marbles, of fine quality and sizes. May be viewed, and catalogues had on the Premises; and of the Auctioneers, 40, Parliament-street, or Coal Exchange. Approved bills at six months taken in payment.

CAMDEN-TOWN CEMETERY.—BUILDING ESTATE.—TO BE LET, on Building Leases for 99 years, very eligible SITES upon the above estate, having good frontages into Pancras-road, Pratt-street, and Bayham-street. There is a great demand for houses and shops of the third rate in this locality, which is enhanced by its near proximity to the North-Western and L. N. W. London railway stations, and the Hampstead road. Plans may be seen, and particulars obtained by application to H. E. KENDALL, Esq. Architect, 17, Suffolk-street, Pall-mall East; or to JOHN DANGERFIELD, Esq. Solicitor, 20, Craven-street, Charing-cross.

LOWER THAMES-STREET.—TO BE LET, by Tender by the Worshipful Company of Armourers and Brasiers, on a Lease for Twenty-one years from Midsummer next, the extensive Premises known as the GLOBE-YARD WAREHOUSES, situate in the above street, nearly opposite the Custom-house. The lessee will be required to pay all taxes and rates, including sewers and militia rates, and all assessments for sanitary purposes, and the expense of fire insurance, the land-tax being excepted; and the lease will contain all covenants usual in the Company's leases. Sealed Tenders to be delivered at Armourers' Hall, Coleman-street, on or before the 3rd of OCTOBER next, where parties making the same are required to attend the following day, at HALF PAST TWO o'clock. The Company do not bind themselves to accept the highest or any other Tender.
JOHN PONTIFEX, Clerk.
5, St. Andrew's-court, Holborn.

BUILDING-GROUND in the CITY.—TO BE LET on lease, FRONTAGES 60 feet 6 in. by average depth, 49 feet; 88 feet by average depth 100 feet.—For further particulars, apply to THOMAS SMITH, Esq. Architect, 14, Hart-street, Bloomsbury.

ELIGIBLE PLOT of LAND TO BE LET, at Ward's Corner, Hackney.—68 FEET 4 FRONTAGE, with a depth of 120 feet. Moses advanced if required, on building on part of the land.—Apply to Mr. WARD, Wardsbridge, Surrey, ditto.

FREEHOLD LAND.—To BUILDERS or Parties wishing to build Suburban Residences.—FREEHOLD LAND TO BE SOLD on some of the most eligible building estates in the immediate neighbourhood of London, viz.:—
PORTESHILL, Orpington Railway.
ST MARGARETS, near Richmond, South Western Railway.
DAVIS'S ESTATE, Wood, Wandsworth, Surrey, ditto.
HOUNSLOW, Middlesex, ditto.
TOTTENHAM GREEN, Eastern Counties Railway.
TURNEY'S ESTATE, South Western Railway.
HIGHBURY ESTATE, EALING, Great Western Railway.
WADDINGTON ESTATE, ENFIELD, Eastern Counties Railway.
WOOD GREEN, Green-lanes, Hornsey, Great Northern Railway.
OLD FORD, Stratford, Eastern Counties Railway.
Part of the purchase-money may remain at 5 per cent. interest. Parties residing in the building of their own residences. Several Plots of Land on Building Leases. Money advanced to respectable parties.—Apply to Mr. GEORGE MORGAN, 5, Chancery-lane.

TO BE LET, with immediate possession, a spacious WHARF and GRANARIES, an eight-roomed House, with stabling for twenty horses, and to let for a term to the river Lea at Limehouse, near the Commercial road.—For particulars, Rogers and Sons, BRISTOW and TARRANT'S Offices, Basinghall-street, West.

BUILDING FRONTAGE, STAINING-LANE, CITY.—The Hall-reach Company are desirous of receiving TENDERS for taking, on building lease, for a term of 80 years, the site of their old Chapel, fronting 68 feet to Staining-lane, containing a frontage of 68 feet, and a depth of 70 feet. Tenders must be sent in not later than SATURDAY, SEPTEMBER 8th.—Particulars may be obtained at Haberdashers' Hall, Maiden-lane, West; or of Mr. SNOOK, Architect, 6, Duke-street, Southwark. JOHN CURTIS, Clerk.

BUILDER'S PREMISES TO BE LET, in London, situated near Westminster Bridge, consisting of a spacious OFFICE, with back Premises, having a wide entrance-gates, a dwelling, workshops, and stabling; all for 38l. a year, in consequence of the proprietor having retired. Mr. GEO. DOUGAL has let, during the last twelve months, at the above, eligible and compact premises, which have been established for twenty years, and 45l. will be taken for the improvements, fixtures, connection, &c. A rare chance for a young man to commence business in London. Apply to Mr. GEO. DOUGAL, 17, Milton-place, Westminster-road.

FREEHOLD LAND FOR SALE, in the Parish of Acton, near Turnham green, upwards of Twelve Acres.—Particulars of Mr. DEVEY, Architect, 16, Great Marlborough-street, Regent-street.

PREMISES TO LET.—Extensive Workshops, either separately or together, in Beaumont-place, in the New-road, or Offices in Osnaburgh-street, Regent's-park, in the New-road. For terms apply at 11, Newton's, Osnaburgh-street North.

POTTERY TO BE LET.—TO BE LET, with immediate possession, a POTTERY, at Parkstone, near Poole, Dorset, standing on an extensive bed of brick earth, and supplied with clay. There are two kilns, pipe machines, and every requisite for the manufacture of stoneware; also a brick-kiln. Business may be commenced with a small capital.—Apply to Mr. BRYANT, on the Estate, and at 107, Holborn-hill, London.

TO SECRETARIES of BUILDING and other SOCIETIES.—COMMODIOUS ROOMS, well adapted for Committee Meetings or Ballots, TO BE LET, on moderate terms, at No. 11, Bridge's-walk, Upper-street, Islington.—Apply to Mr. NEWSON, Estate Agent, No. 1, Chapel-row, Upper-street, and 30, Walbrook, City.

COTTAGE WANTED, within Ten or Twelve Miles of the Bank, containing about six or seven rooms, large garden, or a small garden with paddock, easily accessible by omnibus or rail. Rent and taxes, 25l. to 30l. per annum. Full particulars, prepaid, to Dr. W. Miles's Library, Upper-street, Islington.

IRONMONGER'S BUSINESS, in the Town of Bedford.—TO BE DISPOSED OF, on moderate terms, by order of the Trustees of Mr. Thomas Morton, Furnishing and General Ironmonger, the valuable and modern STOCK IN TRADE, together with the LEASE of the PREMISES, situate in the best part of the High-street, in the town of Bedford. This is a capital opening for a party seeking such a business. A purchaser will enjoy the privilege of free education for his children at the noble Harpur Schools, in Bedford.—For further particulars, apply to Messrs. KEEP and SONS, Merchants, Russell-street, St. Mary, Birmingham; to Mr. KILPIN, Ironmonger, Bedford; or to Messrs TURNLEY and SHARMAN, Solicitors, Bedford.

TO PLUMBERS, PAINTERS, GLAZIERS, &c.—An ESTABLISHED BUSINESS in the above line TO BE DISPOSED OF, in a main road to the City, a good trade attached, and capable of doing a first-rate business. Domestic affliction the cause of leaving. If taken immediately, can be had a bargain.—Apply to the Tyne Glass Company, Bridewell-wharf, William-street, Blackfriars, London.

TO ESTATE OWNERS AND ALLOTTEES

MR. JAMES WYLSON, ARCHITECT and SURVEYOR, 31, Church Row, Bedford Square, Kane-land (Copyhold) Surveyor to the National Freehold Land Society), ADVISES as to LAND and BUILDING SPECULATIONS.—A VACANCY for an OUT-DOOR ARTICLED PUPIL.

For Prospectuses apply at the Offices, 24, Guildford-street, Russell-square

AN ARCHITECT, in Edinburgh, intends to commence, in OCTOBER next, a Course of PRIVATE LECTURES on Architecture to Pupils, who may thus have the benefit of systematic instruction in addition to the training gained in offices. Particulars to be learned on application to R. S. 6, Office of "North British Advertiser," Edinburgh.

MONEY on LOAN, at 3*l.* per Cent. per Annum.—ARNEWAY'S CHARITY. NOTICE IS HEREBY GIVEN, that the Trustees of the Charity are enabled to lend out the Trust Moneys to Householders of unexceptionable character within the City and Liberties of Westminster, and to such within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James's, St. Martin in the Fields, St. Mary-le-Strand, and St. Paul, Covent-garden. The amount of each loan is not to exceed 15*l.*, to be at interest after the rate of 5*l.* per cent. per annum, and to be repaid by the borrower by weekly payments. Printed Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of ten and three o'clock, at the office of the Clerk to the said Charity, at the Trustees, No. 14, Great Queen-street, St. James's Park.
By order, EDWARD S. STEPHENSON, Clerk to the Trustees.

NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as may have been left in their office at the least before the first day of the month.—The sureties must be unexceptional ie.

LOANS at 5 per Cent. on personal security, in connection with Life Assurance. 200*l.* to 3000*l.* preferred. No delays.—English and Foreign offices, 15, Cornhill.
LEWIS C. HERTSLET, Secretary.

SOUTH WALES RAILWAY.—Notice is hereby given, that the next HALF-YEARLY ORDINARY MEETING of the Proprietors of the Company will be held at the GREAT WESTERN ROYAL HOTEL, Paddington, on FRIDAY, the 31st day of August inst. at ONE o'clock precisely, for the general purposes of business.

Resolutions will be submitted by the Meeting for the Directors to borrow on mortgage of the Tolls, Rates, and Duties of the Undertaking, and to direct the shares so forfeited to be sold or otherwise disposed of. To authorise the Directors to borrow on mortgage of the Tolls, Rates, and Duties of the Undertaking, and to direct the shares so forfeited to be sold or otherwise disposed of. To authorise the Directors to borrow on mortgage of any new shares, or any part thereof, such rate of interest or dividend, and with such preference, as may be determined by the said Meeting, and as may be authorised by the said Acts of the Undertaking. And also, if deemed expedient, to authorise the conversion of any portion of the borrowing capital of the Company into perpetual irredeemable annuities, under the powers and provisions of the said Acts.

The Transfer-books will be closed on the 17th inst. and will not be reopened until after the said Half-yearly General Meeting, to the 31st inst.—By order,

FRED. G. SAUNDERS, Secretary.

COMPETITIONS.

TO ARCHITECTS AND OTHERS

THE Burial Board for the parish of Newark-upon-Trent, in the county of Nottingham, is desirous of receiving DESIGNS, for surprise plans, elevations, sections, and specifications, with estimates, for MAKING ROADS and PATHS, and LAYING OUT and PLANTING a new BURIAL-GROUND, containing about six and a half acres, ENCLOSING the GROUND, BUILDING a LODGE, with entrance gates, BUILDING TWO CHAPELS, either separate or attached, with complete fittings and accommodation for not less than fifty persons, the total cost of the whole not to exceed the sum of 3,000*l.* A premium of 10*l.* will be paid for the best Design, and a premium of 5*l.* for the second best. The designs, with estimate of the costs, accompanied by working drawings and specification complete (without the author's name, but with a motto and sealed letter) to be delivered free of expense on or before the 7th day of SEPTEMBER next, at my Offices, in Kirk Gate, Newark, of whom a plan of the locality and further particulars may be obtained. The Burial Board do not bind themselves to carry out any of the designs. The architect will be held bound to undertake and complete the works according to his plans, for the amount of his estimate, if required by the Board to do so; but the Board do not pledge themselves to employ the architect whose design may be accepted.—By order of the Board.

WILLIAM NEWTON, Clerk to the Board.

Offices, Kirk Gate, Newark, 9th August, 1855.

N.B. The locality yields Ancaster stone for dressings, and white and red brick.

TO ARCHITECTS.—That part of the Church and Congregation which recently withdrew from Mr. Davies, of Caledonian-road Chapel, intend ERECTING a PLACE of WORSHIP in the Gothic style, and have instructed me to communicate with a select list of the profession in furnishing GRATUITOUS PLANS for a CHAPEL, in the Gothic style, at a cost of about 2,500*l.* to seat 600 adults and 200 children, with school-room, vestries &c. As the time is urgent, the committee feel that it is necessary to have days for receiving and communications at this appeal may bring forth, and for that purpose they beg to appoint the 5th of SEPTEMBER next as the day. Architects will please address their communications to Mr. WM. DRAPER, Secretary, No. 5, Richmond-terrace, Barnsbury; or to Mr. CUTHBERTSON, Wharfroad, Kingsgate.

CONTRACTS.

BEDFORD ESTATE, ST. PANCRAS.—To PAINTERS and OTHERS.—The Commissioners of this Estate are prepared to receive TENDERS for CLEANING and PAINTING the IRON RAILINGS of Fairhold, Gordon, and Huntingdon squares. The specification and forms of Tender may be seen at their Office, below, to which TENDERS are to be delivered on or before the 1st instant.

JOHN WOOD, Clerk to the Commissioners.

20, Gordon-street, Gordon-square, August 15 1855

TO BUILDERS.

THE BURIAL BOARD of the PARISH of ST. NICHOLAS, RICHENER, will meet at their Offices, Rosemary-street, WELVE o'clock at noon on MONDAY, the 10th day of SEPTEMBER next, to receive TENDERS for the ERECTION and COMPLETION of an EPISCOPAL CHAPEL, A DISSENTERS' CHAPEL, a SEXTON'S HOUSE, and Boundary Enclosures, with Entrance Gates &c. on the site of the new burial ground situate in the Maidenmead Tenements and other lands, as may be selected as the Office of the Board, on and after the 27th day of AUGUST instant, between the hours of TWELVE and FOUR. The Board do not pledge themselves to accept the lowest or any Tender. The contractor will be required to enter into sureties for the due performance of the work. No Tender will be received after TWELVE o'clock at noon on the said 10th day of SEPTEMBER next. By order of the Board.

Rochester, 24th August, 1855. RICHARD PRALL, Clerk.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Commanding Royal Engineer's Office, Dublin, 11th August, 1855.—The Principal Officers of Her Majesty's Ordnance hereby give notice that they will receive PROPOSALS for the following CONTRACT, viz.—For the CONSTRUCTION and ERECTION of STABLING for fifty troop horses, officers' stables, and infirmary stable at the Pensionary Barracks on the Curragh of Kildare, in the Dublin district. Persons desirous of tendering for the same, will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin; and may obtain specifications, with other documents, on application making a deposit of 1*l.* for the same, which deposit will be returned when the specifications are returned uninjured. The whole of the work to be completed within forty days after the acceptance of the Tender. The letter of Tender to be sealed, and transmitted, under cover, to "The Director-General of Contracts, Ordnance-office, Pall-mall, London," so as to be received on or before the 30th day of AUGUST, 1855, and to be marked on the outside "Tender for Work at the Curragh of Kildare."

ORDNANCE CONTRACT.—NOTICE to CARTERS and EXCAVATORS.—Sealed Tenders addressed Major-General Sir FREDERIC SMITH, K.H. Commanding Royal Engineer, will be received at the Royal Engineer's Office, at the Camp at Aldershot, on or before THURSDAY, 30th AUGUST, 1855, from such persons as may be willing to undertake to EXCAVATE on the HEATH, and DELIVER at the TEMPORARY BARRACKS, at ALDERSHOT, Hants 11,000 CUBIC YARDS of GRAVEL, at the North Camp, and 11,000 CUBIC YARDS in the South Camp, in separate contracts, each to be completed in three months from the date of the order for commencing the work. A map may be seen at the Royal Engineer's Office, Aldershot, showing the places where the gravel is to be excavated, and the relative distances for the cartage to the camp, and where may be obtained specifications and forms of Tender.

Royal Engineer Office, Aldershot Camp, August 23, 1855.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Commanding Royal Engineer's Office, Dublin, 4th August, 1855. The principal Officers of Her Majesty's Ordnance hereby give Notice, that they will receive PROPOSALS for the above CONTRACT, viz.—For the Works proposed in the CONSTRUCTION of LAND REFUGE DRAINAGE in the temporary barracks at the Curragh of Kildare, in the Dublin district. Persons desirous of Tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin, and may obtain specifications, with the forms of contract, upon making a deposit of 1*l.* for the same, which deposit will be repaid when the specifications are returned uninjured. The whole of the work to be completed within sixty days after the acceptance of the Tender. The letter of Tender to be sealed, and transmitted, under cover, to "The Director General of Contracts, Ordnance Office, Pall-mall, London," so as to be received on or before the 31st day of AUGUST, 1855, and to be marked on the outside, "Tender for Work at the Curragh of Kildare."

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives Notice, that sealed TENDERS, addressed to the DIRECTOR GENERAL of CONTRACTS, will be received at the Office of Ordnance, Pall-mall, on or before 4 P.M. SEPTEMBER 10th, for the ERECTION of a MILITARY PRISON, OFFICERS' and BARRACK MASTER'S STORES, &c. at the Wellington Barracks, St. James's park. The specifications and plans for the above service may be seen, and forms of Tender may be obtained, at the Royal Engineer's Office, 11, James-street, Pimlico, between the hours of TEN and THREE o'clock, from the 27th AUGUST to the 8th SEPTEMBER, 1855. The Ordnance Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineer's Office, London District, 23rd August, 1855.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 26, Greek-street, Soho-square, on TUESDAY, the 4th day of SEPTEMBER next, and on 3rd each succeeding day, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN certain IRON PIPES, and to execute other Works in connection therewith in extension of the Battle bridge outlet, Mill-lane, Tooley-street, Southwark, and for the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and specifications of the Works to be done, together with the form of Tender, may be inspected, and other particulars obtained, at the printed, at Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. on and after MONDAY, the 27th day of AUGUST instant, until MONDAY, the 3rd day of SEPTEMBER next. The Commissioners do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted, will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square.

Dated this 22nd day of August, 1855.

WICKLOW HARBOUR.—NOTICE to CONTRACTORS.—The Commissioners for Improving the Harbour of Wicklow are prepared to receive TENDERS from competent parties for the EXECUTION of the undermentioned WORKS, viz.—CONSTRUCTING a PIER and BREAKWATER of TIMBER PILING and MASONRY, DREDGING out the Bar and CHANNEL to a depth of EIGHT FEET at low water, and to REPAIR the existing QUAY WALL. The contractors are to set forth in their Tenders the period within which the works are to be executed and delivered in complete, according to plans and specifications prepared by HENRY BRETT, Esq. C.E. and which may be seen at the Office of the Secretary to the Harbour Commissioners. Wicklow, and upon application to Mr. BRETT, Engineer, 4, Harrington-street, Dublin. The Tenders to be sent in, sealed and addressed to the Chairman of the Harbour Commissioners, at or before TWELVE o'clock, on MONDAY, the 17th of SEPTEMBER, 1855.—By order,

ROBERT HARPUR, Secretary to Harbour Commissioners.

Harbour Office, Wicklow, August 16, 1855.

CONTRACTS.

TYNEMOUTH LOCAL BOARD of HEALTH.—SEWERAGE.—TO CONTRACTORS, EXCAVATORS, EARTHENWARE PIPE LAYERS, & OTHERS.—The Local Board of Health, give Notice that they are prepared to receive TENDERS from persons willing to undertake either of the following CONTRACTS:—

CONTRACT No. 3.—For EXCAVATIONS and LAYING SEWERS and DRAIN PIPES; also for the CONSTRUCTION of BRICK SEWERS, GULLIES, MANHOLES, and other WORKS, in the District of TYNEMOUTH.

CONTRACT No. 4.—For EXCAVATIONS and LAYING SEWERS and DRAIN PIPES; also for the CONSTRUCTION of BRICK SEWERS, GULLIES, MANHOLES, and other WORKS, in the District of NORTH SHIELDS.

The drawings and specification may be examined on and after THURSDAY, the 23rd inst., and duplicate forms of Tenders, Schedule, and Bills of Quantities &c. for each contract obtained, together with any further information required, on application at the Town Surveyor's office, North Shields; or at the offices of ROBERT RAWLINSON, Esq. C.E., Parliament-street, Westminster—Sealed Tenders, to be delivered at the Town Clerk's Office, North Shields, before TWELVE o'clock on THURSDAY, the 6th day of SEPTEMBER next, addressed "Tender for Contract No. 3 or 4," as the case may be.

Signed,

THOMAS C. LIETCH, Town Clerk.

North Shields, August 16th 1855

TO BUILDERS.

THE BURIAL BOARD for the PARISH of FARNHAM, Surrey, are prepared to receive TENDERS for the ERECTION of TWO CHAPELS, ENTRANCE LODGE, BOUNDARY-WALL, and IRON GATES and RAILING, on land purchased by them as a burial ground for the said parish. The plans and specifications, with conditions of contract, may be seen at the Offices of the Architects, Messrs. BARNETT and BIRCH, 3, Verulam-buildings, Gray's-inn; or at my Office, in Farnham, on and after the 20th inst. and sealed Tenders addressed "Tenders for Burial Ground Buildings," to be delivered to me on or before noon of WEDNESDAY, the 5th day of SEPTEMBER next. The Board do not bind themselves to accept the lowest or any Tender, and the contractor will be required to provide sureties for the due performance of the works.

By order of the Board,

CHAS. W. NIBLETT, Clerk.

Farnham, August 18, 1855.

TO BUILDERS.

PARTIES desirous to TENDER for the ERECTION of a HOUSE, with COACH-HOUSE, STABLES, and OFFICES, to be built on the Eastern Road, near Newport, Monmouthshire, are to the plans and specification now at my Office. Also to the plans of Messrs. JONES and PARNELL'S Offices, Newport, to which sealed Tenders are to be delivered, on or before the 5th of SEPTEMBER next. The lowest or any Tender will be necessarily be accepted. JAMES WILS N, F.S.A. Architect,

1, Belmont East

BRISTOL LOCAL BOARD of HEALTH.—To BUILDERS, CONTRACTORS, and OTHERS.—The Committee of the Bristol Local Board of Health hereby give notice, that they are ready to receive TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING and COMPLETING, in a substantial manner, certain intended Main Sewer, No. 1, from Which-lane into the river Avon, about 843 yards in length; Main Branch Sewers from Dean-lane, along North street, to the Hill and Chickens Public-houses, about 1,031 yards in length; from Mill-lane, along East-street, to Baccas-court, about 738 yards in length; from Mill-lane, along Easton-street and West street, to Alma-house, about 1,188 yards in length; Main Sewer, No. 2, from Parson-street to the river Avon, about 2,970 yards in length. Any person or persons willing to engage for making the before named sewers, are requested to deliver Tenders for the same at the Offices of the Local Board of Health, No. 1, Prince-street, on THURSDAY morning, the 6th day of SEPTEMBER next, at ELEVEN o'clock precisely, when the Committee will meet to determine upon the same. Trial shafts have been sunk along the several lines of sewers, and are now open for inspection, and the plans with the specifications of the works to be done may be seen at the Offices of the Local Board of Health, No. 11, Prince-street, Bristol; and any further information may be obtained either on personal application or by letter, post-paid, addressed to the Surveyor, Mr. FREDERICK ASHMEAD, C.E. The party tendering will be required to give the names of two responsible persons willing to become sureties for the due performance of the works. The Committee will not bind themselves to recommend the acceptance by the Local Board of the lowest or any Tender, nor until the proposed sureties are approved. By order of the Committee,

JOHN G. HEAVEN, Clerk

Local Board of Health Offices, 13, Prince-street, Bristol,

August 16, 1855.

THE CONSERVATIVE LAND SOCIETY.

OFFICES and WAREHOUSE, DOWGATE DOCK, LONDON.

TO ARCHITECTS, BUILDERS, AND THE TRADE.

PATENT PLUMBIC ZINC.

GREAT REDUCTION IN PRICE.

PLUMBIC ZINC is a perfect combination of Lead and Zinc, and not requiring to be more than one-fourth or one-fifth as thick as Sheet Lead, is consequently very much cheaper than that material, and at the reduced price costs but little more than Sheet Zinc.

No. 11 gauge weighs about 18 oz. per foot super.
12 " " 20 "
13 " " 23 "
14 " " 26 "

Full particulars and the reduced price sent by post on application to

A. MOREWOOD and CO DOWGATE DOCK, LONDON, to whom all letters must be addressed.

And every material required in the building, fall hanging, upholstery, and brass-foundry trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

January 1, 1855.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of 2 lbs. to the square of 100 feet, the cost of carriage is small.—4th. From its lightness, weighing only half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel.

and deadening Sound.

ODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

PLATE-GLASS for GLAZING PURPOSES.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough, and of all respectable ironmongers, builders, &c.

SMOKE! SMOKE! SMOKE!—The only cure for smoky chimneys is MARK BERRY'S IMPROVED VENTILATOR; price, for 10-inch pot, 7s. 6d.; 11-inch, 8s. 6d.; 12-inch, 9s. 6d.—At MARK BERRY'S Wholesale and Retail Zinc and Galvanized Iron Works, Whitechapel Church-yard, London.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATERS of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE. RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

STUART AND SMITH'S
PATENT GILL AIR WARMER.

TESTIMONIALS.

RICHARD REDGRAVE, Esq. R.A.

"18, Hyde-park Gate, Kensington, February 24, 1854

"My dear Sir,—The Air Warmer continues to work very satisfactorily indeed, with regard to the main body of the house, and during this weather is charming, even in the painting room. Mrs. Redgrave is extremely pleased with it in her domain, and says that she never enjoyed a winter before as she has since the apparatus was fixed.—I remain, my dear Sir, yours sincerely,

"Mr. J. Jobson Smith." "RICHARD REDGRAVE."

JAMES SILK BUCKINGHAM, Esq. late M.P. for Sheffield.

"Stanhope lodge, St. John's-wood, London, January 27th, 1855.

"Dear Sirs,—I am happy to be able to report to you most favourably of the operation of your Patent Gill Air Warmer, which has exceeded the expectations I had formed of it. From a residence of many years in Hyde-park Gardens, I have always been peculiarly susceptible of cold since my return to this country, and this has increased with increasing years and decreasing strength. I have, therefore, had recourse, from time to time, to various stoves and other modes of warming the hall and passages of my house; but I have never succeeded till now in producing an equal temperature in every part, and having that temperature completely under control, which your Air Warmer so effectually gives me. By its use we are ready to meet the various changes of temperature and draughts which are ordinarily produced in passing from warm rooms to cold halls and passages, and have not made up my mind to do so in the months of December and January. The servants find it a great comfort in a few days without difficulty, and its economy in fuel is as remarkable as the many other good qualities it possesses. Indeed, I cannot speak too highly of it, and shall have no hesitation in recommending its adoption to all who desire to protect themselves against the changes of temperature in their dwellings.—I am, dear Sirs, yours faithfully,

"JAMES SILK BUCKINGHAM.

"To Messrs. Stuart and Smith, Roscoe-place, Sheffield."

M. E. HADFIELD, Esq. Fellow of the Institute of British Architects.

"Sheffield, March 8, 1855.

"My dear Sirs, We have kept the Gill Stove in full operation during the past severe weather, and I have much pleasure in saying the result has been most satisfactory. The temperature of the house has been pleasant and equable, and the atmosphere perfectly free from the close and disagreeable effects so many friends complain of in Hot Air Stoves. I can conscientiously recommend the principle to my friends as being unobjective. I am, my dear sirs, yours faithfully,

"Mr. J. Jobson Smith, Roscoe place." "M. E. HADFIELD.

WILLIAM RUTSON, Esq.

"Newby Wiske, Thirsk, 15th February, 1855.

"Sirs,—I wish to tell you what promise of comfort as well as of economy I have in the Gill Stove placed in the staircase of my house (see the bill). Results of the most satisfactory nature are likely to follow up a very genial influence over the temperature, even during this severe weather. The manner in which the air is admitted gives perfect control over the combustion; and I find, with coke at 16s. 3d. per ton, the rate at which it has been fired for the last two or three months, is 1d. per hour.

"I am, Sirs, yours truly, "WILLIAM RUTSON.

"Messrs. Stuart and Smith.

"P.S.—Mr. Rutson, on looking again, sees the cost of coke for his Gill Stove, burning nine hours per diem, from 31st October to 9th February, for six days each week, was 3l. 6s. 6d. for coke; say about 5d. per day."

EDWARD MARTIN, Esq. M.R.C.S.

"Sheffield, Glossop road, February 27th, 1855.

"My dear Sir, I have now had the Patent Gill Air Warmer in operation during two winters, and the result has been extremely satisfactory. During the late severe frost, the comfort has been so great that I scarcely know how we could have done without it. Instead of the hall, staircase, and passages, being a reservoir of cold air, a genial warmth has been everywhere diffused; and when recovering from colds, my children have derived the general benefit of the house without the fear of a relapse. To many invalids the invention will prove invaluable, coming from the free form of their habitation instead of confining them prisoners to one apartment. But, sir, me, my dear Sir, very truly yours, "EDWARD MARTIN.

"Mr. Jobson Smith."

E. F. SANDERSON, Esq.

"West-street, Sheffield, 27th March, 1855.

"Gentlemen, The Gill Air Warmer you put in for me last year at Endcliffe, and which I regarded with some distrust and doubt, has been thoroughly tested during the past unusually cold winter. Having been accustomed to a dry climate, my family has been painfully sensitive of the damp and chilly air of this country; but by the happy efforts of your Air Warmer the house has been kept at a most agreeable temperature by a continued ventilation of pure, warm, fresh air. This excellent apparatus must be invaluable to invalids and delicate persons. I most cordially offer my testimony in approbation of your effective plan of rendering dwelling-houses most equably comfortable in point of temperature. I am, yours very truly,

"Messrs. Stuart and Smith, Roscoe place." "E. F. ANDERSON.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

COTTAM AND HALLEN,

the original projectors of the above arrangement of MANGER, RACK, and WATER TROUGH AS ONE FIXTURE, which obtained the Great Exhibition Prize Medal, and unanimously approved of, have added all the latest improvements to their invention (for which they patent), which includes an entirely new method of attaching the hinder bail and iron, giving to the horse greater freedom, and rendering it less in operation, add much to the comfort whilst feeding and convenience when at rest.

COTTAM'S ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and impervious to infection; manufactured PLAIN, GALVANIZED, or ENAMELLED.

Improved Stable Guttering, with Moveable Safety Covers.

Loose Box Fittings, Harness-room Appendages, and every Article in Stable Furniture kept on Show.

Descriptive Catalogues and Estimates on application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

IMPROVED PUMPS,

Of the best Workmanship and warranted.

The VALVES and SUCKERS of these Pumps are constructed upon an entire new and SIMPLE principle; they are not likely to get out of order; should they do so, can easily be repaired, as the Plan is so contrived that the valves can readily be got at.

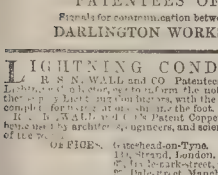
An Improved CAST IRON TRAP strongly recommended by the Sanitary Commissioners, and suitable for Sugar Bakers, Slaughter Houses, &c. &c. It is so constructed that the plate will pass and master the iron so that will let the trash and therefore sand have no stoppages and will stand in the stables and stable yards, for saving the best part of Liquid and Manure.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

LIGHTNING CONDUCTORS.—R. S. N. WALL and CO. Patentees of the Copper Rope Conductor, beg to call the attention of the nobility, clergy, &c. that they supply their conductors, with the point and all staples complete for fixing at one shilling per foot.

R. S. N. WALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES, Gateshead-on-Tyne,
19a, Strand, London.

Duke-street, Manchester.

TO BELL-HANGERS, GAS-FITTERS, &c.

IRONMONGERS, &c.—The Trade supplied on the usual terms with Bell Wire, Tube, and Copper Wire. Gas Pendants, and Brackets of all descriptions for gas-fitting, in Brass and Bronze Tube, Cocks, Iron and Brass Tubing, Glass Shades, Globes, and Lackered Case Tube for Picture Rods. Lists free.

Engravers' Bed Rests for Engravers, Castings in Fine and Common Brass, Bronze, &c. at

RICHARD EVERED'S Brass and Bell Foundry and Metal Warehouses, Nos. 11, 12, and 13, Charles-street, Long-acre, London

NAILS and IRONMONGERY, from BIRMINGHAM direct.

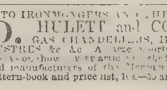
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES

a complete List of which will be forwarded upon application.

FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Orchard-street, LONDON.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend, with confidence, their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, and, instead of the large amount of fuel with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and heater department of the New Drapery establishment; where may also be seen engravings with prices, or forwarded by the post. DEANE, DRAY, and CO. opposite to the Monument, London-bridge. Established A.D. 1700.



ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and JEFFRIES'S PATENT. The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accident from fire are all entirely prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at JEFFRIES'S Office 14, Regent-street, London.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen in full operation, heating building measuring 400 feet in length, at the small expense per day of 1s. 6d. Estimates, &c. The achievement in heating by hot water is unprecedented.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS

THIS IS THE ORIGINAL PATENT

Improvements in stable fittings, including a method of preventing the stamps and latter-rests from the back of the fittings, to prevent the horse being cast in the stall. Stable Fittings of every description, enamelled or galvanized. Milk pails, Pitchers, Funnels, and Strainers in stock; Iron Hurdles, Gates, Fencing, &c. &c. Manufacturer of King's Patent Stables, Cast Iron Smoke Curing Chimneypots, 2½ in. Patent Sunshine palace. Price Lists sent on receipt of two postage-stamps.

JAMES BARTON, Iron Founder, &c. 37, Oxford-street, a few doors East of the Pantheon.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

The invention is now in operation upon Steam engine Furnaces, of Cornish and Warson Boilers, and upon them it is adapted to other descriptions of Furnaces, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions that have sought to prevent Smoke Nuisance, and in many instances with a diminished consumption of fuel.

Ten furnaces, of various description, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, and Co., Essex, London.

Address, THE SMOKE-BURNING COMPANY, Adelaide, London.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTHORNS, GLASS LUSTRES &c. &c. A large assortment of the newest designs always on view, every article priced in plain figures. Patentees and manufacturers of the Improved Gas Regulator. Complete pattern-book and price list, 1s.—3s. and 5s., High Holborn.

CHUBB'S LOCKS & FIREPROOF SAFES.

CHUBB'S LOCKS & FIREPROOF SAFES.

EFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH WESTERN RAILWAY COMPANY.

"London and North-Western Railway Company,
"Liverpool, May 17, 1854.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office and which, notwithstanding the great efforts of one or more burglars to get at the money chest in the night of Tuesday last, although it is evident that a most determined force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"8, Great Vine-street, May 3, 1853.

"Gentlemen, I have the pleasure to inform you, that my house one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY.

"Superintendent C Division of Police.

"Messrs. Chubb and Son."

CABINET-MAKERS, &c.—To be had, at FRENCH'S IRONMONGERY WAREHOUSE, 56, Great Portland-street, Oxford-street:—Self acting Cottage Ranges, 30-in. 28s.; 32-in. 30s.; 34-in. 33s. each. Register Stoves, 6d. per inch.; Elliptic ditto, 9d. per inch. Floor Brads, 4s. 6d. per cwt.; Sprigs, 4s. 6d. per cwt. Clasp Nails, 1½ in. 15s.; 2 in. 14s.; 2½ in. 13s. 6d.; 3 in. 13s. per cwt. Sash Line, Patent, No. 4, 5s. 6d.; No. 5, 8s.; No. 6, 9s. 9d. per gross. Glue, Brown, 46s. per cwt.; Scotch, 65s. per cwt.

Terms, net cash, on or before delivery.

SAWING, PLANING, and MOULDING

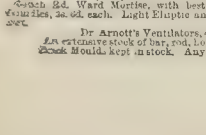
MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Joiners' or Cabinet Work, Sawing, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. As they will continue to give that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

NEW PATENT MACHINE for

MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.—Horse and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentee's, JOWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 36, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work in one machine; and as it is self feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

F.S. Steam Engines and Machinery contracted for.

TO IRONMONGERS, BUILDERS, &c.



PATENT WROUGHT-IRON WELDED

TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c Manufacturers of Dr. Arnott's improved ventilating Cocks.—HULETT and CO. 55, High Holborn.

CLARK and HUNT'S IRONMONGERY,

STOVE, and METAL WAREHOUSE, 156, Shoreditch.

A great variety of Elliptic, Register, and other Stoves, Cottage and best Ranges fitted, always in Stock.

Improved Self-acting Cottage Ranges, with Large Oven and Boiler,

Illustrated and priced sheets of moulding designs and general price lists of goods forwarded post free on application. Goods free to any part of town, including the various railway and canal stations.

N.B.—Sawing and planing for the trade.

TO TURNERS, TIMBER-MERCHANTS, AND OTHERS.

TO BE SOLD, 1,000 large PEAR-TREES,

in sound condition.—Apply to W. BRANDON, 9, Portland-terrace, Rotherhithe, Surrey.

STEPHENS'S STAINS for WOOD.

Testimonial to the value of:—

"Northgate, Colchester, February 5, 1855.

"Sir,—I have just finished a new church with your oak stain, and I consider it the best adapted for the purpose, being the nearest approach to the real wood of any I have ever used.

"I am, sir, your obedient servant,

"SAMUEL GRIMES, Builder.

"To Mr. Hy. Stephens, 54, Stamford-street, London."

NOTICE.—IMPROVED WOOD MOULD-

ING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments, tombs, and every description of marble and stone work also manufactured by patent machinery. NEW WORKS, No 20, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 100 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by enclosing six postage-stamps.—Please note the address—20, BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums. Policy-holders participate in profits after payment of five annual premiums.

The Annual General Meeting of the Society was held on the 30th of May, 1855, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appears that during the two last years, 1853 and 1854, between 800 and 900 new Assurances had been effected, producing an increase of premium income amounting to 1,600l. per annum. It also appeared that, notwithstanding the extraordinary mortality which prevailed during the last year in consequence of the visitation of the cholera, it had not been found necessary to reduce, by the slightest, the allowance previously awarded to the Policyholders.

The Members present at the Meeting were fully satisfied with the Report, and resolved unanimously that a Reduction of 31½ per Cent should be made in the current year's Premium payable by all Policy-holders now entitled to participate in the profits.

Credit is allowed for half the Annual Premiums.

The following Table exemplifies the effect of the present reduction:—

Age when Assured.	Amount Assured.	Annual Premium originally paid.	Allowance of 31½ per cent.	Annual Premium now payable.
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	6 11 6	14 6 0
30	1,000	25 13 4	8 1 8	17 11 8
40	1,000	33 18 4	10 13 8	23 4 8
50	1,000	48 16 8	15 7 8	33 9 0
60	1,000	75 17 6	23 18 0	51 19 6

The Builder.

Vol. XIII.—No. 655.

IN our view of the kaleidoscope changes of French art, we have reached the last two years of the eighteenth century.* Now, in the words of Napoleon, forty centuries looked down upon the Gallic host from the summit of the pyramids. It is said that when the army arrived within sight of the vast remains of Thebes—though Karnak, Luxor, and Medinet-Abou were then viewed as separate cities—the troops stopped, awe-struck by the sublimity of the spectacle. That story may be apocryphal; but of the impression produced on one "corps" of the army, the folio volumes of the great French work are fortunately a standing monument.—We can but regret that in the case of the recent British expeditions, representations made at the opening of the campaign were unattended to, and that our *savans* were not at hand at Kertch, to do their part in the way of preserving record, and preventing the disgrace to the British name of wanton spoliation. In France, the result of the expedition to Egypt was, that architects, sculptors, and painters, were now fired with enthusiasm for everything Egyptian. The work of making Paris a new Thebes, was actually commenced by buildings in the Rue des Colonnes and the Place du Carre, of which there were lately some remains. There can be no doubt of the value of the lessons to be derived from Egyptian architecture; but it seems the fate of all attempts to imitate the details of the style out of its country, to be simply ridiculous; and that result was attained in France. The better influence of David in painting regained sway, and prevailed till 1806; beyond which time, the growth of art was more decidedly progressive; the improved colouring of Gros, and the natural treatment of Granet being employed on subjects nearly allied to the interests of daily life. From the exhibition in 1806, of the picture of the Plague at Jaffa, by Gros, we may date the commencement of an opposition to the doctrine of The Ideal held by David; and again, by the law of progress, as we may call it, observed in other cases, the pupils of the new master, accustomed to regard truth without making the beautiful a necessary condition, fell into the apparent choice of deformity, which has been noticed in a much canvassed English section of artists during the last few years.

We, however, did not intend to pursue the history of painting in France, further than it might elucidate the history of general art. Could we do so, the names of H. Vernet, Géricault, E. Delacroix, L. Robert, Ingres, Delaroche, and Ary Scheffer, would be suggestive of some interesting speculations on the different changes of manner which have occurred down to our own time. But, it is desirable to revert to the fact of long continued maintenance of some order of classicism by the David school. This, beginning with the republic, received new importance from further political events. The formation of a governing power under the designation of "consulate"—the choice of the eagle standards—the *imperial* dignity assumed in 1804—all are obvious exemplifications of a prevalent tendency in thought; and the robes and other insignia of power and office, were modelled expressly with a view to perpetuate the association of ideas which had grown out of the admiration for the Roman name. Furniture, which had retained much of the Louis XV. character, though with greater rigidity, during the reign of Louis XVI. became stiff in outline, and often tasteless where ornament was attempted. The style referred to was not of very long duration, but prevailed to a sufficient extent to be well known. Rigid forms; the *lictors' fasces* used for support; the Napoleonic emblems and insignia, and a constant use of gilding, appear to us amongst the characteristics. Straight-backed, straight-armed chairs, wholly gilt, or black with gilt beadings or star-shaped ornaments, were not uncommon in England. They are due simply to the absence of any real taste.

In general architecture and decoration, the most important works of the empire are those of Percier and Fontaine. The style of these men, profusely exemplified both in buildings and published designs, has been characterized as the affectation of the antique: but whilst it is founded on a classical basis, it displays original merit. As others have done, the new emperor—by no means secure from conspiracy—sought to occupy the public mind with works of art, and the men just named were at once set to the old *pièce de résistance* of French architects—the still unfinished palace of the Louvre. The elaboration of designed details in the "Arc de Triomphe" of the Tuileries, and in the celebrated publication, the "Recueil de Décorations Intérieures," is is more wonderful than anything in the works of English architects,—unless we except some one or two buildings of very recent date, and different style.

The puritan Palladian element disseminated from Italy over Europe, had been supported in France mainly by Gondouin, the architect of the Ecole de Médecine. In England the general architecture at the end of the eighteenth century, must have been at a very low ebb. We are apt to speak slightingly of many later efforts, let us look at some of those during the period we allude to. About that time, increased church accommodation had been needed. Many chapels-of-ease and proprietary chapels were therefore built. We find the following dates:—Percy Chapel, 1769; Bentinck Chapel, 1772; Titchfield, now Welbec Chapel, about 1774; Fitzroy Chapel, 1778; Portland Chapel, 1779; Quebec Chapel, 1788; Margaret-street Chapel, 1789; St. James's Chapel, Hampstead-road, 1792; and Brunswick Chapel, about 1795. The architects living, were most of them men of skill; but whenever a fair proportion of building has to be done, it requires a considerable number of architects to produce any general character in public taste. The ordinary houses, therefore, remained either wholly guiltless of an attempt at art, or were mere *caricatures* of one or other style. Those who were employed on the more important public and private buildings, were indeed artists of no mean pretension. Henry Holland, and James Gandon, of Dublin, used the Palladian, or columnar Italian architecture, with considerable success. In striking contrast to such men was the style of Sir John Soane, whose long professional life may be taken as commencing with the year of his return from Italy, as early as 1788,—the year of the death of "Athenian" Stuart, of Sir Robert Taylor, and of Gainsborough, the painter. Within the next four or five years, Soane had published designs, commenced many buildings, the Bank of England included, and made designs for a new House of Lords and entrances, and for new courts of law.

An opinion from Sir William Chambers, who was living till 1796, upon the new manner, would be interesting, and perhaps valuable. If the labour of the architect's profession be somewhat onerous, the ranks of the profession have included men who have passed beyond the threescore and ten. What might be the interest and value of the autobiography of some of them? Soane had made his design at Parma for a triumphal bridge, before either Schinkel or Klenze were born, and before what is perhaps the greater portion of the architectural work of England and France—whatever its merits—had been thought of.

The earliest portion of the Bank of England—of which, part (the back of the Threadneedle-street front, towards the court) is yet remaining—was by an architect named Sampson. To this building Sir Robert Taylor had added two wings of columns, with projections surmounted by pediments, and other parts. Some of Taylor's work is still to be seen in the architecture of the Garden-court, and we believe near the Bullion-office. Taylor, we may remark, was the architect of the triangular block of buildings which were removed on the erection of the Royal Exchange. The basement of these was in excellent taste, and the plan was a most skilful application to a difficult site. Of the same architect's style, an example which may be readily referred to, is the Pelican Fire-office in Lombard-street; the good stonework of which, with the sculpture by Lady Diana Beauclerc, has just lately been daubed with a needless coat of yellow paint. Soane's style differed not only from Taylor's, but that of all his contemporaries. He supported the doctrine of predominant novelty, and with much success. His style is valuable, not merely in showing what may be done at all times, even under the perplexities of modern art; but it is often suggestive of new ideas in matters of detail; whilst admittedly, the architect has realized many beautiful pieces of effect, especially in his interiors. Here, in domical vaultings, and the management of the lighting, he is often singularly happy; and his house in Lincoln's-inn-fields is full of novel contrivances, deserving of study with reference to more important buildings for like purposes. Where the style failed, the failure seems to us due to the regard for novelty, as though it were the *sole* end of art. The details used by Sir John Soane were produced by very simple means. They usually consisted in the reverse of the ordinary, or *relievo* mode of decoration; and as in the leaves of the particular Corinthian capital which he generally followed, ornament was expressed by incision rather than projection. Thus, much of his work has been scored over till all his stock of patterns was exhausted, and he has been obliged to hit upon any childish form of line or curve, like that round the arches of the Rotunda in the Bank. Frets; panels chased with lines; honeysuckle acroteria; paterae; and ornaments, made up of rows of beads; flutings; or rope ornament; he was very fond of. Chimney-openings were often treated by him with a simple fret, or other incised pattern, in place of jambs and mantel; an idea that might be worked upon with advantage,—having regard to the tasteless manufactured chimney-pieces which are often the architect's only alternative. He commonly placed his orders on a stylobate, the bases being without plinths. He used pilasters, or antæ, of the slightest appreciable projection, though Sir Wm. Chambers had laid it down as an axiom, that these members should never project less than one-fourth the diameter. Archivolts carried to the ground as architraves, imposts being omitted, and square-headed niches are general. In the use of horizontal rustic work, or that sort where the perpendicular channellings are omitted, he occasionally grouped the divisions with effect. In monuments and tombs, he seems to us to have given the sepulchral character with considerable originality and taste,—though some details may be open to objection. His own tomb in St. Giles' Cemetery, Old St Pancras-road, and the structure at the back of the National Debt Office in the Old Jewry, now fast perishing, and which, if we recollect rightly, was called a Cenotaph to the Memory of William Pitt, may be quoted as examples. We should not omit to notice, that the archi-

* See p. 393, *ante*.

tecture of the Bank would, strictly speaking, be at issue with some commonly asserted principles. Columns, unrequired by any original disposition of plan, and doorways which cannot be entrances, are scarcely consistent with the letter of architectural law; still the result is pictorially effective—the north-west corner, indeed, in spite of uselessness, is highly so—and the whole is really a clever mode of treating what is mere wall,—a solution of a problem such as might be attempted often in street architecture with different means, and with great advantage. In short, what Soane did, whilst it does not affect the importance of rules, shows that rules are insufficient to make the work of an artist, and that it is inadvisable to dogmatize about them. It is to be regretted, as in many similar cases, that the iron railing is so placed, as often to obscure the designed proportions of the order. Soane had many imitators during his lifetime: it is perhaps not to be regretted that these have now decreased. The Bank was in progress for several years, and the south front was not commenced till 1823. Its chief defect, the want of height, has been cleverly remedied by Mr. Cockerell. Soane had been long before, elected a Royal Academician, and as one of the architects of the Board of Works, was entrusted with some of the chief Government commissions, a few of which may call for notice hereafter.

Other architects of the Italian school practising at the end of the eighteenth century, were Joseph Bonomi and James Paine. The work of the former which lies nearest for reference, is at Uxbridge House, Burlington-gardens; for, to this architect must we ascribe the front of the building, generally due to the architect Vardy. It has an odd number of pilasters; but is more remarkable for the injudicious use of a mere casing of stone, and on what is not even the front of entrance. This practice of making "show fronts" is not altogether a recent one, as it has been said to be, the late Roman churches having almost universally such fronts. Paine was employed both in London and the country, but is chiefly known for his published designs. There were, however, two men whose works deserve somewhat longer notice. These architects were Henry Holland and James Wyatt. The former has, perhaps, never received full justice: the latter was assuredly in his time greatly overrated. The notice, however, must be deferred till another article, in the course of which we hope to get fairly launched in something like a consecutive current of progress with the works dating in the nineteenth century.

MAIDEN-LANE AND VALLEY OF THE FLEET.

HOW WE IMPROVE.

Along the valley of the Fleet, from Coppice-row to Farringdon-street, the work of demolishing old and rotten dwellings is carried vigorously forward, and on the opposite side of the street, a little to the south of the Clerkenwell Sessions House, many dwellings of a date anterior to the Fire of London are now being removed. The west side of the street from here towards Cow-cross-street, and then towards the Fleet, would seem to have been built long before the Sessions House. Rose-alley, Frying-pan-alley, and the numerous narrow courts in this neighbourhood have been before mentioned by us. Bear and Staff yard, Vine-street, and other old names of the streets west of the Sessions House, remind us of the time when they looked into the fields. It is curious to stand now at Coppice-row and see the fine view of St. Paul's Cathedral which is opened out by the removal of these buildings. Eighteen or nineteen years since it was by no means even safe to venture into the neighbourhood which is now cleared. It was a dreadful place, filled to overflowing with the worst sorts of wretchedness and vice. When the removal of some of the houses in Field-lane discovered this comparatively unknown region to the sight of the thousands of passengers who pass along the great thoroughfare of Holborn, great was the astonishment of those who then came to take a peep at the unnatural-looking buildings which stood by, and in some instances were built over, the Fleet river. Many a story of Jack Sheppard, Jonathan Wild, and other well-remembered and not sufficiently despised vagabonds, was told to curious listeners, and tales of murders and robbery; of deceitful trap-doors, through which unwary visitors had been slipped into the Fleet; of bones and fragments of bodies buried in the basements of the dwellings. These and such like legends were commonly circulated about the place, and some of the houses near the top of Field-lane were exhibited to those who were curious, on the payment of a certain sum, and hundreds thronged to see the house of Jack Sheppard, which had thus, it was said, been brought to light. This, no doubt—bad as was the taste that prompted it—was attended with good, for many were here brought to see dwellings such as they could never have dreamt of, and children and men of such a stamp as would make all, except the most thoughtless, shudder. But dark and dismal as were the traditions which lent a sort of romance to the place, we believe that many a deed of horrible importance had been acted there which was never brought to light. In the heart of this region were filthy shops, in which loathsome food was offered to scores of those who for years had not ventured forth into the public streets, who had not made a trade of begging, but by their squalid looks and clothing defied the imitation of those artistic individuals who prey to such a considerable extent on the street alms-giver.

The public-houses were pandemoniums; the Jew lodging-houses could not be passed over without notice, nor the numerous shops of the dealers in old iron and other matters standing open for the convenience of the light-fingered.

We do not remember noticing a school (as we understand the word) within this dark "shadow." Let us forget it, with the pauper grave-yard, which was thought, in the times when thousands could be found who believed in the salubrity of such places in the midst of our cities, to be conveniently near the Fleet; also, the manufactories, dust-yards, the crowded tenements, such as those in the Sand-yard, and look with pleasure at the beautiful dome of St. Paul's, and at the great thoroughfare which is now being opened; and having at hand Chamberlain's map of 1770 (which, by the way, is worth reproducing), we notice it shows Hockley-in-the-Hole, Bay-street, and a few houses on the west side of Coppice-row, *the Small-pox Hospital*, and then no houses until we reach the Bagnigge-well Tea-gardens, near which is a place marked "Black Mary's Hole." The origin of this name we have not been able to discover.

Since 1770, the Small-pox Hospital has been twice removed, first to King's-cross, and thence into the country;* and during the last five or six years, the houses and population which we have faintly sketched (the houses at any rate) have been dispersed and destroyed; and as we believe that nothing, taking all circumstances into consideration, could be worse than the state of the Fleet-valley, we may expect that the people will be better off: but no time should be lost in providing wholesome lodgings, for such as are thus driven forth.

Glancing from time to time at places which have been formerly referred to in the *Builder*, we find in Frying-pan-alley, and elsewhere, that the population is as thick as ever; almost invariably the people say that they are unable to find suitable accommodation. Some of these places have been drained, and were comparatively free from disease during the last attack of cholera, but the dwellings are still dilapidated, and, for such accommodation, expensive. The water comes in on the Sunday, and all say that this is a great blessing to them, only that it runs for too short a time. In many of these poor neighbourhoods, the water-casks and tanks have been cleared away, and a small leaden pipe, not more in many instances than 8 or 9 inches from the ground, supplies each court for a limited time: this mode is, to a certain extent, more wholesome than the tanks and water-casks, so closely placed to the "closets;" and yet even this plan is very inconvenient and insufficient: for instance, let us take a court or alley containing twenty-five houses, let into tenements, eight families in each house—we should thus have 200, or if we say six families in each house, we should have 150 families. Imagine these rushing to the water, which, perhaps, does not run more than half an hour, and the scene of confusion and quarrelling which takes place. Then, again, many have few vessels in which water can be kept; these come down, perhaps, with an old tea-kettle, or broken stone bottle; and the contents of this will be all the water a family will be able to collect until the next day, unless they borrow it or fetch it from other places. It is needless to say how completely this puts cleanliness out of the way of many who may be even well-disposed. We inquired at several of the houses between five and six in the evening, and found three out of four without water; and it seems barely necessary to repeat, that such as was preserved in such an atmosphere could not be wholesome.

In Apollo-court, Bell-yard, Temple-bar, and many other places in this neighbourhood, this plan has been brought into use, and the same complaints are to be heard: there are no taps on the leaden pipes. Bailey-court, Bell-yard—described in the *Builder* five or six years since—is still undrained: even the surface-water passes down Bell-yard in front of the shops, &c. into the great thoroughfare of Fleet-street at Temple-bar. In all these thickly-populated courts there should be, if not cisterns, at least a supply of water from a tap at the main for say three hours in the morning and three hours in the evening of every day; and we believe that but little water would be wasted: the best-disposed of each locality would act as a sort of police, and prevent the waste of this necessary of life.

If we cannot tell what has become of the population of the Fleet valley, we are unfortunately in no doubt about the place to which several of the *manufactories* have been shifted, and that is no farther off than Belle Isle, Maiden-lane. Here horses are melted, not in rotten looking sheds such as those were by the Fleet, but in solid-looking buildings which seem to be intended to carry on the work for years, independent of considerations of the health of the neighbourhood, public opinion, or the law. A year or two ago a few words were said in this Journal about Maiden-lane, and since then the manufactories have increased in numbers, and in size; and the place, particularly towards the east, has become covered with streets. The smells which come from this district when the wind blows from the "balmy west" (the reverse now, however, to the inhabitants of this part of Islington), are most sickening, and from some of the large chimneys of Maiden-lane come like huge clouds of black smoke over the place. Nor is the evil confined to Islington; for, of course, as the wind shifts, Camden-town, Somerstown, &c. are visited by the poisonous vapour.

If, however, you venture in the course of inquiry to state to any of the manufacturers the complaints heard from the neighbours, you will probably be laughed at as the veriest jester. "Ha, ha, ha! I cannot help laughing, sir. Why, this is a *nuisance neighbourhood*. What business have you to interfere? Leave us alone, sir—we neither hurt ourselves nor anybody else." Let us, however, say, in reply, that what seems sport to him, is death to many; and it is worthy of remark, that one person who so replied, careless of others, and strong in the opinion of the wholesomeness of his trade, was himself carried off by the last attack of cholera.

The report of the health of the metropolis for the week ending the 11th August, mentions that the wind had blown for some time from the west and south-west, and that "of the five divisions of London, the greatest number of deaths from diarrhœa occurred in the north and east districts; and it deserves to be remarked

* "In 1746 an hospital was founded for relieving poor people afflicted with the small pox and for inoculation, and this was the first of the kind in Europe. It consisted of three houses,—one in Old-street, for preparing patients for inoculation; another in Frog-lane, Islington, where the disease first broke out; and the third in the Lower-street, Islington, for patients in the natural way."—*Chamberlain.*

that of thirty-seven registered in the north division, fourteen occurred in the district of Islington, only two occurred in Wandsworth, and none in Camberwell."

Not, however, to enlarge upon this matter, we assure our readers that the manufactories of Maiden-lane are most injurious, and that many of our improvements are but temporizings, and, instead of curing, soon add to the extent of the evil.

In concluding these remarks, we would strongly urge all who dwell where sewers are being constructed, to see that the cesspools are properly emptied and filled up (not merely covered over), and that communications be made with the drain.

It would be a useful guide to those in search of a house if the landlord were asked to produce a certificate that the drainage had been properly attended to, for it is most difficult to know, until after a short residence, whether the drainage is perfect or not; or, if there be one of the disguised cesspools, to which we have before directed attention, and which have been attended with such serious effects. We know of a case, where, soon after taking possession of a fresh house, a strong healthy young man was stricken with fever and died. This led to inquiry, and a cesspool, to which three other houses communicated, was found in the house with a rotten drain; and underneath the floor of the passage lay putrid water in large quantities. Then the workmen were sent for, the road opened to the inconveniences of passengers, and the filth removed in the hot weather; and now some of the other members of the family are ill of fever.

Strange that, notwithstanding our repeated statements and incontrovertible evidence, thousands, not without education, are still to be found who doubt, or at any rate deny, the injurious effects on health of defective sanitary arrangements.

In connection with the nuisances at Belle Isle, near the New Cattle Market, a crowded and influential meeting of the inhabitants was held at the Offord Arms, Caledonian-road, on Monday, when a carefully drawn up report of the "Beautiful Island" was submitted. After mentioning that the district complained of is only of small extent, occupying, in fact, not much more than seven or eight acres, and that it is without drainage in most parts, the report proceeded to describe the various manufactories, &c. which are here collected together; amongst them are pig-dealers, pig-killers, pig-feeders, "one knacker's (very clean), the rear of the premises suspicious;" "two knackers' premises very dirty," sausage-skin maker, oil and varnish manufactories, "the patent sundries process manufactory," baked "night-soil manufactory," patent manure manufactory, baked manure, melters, soap-boilers, lucifer-match manufactory, &c. &c. &c. From these numerous works—each useful in its way, but sadly out of place—fumes are passed by the south-west winds, amongst a population of from 60,000 to 100,000 persons. Twenty medical men have given their opinion of the danger of the gases which are thrown from this pestilent place; landlords complain of the difficulty they meet with in letting houses—some, in fact, having lost their best tenants: a mass of letters, too numerous to be read to the meeting, from people of all classes, complaining of the nuisance, lay upon the table. After a short discussion the report was adopted, and a committee formed to proceed at once against the various matters complained of. This determination will give us an early opportunity of testing the working of Sir Benjamin Hall's Bill; and we hope that the committee will deal with success and vigour with this place of pestilence.

We do not attempt to individualise any of the manufactories, but an idea of the effect of the whole may be gained from one example. A medical gentleman says:—"I have many a time passed in my carriage: the effect of some of the gases is to produce asphyxia. I have shut the windows to endeavour to get a little relief, but have been glad to open them in order to be able to breathe. It affects persons according to their different constitutions: in some it causes violent headache and oppression; in others nausea; in many downright sickness, &c."

If the air from Belle Isle thus affects the strong and healthy, it is evident how great must be the evil to the very young and to the old, and to those in delicate health.

In Clayton-street, Caledonian-road, diarrhœa has been prevalent, and many of the cases dangerous and bordering on cholera. These cases have occurred when the wind blows from the south-west. Many persons say that the smell can be distinctly "felt" beyond the High-street, Islington.

We have received some letters on the subject, and print a portion of one of them:—

"From inquiry made by me, I find that the trade which has sprung up of late is that of manure manufacturing from blood and bones, decomposed by oxalic acid, and baked into cakes. The effluvia from this reaches to a distance of two miles all round, and is at times, to those living in the direction of the wind, most hurtful, causing sickness and head-ache, with loss of appetite. The stench is observable, according as the wind blows, at King's-cross, Camden square and villas, Holloway-road, Barnsbury-park, and Pentonville-hill.

Several medical men attended the meeting, and complained of its effects. One of them who lives in Thornhill-square stated he must leave unless the nuisance was removed.

Now, I ask, is it not a most disgraceful thing that such a nuisance as this should have been allowed to grow up in the parish of Islington, and no notice taken of it by the trustees, but the inhabitants allowed to be annoyed and inconvenienced, and their health endangered, and compelled for their protection to call a public meeting, when the trustees under their Act of Parliament have full power to remedy it?

To administer this Act there are sixty trustees, two solicitors, who act respectively as vestry clerk and clerk to the trustees, and a surveyor and an assistant surveyor, and an inspector of nuisances.

With such an Act of Parliament and such a numerous body of trustees and others, persons would naturally conclude that the parish of Islington is well managed, paved, cleansed, watered, and free from all nuisances and annoyances; but let any one look at the neighbourhood of Belle Isle, and they will there see a district that would disgrace any parish not having the good fortune to possess so useful an Act,—streets and lanes without roads or pavements, receptacles of all kinds of filth rotting and putrifying, without drains—a pestilence to the neighbourhood, and productive of the most baneful consequences to the health of the inhabitants.—C. J. Fache."

ON THE PROGRESSIVE CHANGES IN ORNAMENT,

IN THE SUCCESSIVE STYLES OF MEDIÆVAL ARCHITECTURE.*

However degraded taste may now be, in many respects, we may still, happily, claim the love of nature as one of the characteristics of our day. How many a vile building, which would of itself be a perfect plague-spot on the landscape, do we see rendered endurable by the taste shown in laying out the gardens around it. The love of trees, shrubs, and flowers is, indeed, the most hopeful feature in the taste of our age, and one which may fairly cover a multitude of sins. Let us import this one hopeful symptom into our architecture. Let our love of nature show itself in our decorative arts. If we do this, we know that we shall not go far wrong. The same power which endowed us with the love of beauty and with a certain subordinate power of creating it, and supplied us with an infinity of materials in which to exercise this faculty, has not left us without models for its guidance. The direction given for the first structure for divine worship was, "*See that thou make all things according to the pattern shewed thee in the mount:*" and *we*, happily, have on every mount and in every valley patterns given us by the same authority as our perpetual guides. We are not, it is true, strictly bound to them, and we have powers of invention which enable us, often wisely, to vary from our models so as to suit our decorations to the functions they have to perform; but this does not affect the great normal fact that *nature alone* is the great primary guide to decoration, and that at those periods, which will ever be recurring when humanly-invented styles become enervated and fall to decay (and it is evident, to all who think deeply, and observe clearly, that we are living at such a period), the only hope for a revival of energy is by falling implicitly back upon *nature*, and by faithfully and lovingly following her guidance, to throw off the worn-out arts which are vernacular among us, and to generate others more worthy of a rational and cultivated age.

This, I think, we might all make a *simultaneous* effort to attain. We have no Freemasonry to enable us all at once to press onward in one architectural style; but so far as architectural *decoration* is concerned, we have that freemasonry, and its one password should be "*nature*."

I am not, let it be understood, expressing any disapproval of what is called conventional ornament. So far from this, I have the greatest admiration for that of both the early and late period of Gothic architecture; but the artists of those vigorous periods used *their own* conventionalisms—forms which had spontaneously grown with their own growth, or had been intelligently introduced by themselves for specific purposes of their own. What I argue against is the revival of these ready-made conventionalisms. We probably *need* conventionalism, but let it be *our own*; or, if the old results are to be adhered to, let us, to say the least, work out the problems afresh for ourselves. In applying the only types we can in reason fall back upon,—those supplied by nature,—to the particular purposes for which we want them, we shall find that nature has only supplied the *normal types*, but that it is for us to use and adapt them. This adaptation will force us to conventionalize; but we must never do this otherwise than to answer some reasonable use, and to satisfy some intelligible requirement. When we practically find the necessity of such adaptations, it is then that a reference to old conventionalisms will become useful: we shall then understand their purpose, and (without copying them) we shall receive from them hints of the most useful and practical kind.

Thus, we must learn, by our own study, to arrange foliage in the most effective manner, according to its particular purpose: we must (as Mr. Ruskin says) "bring it into service." In this we shall receive many useful hints from the *early* conventional foliage. Again, in the more essentially architectural features, such as capitals, we must learn so to dispose our foliage as to produce an elegant and strictly architectural outline. The most perfect among the many kinds of outline which may be used is that natural curve such as would be suggested by a jet of water curling over elegantly at the top, like the crest of a wave. This exact outline is assumed by many plants, and it was this habit in the acanthus-leaf which recommended them to the Greek and Roman artists as the most appropriate for their capitals. This outline we have in perfection in the early capitals of the thirteenth century, during the conventional period, and from them we may derive important aid in the distribution of our *natural* foliage, so as to produce the same outline. Again, the majority of the leaves we use as models have not that depth of light and shade produced by relief of surface, which we may need to render our foliage effective at a distance. Here we must use our own judgment, aided by hints from old works, in remedying this want, or we may bring to our aid leaves not used in old times, and which afford greater relief than those more commonly in use.

Then, again, at great distances from the eye it may not be necessary to make a perfect representation of a natural leaf: indeed, a perfect copy might fail in conveying a proper resemblance: we must, therefore, learn how to use such a bold treatment, as, by a few judicious and well-placed cuts, to produce the effect desired when seen from a distance,—so that it may, when *in its place*, really appear more like the true leaf than if it had been actually a perfect representation of it. This we may be helped in doing by the study of the *later* conventional foliage, in which the art of producing effect by simple mechanical means often shows itself in great perfection.

The same may be said of adapting foliage to the requirements of wood carving. I think a system might be developed of uniting the sharp effective cutting, so frequent in late Gothic foliage, with the use of natural leaves. I would

* See p. 353, *ante*.

never adopt (except in old buildings) the conventional *forms* of the fifteenth century woodwork, but I would adopt their conventional *method*, uniting it with natural forms: by this we might produce a system of wood carving perfectly suited to the material. The question of whether or not it is according to the rules of sound taste to conventionalize animals used in decoration is a difficult subject. No one, however, can do it so as to be tolerable but a first-rate artist. We often find heraldic animals drawn with wonderful skill, though by no means like nature. Those, for instance, in the enamelled shields, on the monument of Edward III. are inimitably drawn. Heraldry being, from beginning to end, a conventional art, and being one which has come down to us without having ever become obsolete, I would continue to treat it conventionally; and whenever purely heraldic animals are brought in architecturally, I would retain their heraldic treatment. I think, too, when we introduce animals to do such unnatural duty as acting as water-spouts, we may also fairly follow up the liberty we are taking with them; but, if we use conventional or grotesque animals at all, let us at least import into them so much good anatomy as to make it appear possible that such creatures might exist! Let us, however, usually show them as they really are; and, for this reason, I would recommend our carvers to draw occasionally at the Zoological-gardens, or even from our domestic animals. Another thing I would advocate is the enlargement of our range in the selection of natural types.

I think that we shall always render our carving more pleasing by adhering, *in the main*, to the indigenous productions of the country in which we are at work; and I would advise it as a general rule that the carver should, wherever he is engaged, study carefully the prevailing productions of that country, and derive from them the principal objects which he uses. By doing this, he will be able to introduce great variety into his work, and to bring in many plants not used in ancient work. This is the true principle to go upon, and I would consider it as the established *rule*. I would, however, admit, and even encourage exceptions. The cultivation of an infinity of beautiful exotics is perhaps one of the most remarkable characteristics of our age, and I would admit its claim to be represented in our architecture. I would, however, treat it as an exception in its use in decoration, as it is *in fact*. I would not use it in a country village where no floricultural luxuries are to be found: *there*, I would use the simple productions of the neighbourhood; but in the mansion of a person who delights in such pursuits, or in a church built near his gardens, or under his influence, nothing could be more appropriate than to admit the influence of such taste or proximity into the architectural decorations.

If I am right in urging the general relinquishment of bygone conventionalism, and the falling back upon nature as the great characteristic we should aim at impressing upon all the decorative arts of our day, how important does it become that our art-workmen should make themselves thoroughly acquainted with natural productions! Let me, then, urge upon them the constant and careful study of the types with which they are on all hands surrounded. It is now the very height of the season for this study: do not let it slip by you. Remember that for nearly seven long months you can scarcely find a leaf when you want it; study them, then, while you have got them. Give yourselves an occasional holiday expressly for this purpose, and go out with your sketch book and your modelling clay, and sketch either on paper or in relief, or both, the leaves *as you see them* growing. Study the *habits* of the plants—the different modes in which their leaves and flowers group themselves. These you will often find to give you naturally just those symmetrical arrangements which you so often need: study even what animals, as *birds*, caterpillars, or butterflies, most frequent each plant: for their occasional introduction is true to nature, and gives life and spirit to your productions; but above all, train your hand and eye to the drawing and modelling of them freely. You may know all about them as a naturalist, without being able to produce a representation of them when wanted. You will gain more by this than by taking casts of them, though that is important. Dried leaves will be useful *if you have sketched them while living*, but if not, they will be of little service. But, whatever mechanical means you may use, pray in some way or another take the matter energetically in hand. And while architects and amateurs are quarrelling about whether the round arch, the pointed arch, or the horizontal architectrave is to be our future type of construction, and whether the architecture of the future is most to resemble that of Greece and Rome, or that of our own northern lands, *you*, as *decorative* artists, will have settled that part of the question which belongs to you, by boldly, and with one heart and soul, falling back upon that one great and glorious Freemasonry which belongs alike to every country and every age, and whose only rule of art is the study of *nature*.

G. G. Scott.

STATUES AT LARGE.

Peel.—We have not seen any objections in print to the City statue of Sir Robert Peel, by Mr. Behnes, which has been erected between St. Paul's and the Post-office, and so we ought to conclude perhaps that all are tolerably well satisfied with it, and that we ought to be so too. Truth to say, however, it gives us very little pleasure: we ought to say, it gives us a great deal of pain,—to see so much good metal wasted. The statue has not a thought in it or about it—to say nothing of the way in which the head is set on the neck,—and with its "that-will-do" sort of pedestal (equally guiltless of a thought), and the two beggarly double lamps at the sides, is as sad a specimen of an abortive attempt to be tasty as we can show in this metropolis of artistic failures.

The Houses of Parliament.—The marble statue of Walpole has been placed upon its pedestal in St. Stephen's Gallery, leading from Westminster Hall to the entrance of the Houses of Lords and Commons. The work is from the chisel of Mr. John Bell. It is to be hoped that these statues are not being produced too fast,—as per order.

THE "SQUARES" OF LONDON.

The interest which we usually feel in regard to the scenes of our childhood will, I trust, be sufficient excuse for a few remarks which I wish to make on your article on the "Squares" of London. I was born, and passed the first forty years of my life, in that district, and can, from my own knowledge, make some slight remarks on your statements. You give the date of Russell-square about 1804. I am certain the enclosure was commenced *not later* than 1802. The ground where the north side of the enclosure stands was about eight or ten feet below the present level, and the coping was placed on a series of brick piers and arches, which, being erected in the open field, without apparent connection with any other object, puzzled me exceedingly. The ground was subsequently raised, and the surrounding houses erected. Bedford House and premises, occupying the north side of Bloomsbury-square, with a dead wall and gates, with sphinxes on the piers, extended northward to the line of houses forming the south side of Russell-square, where a "ha-ha" formed the boundary, enclosing the stables and yard. The garden was nearer the house, and not on the site of Russell-square. Bedford House stood across the present Woburn-place, and I have a perfect remembrance of seeing the cartoons at the time of the sale. At that time Bolton House, which occupied the north extremity of the single line of houses forming Southampton-row, was the extreme of London in that direction, for there was no building in the then clear open "Long-fields" between Bolton House and the Southampton Arms Tea-garden at Camden-town, to which there was a footpath crossing the New-road, leaving the "Boot," immortalised by Dickens in "Barnaby Rudge," at some distance on the right. The view northwards from Queen-square was then quite uninterrupted, as stated by Dodsley. I remember with pleasure the many a roll on the grass which I have had, where there is now an entire town, of which I believe the first house was built by Mr. Burton for his own residence. Near about the spot occupied by Gordon-square, a circular enclosure was constructed, I think about the year 1803, for the exhibition of the "first locomotive," the production of Trevithick. I remember listening with wonder to the description of its performance, which was *then* so satisfactory that a bet was offered by the proprietors to match the engine to run a greater number of miles in twenty-four hours than any horse that could be produced, but there were no takers.

The boundary between St. Pancras and St. George's, Bloomsbury, parishes runs east and west, about half way between Russell and Tavistock squares. I have heard it stated that the boundary was formerly more to the south; but on the occasion of an unknown man being found dead in the fields, the authorities of St. Pancras refused to bury him, on the plea that he did not die in their parish; but the authorities of St. George's, then St. Giles-in-the-fields, out of which it was taken, buried the man without hesitation, and placed the boundary mark where he lay, thus adding a space now occupied by important houses.

The statue of Francis, Duke of Bedford, in Russell-square, was erected by subscription, which so far exceeded the requisite sum, that the surplus sufficed to procure the sitting figure of his friend Charles James Fox, which faces the former, in Bloomsbury-square.

Bedford-square dates somewhat further back than you state. I have known it in precisely its present condition nearly sixty years. I passed daily to school in the year 1799, and from circumstances I have heard my father relate, I know the erection must have been about 1780. The centre house on the east side used to be the official residence of the Lord Chancellor. Lord Loughborough lived there, and at the time of the Corn-law riots it was occupied by Lord Eldon. The mob made an attack on the house at night, and I remember on the following morning seeing the whole of the pallisading lying down in the area, the stone coping having been driven in with a pavior's rammer. Lord and Lady Eldon escaped over the back wall into the British Museum Gardens, and took refuge in the guard-house.

J. J.

Only one half of Russell-square, I think, formed the gardens of Bedford House, for there was a footpath leading from Southampton-row, at the back of the gardens of Bedford House and the British Museum, to the north-east corner of Bedford-square, which I have often traversed in my boyhood,—half of the site of Russell-square being a field, on my right, and the gardens of Bedford House and the Museum on my left. In the gardens of Bedford House, enclosed by park paling and a row of trees from Southampton-row, I have seen the Bloomsbury and Inns of Court (called the B. I. C. A.) Association, or Volunteer Corps, exercising before they were accustomed to assemble at the Foundling Hospital.

Bedford-square was built, your authorities say, between 1800 and 1806. Now on reference to Horwood's Map of London, published in 1799, you will find this square and the surrounding streets completely laid down and numbered, and I remember it completely finished at a date anterior to that. I believe several houses about there were built by Sir William Chambers: they bear marks of his hand.

I have no doubt Dodsley was right as to Queen-square, and that the north side was left open for a view of Hampstead and Highgate. I remember the beautiful view when there was not a house to intercept the prospect of these lofty districts, and have not seldom stood in Queen-square to admire them. The garden at the north end of the square was at that time sunk some ten feet below the square, agreeing with Malcolm's observation. In the original* construction of the Foundling Hospital, the grounds extended southward in the convex considerably, viz. eighty feet more than they do now, as shown by a map in my possession, dated 1790, and another dated 1769, and in which

* This must have been an after arrangement, for in a map I have since referred to, dated 1745, the grounds are shown straight with present line, with fastions at the four corners.

is shown the pathway*. Malcolm refers to, which in the plan of 1790 is marked "footpath from Tottenham Court-road to Lamb's Conduit-place," with a "sewer" by its side. With respect to your note on Hanway and umbrellas, I may, *en passant*, add that I have heard a lady say, in reference to their introduction in her early days, that on carrying one, she was accosted by a hackney coachman with "Pray, ma'am, do put down that thing, you'll frighten my horses."

Old Subscriber.

PROVINCIAL NEWS.

Fakenham. — Last year a company was organised for the erection of a building to include a corn hall, assembly room, magistrates' room, reading room, and other accommodations. Shares of 25*l.* each were taken by 160 subscribers, thus raising a capital of 4,000*l.* Sir Willoughby Jones gave a site in the centre of the town. Mr. Brown, of Norwich, architect, supplied a design which was approved by the committee; and Mr. Pettit, of Ipswich, obtained the contract, the amount being rather more than 3,000*l.* Mr. J. Pilkington, of London, supplied the asphalte, &c. for the roof, and Mr. Land, of Norwich, the gas fittings. The building was finished during the present month, and it is of red brick, externally nearly of a square form. The amount of the contract did not admit of so much stone-work as was arranged in the original design, and consequently, according to the *Norfolk Chronicle*, the building presents rather a heavy appearance. It consists of the corn-hall, 85 feet in length, 35 in width, and 26 in height. It is lighted by nine windows round, and a dome light in the centre. The dome comprises eighteen main compartments, with moulded wrought-iron ribs, and these compartments are sub-divided by lighter moulded bars glazed with Hartley's opaque glass, in five squares deep. The dome is ventilated. The interior of the corn-hall is ornamented by a cornice, and the finishings of the windows and scantlings are of Persian cement, in imitation of marble. The east side of the corn-hall opens into the assembly-room, the height of which is much lower. The dimensions of this room are 48 feet in length and 27 in width. There is a stone staircase to the rooms above, the magistrates' room, and the reading-room. Both are spacious, it is said, but deficient in height.

Stalham.—Here also a corn-hall and reading-room, &c. have been erected. About eighty-two gentlemen took as many shares at 5*l.* each to raise a sufficient sum. A committee was appointed and advertisements were published for tenders for the erection of a building. A site was purchased for 40*l.* and the tender of Mr. Pestell was accepted, to erect a brick structure, including vaults, a corn-hall, and reading-room, &c. for 333*l.* The building has been completed. The corn-hall is adapted for meetings or concerts, as well as business purposes. On Tuesday in last week, the opening was celebrated by a dinner held in the hall.

West Ham.—The enlargement of the gas works here is progressing towards completion.

Tewkesbury.—The Abbey Gate House, Tewkesbury, which a short time since was much dilapidated, has, within the last six years, been almost restored to its original state, by the present owner, Mr. John Martin, M.P. The gateway leads to the Abbey House, the residence of Miss Terrett. A view of this gateway will be found in our 8th vol. p. 114. It was partially restored by Mr. Martin in 1849, at a cost of nearly 450*l.* under the direction of Mr. Medland, of Gloucester, architect. A considerable portion of the walls was taken down and rebuilt, the stones being replaced precisely in their former position, and the whole of the stonework repaired. The gateway has been roofed with wrought timbers in panels, with curved and moulded brackets, supported by stone corbels with carved heads, and shields bearing appropriate devices. It has been further improved, according to the *Gloucester Chronicle*, by the addition of a set of doors, consisting of a large pair of folding-doors and a small side door, which have just been completed by Mr. Joseph Knight, of Gloucester. The large doors are 15 feet in height and 12 feet across, and weigh about half a ton each: the hinges were made at Mr. Savory's foundry. The doors, which are of oak, were designed by Mr. Medland, and are intended to accord with the style of the structure and the date of its execution.

Bath.—The Bath Board of Guardians lately received a report from the committee appointed to examine the tenders for the erection of the proposed lunatic asylum. There were twenty-five tenders, very few for the whole work, and these much higher than the contracts for separate portions. The committee recommended the following:—Mr. Hill, masonry, 1,067*l.*; Mr. Hodges, carpenter, 995*l.*; Mr. Mansfield, plasterer, 387*l.* 10s.; Mr. Kerslake, plumber, 287*l.*; Mr. Tuck, smith's work, 77*l.*; Mr. Axford, painting and glazing, 60*l.*; and estimate for raising the walls through to the roof, and other work as a protection against fire, 30*l.*; making a total of 2,903*l.* 10s. The architect's rough estimate was 2,530*l.* The contemplated outlay stands thus:—Building, 2,903*l.* 10s.; architect's commission, 150*l.*; furniture, &c. 300*l.*; purchase of land, 420*l.*; making 3,773*l.* 10s. The recommendations of the committee were unanimously adopted.

Taunton.—Tuesday in last week was a great day here, the foundation-stone of the new Assize-Hall having been laid with due ceremonial, and amid a display of banners and other decorations, and with music, feasting, and other observances. The site of the new building is at "the Grove," on the south side of Shutters, and opposite Wilton Jail. The Hall will be erected in the Perpendicular style of architecture. The materials of the exterior walls are to be Devonshire marble, and Combe-down stone dressings. The length of the building is about 200 feet; 140 feet in depth, and about 100 feet in height to the pinnacle of the ventilation turret, over the grand entrance to the courts at the south-eastern front. Over this portico a bay window from the grand jury room will communicate with a balcony. The edifice will stand back 100 feet from the road, be enclosed with iron gates and palisades, and will be approached by carriage drives leading to the principal entrances. The estimated cost of the building, exclusive of the land and approaches, is about 20,000*l.* The architect is Mr. Moffatt; the builder, Mr. George Pollard, of Taunton; clerk of the works, Mr. Thomas Jewell; Mr. Richard Carver, the county surveyor, being entrusted with the superintendence of the whole, under the direction of the building committee of magistrates, of which Mr. Richard King Meade King is chairman. On entering the grand portico leading to the courts, there is an entrance-hall on the ground-floor, 41 feet 6 inches by 30 feet. By a flight of stone steps the entire width of the hall, the inner entrance-hall is approached. This apartment, round which is a gallery, is 40 feet by 30 feet, and from this second hall the grand jury chamber (the size of, and extending over, the outer entrance-hall), lighted by a bay window over the portico; witnesses' waiting-rooms; magistrates' retiring-rooms; county treasurer's offices, and other suitable apartments are reached by a grand staircase. From the inner hall, on the right, is the entrance to the crown court, and that of the Nisi Prius on the left. Both courts, as well as the grand jury room will have open roof timbers of stained wood, moulded and carved. The courts are of equal size, 43 feet by 34 feet. On the basement story, immediately beneath the inner entrance-hall, a space will be occupied by heating apparatus for the building, which will be constructed by Messrs. Haden, of Trowbridge. On each side of the inner hall, leading down under the grand staircase to the basement floor, are robing and consulting rooms for counsel, and beyond these are apartments for the judges' associates, and clerk of the peace; also a fire-proof muniment-room for county records, and jury retiring-rooms. There will also be seven cells for prisoners, who will be brought from Wilton Jail by a passage under the road. The judges' lodgings occupy the west end of the main entrance, being at the south-west angle, with porch and turret over, and two oriel windows to the principal apartments. The basement is occupied by the servants' hall, kitchen, scullery, pantries, larders, beer and coal cellars, and the usual offices, &c. On the ground-floor is the porch and hall, leading to the principal staircase: the drawing-room on the right will be 26 feet by 18 feet; and on the left the dining-room, 36 feet by 25 feet; also breakfast-room, clerk's-room, &c. &c. The upper story contains numerous bed-rooms, bath and dressing-rooms, for the judges and their attendants.

Newcastle-upon-Tyne. —The foundation-stone of the St. Nicholas's-square Buildings will be laid on 29th instant, by the mayor.

Edinburgh.—It is proposed to light up the statue of the Scott Monument with gas, by suspending a lamp within the arch; and the matter has been remitted to a committee of the Council.

CHURCH-BUILDING NEWS.

Lincoln.—Workmen are busily engaged in erecting scaffolding for placing the new east window in the cathedral.

Norwich.—The corporation of this city have resolved to rescind their previous resolution to have two cemeteries, great difficulties having been met with by the burial-board in procuring two separate sites. It has therefore been resolved to have only one, the western, which, however, is to be thirty-five acres in extent. The committee have received tenders for building the chapels, lodges, and gates for the cemetery. The lowest tender was that of Messrs. Ling and Balls, being 1,855*l.* exclusive of 135*l.* for moulded bricks; total, 1,990*l.* This sum was 135*l.* more than the estimate of the surveyor, whose estimate only included one gate instead of two. The estimate of Messrs. Ling and Balls was accepted, and the city seal affixed.

Henfield.—The tower of the old church here has been put in a state of repair, and surmounted by a cock presented by the vicar. It is to be hoped that the reformation which has begun may extend to the interior, and that the Gothic arches may not be much longer disgraced with an elaborate coat of whitewash.

Dorchester.—At a recent meeting of the local Burial Board the contracts for the cemetery works were opened, and that of Mr. Mondey accepted. Operations have been commenced, workmen being employed in inclosing the ground, which lies on the Weymouth-road, a short distance beyond the railway station. It is easily accessible from the town, and when the mortuary chapels are constructed, and the grounds laid out, it will be an attractive spot.

West Charlton.—The reopening of the parish church of St. Mary, West Charlton, Somerset, took place on Wednesday before last. Previous to his decease, the late Archdeacon Brymer had intended to carry out certain repairs and restorations in this church; and these have now been completed on a more extensive scale, at the sole cost of his two brothers. New roofs of English oak, corresponding in date with the respective parts of the building, have been placed on the nave and the north and south transepts. The whole of the church has been fitted with open seats of same material. The floor of the chancel has been laid with encaustic tiles. The reredos is of Caen stone, with columns of serpentine marble. New brass communion-rails have been furnished by Messrs. Potter and Co. of London. Three painted windows, by Bell, of Bristol, representing the birth, death, burial, and resurrection of our Lord, have also been placed in the chancel. The south porch has been rebuilt. Other repairs and minor restorations have been made; and the whole has involved an expenditure of about 2,000*l.* The plans and designs were supplied by Mr. C. E. Giles, of Taunton, architect. A new organ, by Sweetland, of Bath, the separate gift of Mr. James Brymer, has likewise been erected.

Aldmondsbury.—The site of St. Peter's Church, Cross-keys, consecrated on 8th instant, was given by Col. Master, of Knole-park, and the cost of the building was defrayed by the Rev. Henry and Lady Emilie Gray, with the assistance of friends, aided by a grant from the Diocesan Church Building Society. The roofing is timbered and open, and the walls are decorated, or rather illuminated, with numerous texts of Scripture in black and red letters; and above the archway leading to the communion is a single Latin cross, painted in red beneath a

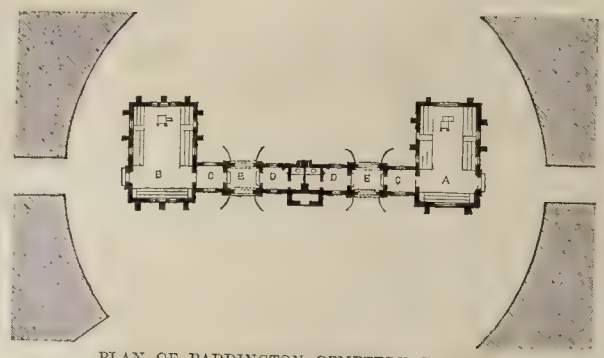
* Doubtless a continuation of the footpath I have before referred to.

scroll text of Scripture. All the seats are open and all free. The east window, painted by O'Connor, is composed of three lights, the centre one setting forth our Lord crucified, and on either side St. Luke and St. Matthew. A window in the south wall of the chancel was painted and presented by the Rev. Mr. Hilton, lately curate of Lower Easton.

Swansea.—A social gathering was got up at Sketty, on Monday and Tuesday before last, by the clergy combinedly, on behalf of a new church which is intended to be built for the accommodation of part of the Welsh population of this parish. It is said to be the intention of the vicar of Swansea to erect this church specially for the Welsh population between Sketty and the Carmarthen road, and on a piece of ground given by Mr. J. D. Llewelyn, of Penllergare. It is proposed that the church shall contain 300 sittings, and become a chapel-of-ease to the mother church of St. Mary. The fabric is expected to cost from 1,000*l.* to 1,200*l.* The architect is Mr. R. Kyrke Penson.

Barlestone.—On Wednesday before last, the village church here, according to the *Leicestershire Advertiser*, was reopened, after having been rebuilt, with the exception of the chancel (which has been repaired), and at a cost of upwards of 1,200*l.* The edifice is of granite, covered in with Staffordshire tiles, and is of the Early English style of architecture, from a design by Mr. Ferrey. On the south-west side there is a porch of oak on a basis of stone. The church was built by Messrs. J. and G. Lilley, of Measham, and Mr. Elliott, of Ashby. The pulpit and font are in carved Ancaster stone, and provision is made for 140 free, and 130 private, sittings or open seats, besides room for 90 school children. There are a nave and two side aisles, having pillars and arches of dressed stone, and a small gallery at the west end. The whole cost has been defrayed principally by subscriptions from the parishioners.

York.—The Dean and Chapter have just had repaired the old stained glass windows which adorned the six sides of the Chapter-house of the cathedral. By means of the scraps of ancient stained glass found in the store-house of the cathedral, Mr. Noton has filled up each chasm with strict regard, it is said, to the original design of the windows. Means have been taken for cleansing and preserving them. Mr. Noton has also been instructed to repair the windows in the vestibule, connecting the north transept with the Chapter-house. These windows contain some of the earliest glass in the cathedral, but they are now greatly dilapidated.



Seaham.—On Monday before last the Marchioness of Londonderry laid the foundation-stone of a new church at Seaham Colliery. The new church, which, according to the *Gateshead Observer*, is designed by her ladyship to be a memorial to the late marquis, is to be in the Early English style, with decorated windows. It will have a nave, chancel, and side aisle. The seats will be open and free for between 400 and 500 people. The architect is Mr. P. C. Hardwick. Mr. R. Robson, of Durham, is the contractor.

Gateshead.—The Wesleyan New Connection are about to erect a new chapel, on Mount Pleasant, Gateshead, from designs by Mr. M. Thompson, architect. The style is Decorated. The chapel will have an open timbered roof, and stained-glass windows. Mr. Edward Bruce, of Gateshead, is the builder.——On Monday before last, the foundation-stone of a new Wesleyan chapel was laid at the Teams, near Gateshead.

Wigton.—The new cemetery at Wigton has been opened. The chapels and other works are now finished, excepting a portion of the walk and the palisades at the entrance.

Shepton Mallet.—The inhabitants of this town have determined to borrow 2,500*l.* for the purpose of forming a public cemetery.

Fire at Messrs. Donkin's Engineering Works.—A serious fire occurred in the night of Wednesday last, on the premises occupied by Messrs. Bryan Donkin, and Co. in the Blue Anchor-road, Bermondsey. The origin of the fire is unknown.

PLAN OF PADDINGTON CEMETERY CHAPELS.

COMMISSION OF INQUIRY INTO ERECTION OF IRISH LUNATIC ASYLUMS.

A measure was passed through Parliament during the last session, and was one of the last to receive the royal assent, to enable the Government to recover from the several Irish counties certain moneys which had been irregularly advanced for some of the lunatic asylums recently erected. Owing, however, to remonstrances made to the Chancellor of the Exchequer, that the outlay had been extravagant in some cases, and the work very imperfectly executed, the Lords of the Treasury have appointed an architect, Professor Donaldson, and a medical officer, Mr. James Wilkes, of the County Lunatic Asylum, Stafford, commissioners, for the purpose of inquiry into the matter, with Mr. Spencer Shelley, of the Treasury, as secretary, to inspect the following asylums,—Richmond (Dublin), Mullingar, Belfast, Londonderry, Omagh, Sligo, Ballinasloe, Limerick, Kilkenny, Clonmel, Cork, and Killarney. They are empowered to call for all necessary evidence and papers, and to take *viva voce* evidence, and proceed to Dublin on the 25th of this month, when their first court will be held at the castle.

After an inspection of the several asylums, and their inquiries on the spot, they will have to report the result to Government.

DECORATION OF BIRMINGHAM TOWNHALL.

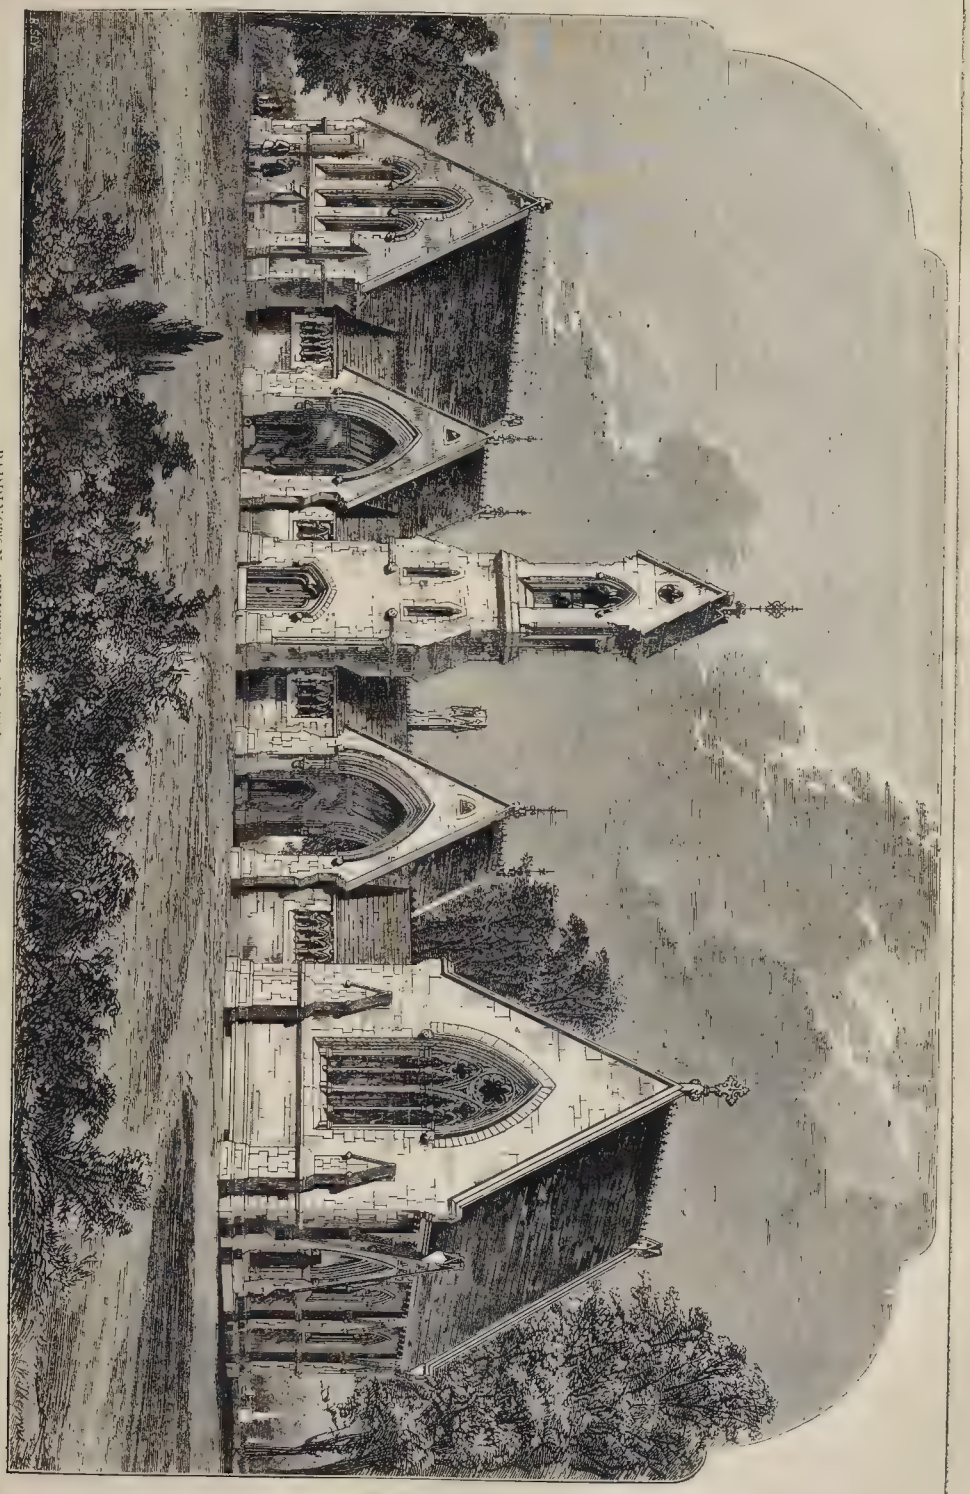
The decorations of the Birmingham Townhall are approaching completion. The building is to be used for the approaching musical festival. The work was undertaken by Mr. Ingram for the sum of 2,000*l.* The lighting and ventilation are in the hands of Messrs. Winfield, and will cost 500*l.* more. *Arris's Gazette* gives the following particulars:—"The ceiling is a mixture of Roman and Italian ornaments. The mouldings are of a Greek character, especially in their arrangement. The rosettes are strictly Roman. The ceiling is composed of three circles, each divided into four portions, separated by tapering ribs, on which are painted Arabesques in the manner of Raffaelle, with musical trophies, vases of flowers, and other ornaments introduced. Each compartment is again divided into nine coffers or sunk panels; the extreme depth of these being painted in rich crimson, with a gold radiating star. The framework of each compartment is a maize colour, with Roman ornaments in soft carmine. The junction of the rib of each circle is a Roman rosette of white and gold, with a rich orange centre upon a blue ground. The first coffer is painted a deeper maize than the framework, with a terra-cotta ornament. The next receding coffer is of blue and gold, and the extreme depth of crimson and gold. In all there are thirty-six coffers in each circle, forming a splendid enrichment for the centre, which consists of a sun-light composed of 430 burners. Of these there are three in the ceiling. The framework of the ceiling is richly decorated with large rosettes, of singular beauty, especially as regards their execution. These are emblazoned with a profusion of gold, and relieved with glowing colours. The cornice is white: the cantilevers and the mouldings are etched with gold; but the peculiar character of the treatment is that every portion is distinct. On the frieze around the building is painted the honeysuckle ornament from the temple of Jupiter Stator. The walls are Sienna marble. The pilasters are highly polished, resembling enamel. The capitals are gilded. The basement of the building is of that peculiar grey tint which brings it in relief to the richer hues of the remainder of the decorations. The front of the gallery is bronze and gold. The decorations of the organ correspond with those of the building. The framework, excepting the base, is gilded: the pipes are of a rich cobalt blue, diapered with gold, and the whole presents a mixture of the Greek and Italian styles.

PADDINGTON CEMETERY, WILLESDEN LANE-ROAD.

This Cemetery, formed under the direction of the Burial Board of the Parish of Paddington, was consecrated on the 31st ult. by the Lord Bishop of London, attended by the Rev. A. M. Campbell, the rector of Paddington, the clergy of the parochial districts, and the members of the Board, with the usual ceremonies.

The cemetery contains twenty-five acres of land, situated on the road leading from Kilburn to Willesden, lying on a hillside sloping to the south. Two-thirds of the land have been appropriated to the Church of England, but the whole has been laid out on symmetrical plan, the roads and paths intersecting each other at right angles, or radiating from a common centre, intersecting concentric circles.

The chapels, for the Church of England and for the Dissenters, form an architectural group nearly in the centre of the ground. They are connected by means of porches, covered gateways, and robing-rooms, attached to each chapel, and constitute a range of building 144 feet in extent. This arrangement is to obviate the unsatisfactory and diminutive appearance which small detached chapels in large open spaces always present. In the centre is a belfry. Each chapel is about 40 feet long by 20 feet wide: the whole of these buildings is executed in Kentish rag and Bath stone. The style of the architecture is of the early geometric period.



Two lodges for the cemetery-keeper and sexton are erected at the entrance: the approach is by iron gates, in a circular sweep of the boundary wall.

The buildings and boundary wall have been executed by Mr. Batterbury, of Camden Town, and the drainage and roads by Mr. Campbell, of Hackney. The total amount of the contracts is 9,159*l.* Mr. Miller was clerk of works.

The ground has been laid out, and all the works to the chapels, lodges, &c. have been executed from the designs and under the superintendence of Mr. Thomas Little, of Northumberland-street.

PADDINGTON CEMETERY CHAPELS.—Mr. Thomas Little, Architect.

THE ARCHITECTURAL EXHIBITION.

It may be useful to mention that the Exhibition will be opened to the public, in Suffolk-street, on the 17th day of December next, and that all drawings, and other objects intended for the Exhibition, must be delivered at the Gallery on the 3rd and 4th of December. Two rooms, as before, will be set apart for manufactures, patents, and similar matters, bearing directly upon architecture.

In a report which the committee have issued, it is shown that, although in addition to the regular subscriptions, the sum of 38*l.* 14*s.* 6*d.* was specially subscribed towards extraordinary expenses, the committee still owe the treasurer about 65*l.*

The profession at large have much to do before the Exhibition is advanced to a proper status: the committee will carefully administer the means put at their disposal, so as to produce the best result attainable—as far as they are concerned. The real success of the Exhibition, however, depends more on the exertion of the architects of England, who must, to insure this, cover the walls with drawings. If the members of the profession will exert themselves worthily in the preparation and exhibition of drawings, the committee have no fear as to certain success, both in a pecuniary and artistic point of view; but without this they feel that it is impossible to achieve it in either.

After much consideration, the committee have determined this year not to *admit any drawing before exhibited* in London; and we think they are right.

A COTTAGER'S ROOM.

It is pleasant to observe the charming effect which it is often in the power of a poor labourer to give to his cottage, by making some of the most simple productions of nature subservient to the decoration of his home. That home may be small, and yet the source of great comfort and refinement to him, who, following the inclination of his taste for beauty, and being an unsophisticated lover of Nature, culls here and there, as often as the blessed opportunity offers, from the immense variety of the vegetable kingdom,—

> "Seeks for the beautiful in cozy caves,
> In rocks, uncovered by receding waves,
> Where the sea-weed grows;"

and, after a healthy ramble, and the enjoyment of that peacefulness which the tumult of a crowded city or toil forbids, he has something that rewards his search, that gratifies his eye, and reminds him of well-spent time and past pleasures. We have seen the walls and ceiling of a peasant's home thickly studded with shells of all kinds and colours, displayed in agreeable forms; and, in conjunction with flowers, dried plants, sea-weed, and mosses, the whole had a most delightful appearance. F. L.

PICTURES AMONGST THE LONDON POOR.

WILD-COURT.

I READ with very great pleasure your remarks in a recent paper on the improved condition of Wild-court, Drury-lane, and every one who understands the subject will feel thankful to those gentlemen who have conferred so great a benefit on a large body of the struggling classes, and set such an excellent example to others. While admitting generally the wisdom and utility of the regulations issued by the association which has so wonderfully changed Wild-court and other neighbourhoods, I must ask you to allow me the powerful aid of your journal in directing attention to one part of the regulations, which seems to me to require consideration, viz. that which says "no papers shall be stuck upon the walls, or nails driven in." You have, Sir, yourself noticed, and it cannot fail to cause a feeling of pleasure to most of those who have paid any attention to the dwellings of the London poor to note, a sort of natural love for art amongst the very poorest. In your "Shadows" you mention that however scanty the furniture may be, few of the poorest homes are without a humble gallery of art. This is so, and I have seldom seen, placed upon the walls of the worst classes, any print or picture of an immoral tendency,—the Queen and Prince Albert, passages from the life of Christ, the children of the royal family, and such like subjects, forming the chief. Thoughts of this inherent taste, however feebly developed, have often cheered me in places overwhelmed with misery and neglect. Pictures in these poor people's houses cannot possibly do any harm: on the contrary, they must do good to both the children and those of older growth; but how will they be able now, in Wild-court, to "hang" their little collections, when they are not allowed paste or a nail for that purpose? I would be the last to advise anything which might be likely to do serious damage to such property, but think, from my knowledge of the people, that a license as regards the arts will not be abused. We ought, in connection with the supply of dwellings to the industrious classes, to let them feel a certain amount of independence. They should pay a fair value for the accommodation supplied, and not be too much fettered with rules which might be liable to make them feel that they were there on sufferance or charity. AN ARTIST.

THE BIRMINGHAM AND MIDLAND INSTITUTE COMPETITION.

THIS institute has been empowered by Parliament to erect a building which shall combine three departments;—1st. A general one with museums, lecture theatre, large library, newsroom, and other subordinate accommodations; 2nd. An Industrial Department, with reading-room, library, and three class-rooms; and, 3rd. A Government School of Art, with modelling class-rooms, painting and drawing classes, and accommodation for the study of perspective, antique ornament, antique figure, and various other minor divisions. The committee called in the assistance of Professor Donaldson to advise them, and a minute paper of instructions was drawn up, and sent to several eminent professional men, inviting them to compete. On the 18th inst. sets of designs were received from Messrs. Hemming, Bateman, Yeoville, and Bland, architects, of Birmingham; from Mr. Bowman, of Manchester; and from Messrs. Gibson, Edward M. Barry, Edward I'Anson, Lockyer and Martineau, and Mr. James, of London. The series of drawings are now exhibiting in the High-school, and exciting great interest. Prince Albert has graciously consented to lay the first stone in November.

COMPETITIONS.

Atherton, Lancashire.—The burial-board have approved the plans of Mr. T. D. Barry for the cemetery chapels, lodge, &c. and the buildings are to be forthwith commenced.

Blandford Cemetery.—We have received a letter from Mr. Pinch, showing that his design *was* selected, and that he was so informed by the clerk of the board, and that the gentleman who is now pointed out as the successful competitor was employed by the board to make alterations in his, Mr. P.'s, design. Mr. Green, the architect in question, makes a directly contrary assertion, and we shall leave them to settle it between themselves. We are not disposed to go farther into the matter. The board appear to have exhibited great want of knowledge as to the position and duties of an architect.

THE ACT FOR LIMITED LIABILITY IN PARTNERSHIPS.

THIS Act, notwithstanding a formidable opposition on the part of the great commercial, trading, and capitalist interests, not only in the Commons, but also in the Lords, has been fairly passed, and is now the law of the land, a boon to the working and the middle classes, for which they are indebted to the steady determination of Lord Palmerston and his Government, who literally forced it through all its stages, in the face of all opposition, threatening to keep hon. members from their green fields and their "game" for a fabulous length of time if they did not swallow the dose. Doubtless, although the Act is not faultless, and various objections have already been made to some of its clauses and omissions, it is destined shortly to do much good, and at least it was designed to do so, especially to the working classes, for whose benefit it was, mainly, that such an Act was urged.

The capital of joint-stock companies under the new Act is to be divided into shares of a nominal value, not less than 10*l.* each. The following are the conditions, "in addition to doing all other matters and things now required," in order to obtain a certificate of complete registration:—

"1. The promoters shall state on their returns to the Office for Provisional Registration that such company is proposed to be formed with limited liability.

2. The word 'limited' shall be the last word of the name of the company.

3. The deed of settlement shall contain a statement to the effect that the company is formed with limited liability.

4. The deed of settlement shall be executed by shareholders, not less than twenty-five in number, holding shares to the amount in the aggregate of at least three-fourths of the nominal capital of the company, and there shall have been paid up by each of such shareholders on account of his shares not less than 20*l.* per centum.

5. The payment of the above per-centage shall be acknowledged in, or endorsed on, the deed of settlement, and the fact of the same having been *bonâ fide* so paid, shall be verified by a declaration of the promoters, or any two of them, made in pursuance of the Act made in the 6th year of the reign of his late Majesty King William IV. chap. 62."

The thirteenth clause provides that "whenever, on taking the yearly accounts of such company, or by any report of the auditors thereof, it appears that three-fourths of the subscribed capital stock of the company has been lost, or has become unavailable in the course of trade, from the insolvency of shareholders, or from any other cause, the trading and business of such company shall forthwith cease, or shall be carried on for the sole purpose of winding up its affairs."

It is also provided, of course, that "no shareholder shall be liable to pay, in satisfaction of any one or more execution, sequestration, or other process, a greater sum than shall be equal to the portion of his shares not paid up."

By this short, but important Act, then, free-trade in capital, as it has long existed and worked well in France, may be said to be at length fairly inaugurated in this free-trade country.

THE TOWER OF ST. MARY'S, TAUNTON.

THE condition of this fine tower continues to cause uneasiness. A certain amount of work has been done in the shape of one buttress (the north-west), and the architect (Mr. Giles), not feeling satisfied, wrote a letter on the 31st ultimo, in which he said:—

"I consider there will be great danger if the tower is left in its present condition for any length of time; indeed, it seems to me to be absolutely necessary that a final decision should now be made on the whole subject. If the parish should determine not to alter their last decision, viz.—to carry into effect certain repairs, according to my letter of advice of August 24th, 1854, with a view only to a very partial repair of the dangerous portions, I must beg to inform you that I have found it impossible, from the state of the tower, to confine the works to the limits proposed by the letter, and I must ask your further instructions."

A meeting of the parishioners was held on the 16th, when the discussion was somewhat stormy and unpleasant. It ended simply in a resolution, empowering the churchwardens to complete the buttress.

Mr. Giles said, in answer to questions, that he would not pledge himself that it could be proceeded with without danger. Mr. Scott had also strongly advised him not to go on with it. The danger arose from the disturbance of the tower caused by the operations of repairs. If the work were suspended altogether, the danger would not be greater, but it was now much more imminent than was generally imagined. The whole of the details were separating from one another, and it was impossible to bond them with iron work. There was no difficulty in the buttress itself, but in the quoin at the angle, where the danger was. There was a fissure extending half the height of the buttress, and he thought it possible to take that down to the bonding, but it turned out there was no bonding at all.

It seems very desirable that a more satisfactory understanding should be arrived at forthwith. It is unquestionably a very serious matter.

SANITARY WORKS IN PENRITH.

MR. ROBERT RAWLINSON, engineer to the Local Board of Health in Penrith, has recently completed their sanitary works of water-supply and sewerage, the particulars of which are as under:—

Water-works.—44,098 lineal feet of cast-iron pipes, from 12 inches to 2 inches diameter, or 394 tons; seventy-two hydrants or fire-plugs; seventy-seven supply and wash-out valves; a lower and upper covered reservoir; filter-beds; masonry, weir on the river Eamont; wheel-house; water-wheel, 18-horse power, undershot, 14 feet diameter, and 14 feet wide; double-acting pumps, &c. complete. The lower reservoir is of masonry, 61 feet by 60 feet by 19 feet deep, arched over and covered with soil. It will contain 370,000 gallons of water. The lift into it is 154 feet vertical. The upper reservoir is also of

masonry, 40 feet by 40 feet by 16 feet deep, holding about 150,000 gallons of water, also arched and covered with soil; the lift into it being 365 feet vertical. Water is pumped into these reservoirs from the river Eamont, and is from them distributed through the upper and lower parts of the town.

Sewerage.—The sewers are of earthenware pipes, with a brick sewer outlet, 20 inches internal diameter. The earthenware pipes are from 15 inches to 4 inches diameter, the latter being house and yard drains. The total length of sewers proper is 7,152 lineal yards. The sewers are laid in straight lines, and gradients throughout from point to point. At any alteration of line or of gradient there is a man-hole or lamp-hole to allow of inspection, and if need be of cleansing. There are forty-eight gullies, with movable sediment traps fixed.

Expenditure.—Total water-supply, 8,503*l.*; ditto, sewers, 3,109*l.*: total, 11,612*l.*

There are upwards of 1,200 houses in Penrith. In May last 433 houses were supplied with water, or about one-third the total number; the annual income from them being about 284*l.*

Most of the local wells and pumps in Penrith, besides being excessively hard, were tainted with cesspool and graveyard matter: the trenches for the sewers drained many of these, as also the surrounding subsoil, and the water first passing off, after the ground was opened, was most offensive.

Agricultural drain-tiles have been used below the sewer-pipes, to drain the sub-soil and house basements.

The money required to be raised to pay interest on the capital borrowed, and to repay the principal in thirty years, will be:—For sewerage, 179*l.* 17*s.*; for water, 490*l.*; or, on the rateable value, 11,612*l.*, a rate of 4*d.* in the pound for sewers, and of 10¾*d.* for water, making a total rate of 1*s.* 2¾*d.* in the pound to be paid, if no rent should be received for the water. It is, however, shown, that the voluntary rental paid for the water, when the whole are supplied, will alone more than pay the required principal and interest upon the money borrowed. The saving to the inhabitants, in soap and tea, will be several times the interest required.

Many opponents to sanitary improvement in Penrith declared publicly at the commencement that the rates would exceed 5*s.* in the pound for the works now completed.

SHAM BUILDERS.

Scott *v.* Greatorex.

The plaintiff in this case (tried at the Westminster County Court) turned out to be an "American architectural modeller," and the defendant is the proprietor of the Prince of Wales Hotel, Leicester-place, Leicester-square. The action was brought to recover the sum of 37*l.* under the following circumstances. In the month of November last the defendant required an alteration in two porticoes belonging to his house; moreover, he required a wall to be built, and some minor alterations. The plaintiff was introduced to him in the ordinary way, as "a person in the trade," and eventually a contract was entered into, by which the plaintiff agreed to do the work for the sum of 50*l.* Shortly after the men were set to work it was discovered by the defendant that the plaintiff was neither surveyor nor builder, nor anything of the kind, and that he was not acquainted with the business. The men, too, employed by him, were manifestly incompetent. From time to time he expressed his fears about the matter: the plaintiff, however, said he would rectify it, and the defendant allowed the matter to proceed. Thus things went on until shortly after Christmas, when one Saturday, having given the plaintiff a check on account, the men were left unpaid, and they having made a disturbance at the hotel, he (defendant) was compelled to give them a sovereign each. Upon that he determined, if possible, to bring the contract to an end, and when the plaintiff came to him in the following week, he remonstrated very strongly with him. The plaintiff then required him to advance the money for the labour, as it was necessary, and after considerable difficulty the plaintiff consented, in writing, to recede from the contract, and leave it in the defendant's hands. Shortly after this one of the men that had been sent by the plaintiff had to be given into custody upon the charge of stealing an umbrella from the defendant's premises, and the defendant then got rid also of the other men, and completed his alterations with other assistance. Some time after, to the defendant's surprise, he received a bill from the plaintiff for 37*l.* over and above the sum he had actually paid him. This claim he naturally resisted, and the plaintiff now brought his action. Mr. Scott (the plaintiff) was put into the box, nominally to prove his case, but he evidenced such ignorance of the ordinary details of building, as to excite the risibility of the audience. Another witness attempted to prove the value of the work. He turned out to be a picture-dealer, and the mode he had adopted to arrive at its value was by outward inspection merely. He had not measured it, and did not know how. The defendant (Mr. Greatorex) was then put into the box, and proved the facts which have been previously detailed, and that in all he had paid 61*l.* Mr. Russell, a surveyor of thirty years' standing, was then examined. He proved that he carefully examined the work done by the plaintiff, and that, as to the greater part, it would be impossible for him as a surveyor to have passed it. The judge (Bayley) then summed up the evidence, and returned a verdict for the defendant.

RAILWAY MATTERS.

A strike of railway labourers has occurred on the new works in connection with the Great Southern and Western Railway, Lower Glanmire-road, Cork. They have been receiving 10*s.* a week each, and their demand is for 12*s.*——The extension of the Newport, Abergavenny, and Hereford line, called the Taff Vale Extension, was to have been opened on Monday last from Pontypool to Crumlin, there forming a junction with the Western Valleys Railway. The Crumlin Viaduct is upwards of 200 feet high. It spans the Crumlin valley, supported by piers at distances of 200 feet, and is made entirely of iron. Its length is 1,515 feet. The work has been constructed by Mr. T. W. Kennard, of London.——Preparations are being made at Weymouth by Mr. Gillingham, ironfounder, towards getting the iron work ready for the railway station-house there, which is to be built principally of iron and glass, and will soon be required for use. The station-house alone will cost nearly 20,000*l.* Mr. Brunel, the engineer of the Great Western Company, went to Weymouth on Wednesday week, to witness the driving of the first pile for the foundation, but in consequence of the work not being in a sufficiently forward state, it could not be proceeded with.——The Great Northern Company have undertaken to supply a gas company in London with 3,000 tons of coal weekly. The average quantity weekly conveyed on the line is 17,000 tons. The managers of this company have supplied the company's servants with red neck-ties, in order that they may be more easily discerned by the passengers, and that in case of danger the neck-ties may be taken off and waved as signals.——Mr. W. Barningham, iron manufacturer, Salford, has patented a method of connecting rails. The inventor describes several methods of forming chairs, the chief of which consists in making them in two halves.——The culvert lately erected at the Glendon works, on the Leicester and Hitchin line of railway, has given way, it is stated, and must be rebuilt. It is said to have cost some 500*l.*

CRACKS IN LEAD.

In answer to "G. S." I am of opinion that gas tar, if properly mixed with very fine sifted ashes or sand, to the consistence of mason's mortar, and firmly put into the cracks (the wider the cracks the better the joint), and then rubbed over with a tarred brush, and afterwards slightly covered with dry sand, will become firm in a few days, or as soon as the naphtha in the tar has evaporated: this, I have no doubt, will effectually resist rain for a considerable period, and can be easily repaired by the same process. The tar may previously be boiled with a little rosin: if much is added, it will make the composition crack.

There is also another substance sometimes used by painters and others,—patent mastic, a powder: this is to be mixed with boiled oil to the consistence of painter's putty, and sets very hard in a few days. Either the one or the other I have no doubt will answer very well. I give the preference to the tar.

But if the edges of the cracks, as stated by "G. S." from some cause are disturbed by the springing of the lead, then I fear there is little hope of an effectual remedy: the lead should first be made firm.—H. H.

THE PROPOSED WELLINGTON COLLEGE, NEAR SANDHURST.

The site (of 132 acres) which has been obtained for the proposed Wellington College, is on the line of the Reading and Reigate Railway, not far from Sandhurst. The design decided on is by Mr. John Shaw, and is similar in architectural character to the Naval School at Deptford, by the same architect,—the style of Queen Anne, perhaps it may be called. The lowest tender for the execution of this design is barely under 40,000*l.* for the building itself, including the principal fixtures and fittings, to which must be added, the sums required for the purchase of the site, for the erection of a chapel and infirmary, for boilers and steam-machinery, for kitchen apparatus, and for ensuring an abundant supply of pure water, making the estimated total outlay 55,000*l.*

The design for the college consists of two quadrangles, surrounded by arcades of communication, the first being the school quadrangle, and the second the hall quadrangle. In the former, on the north side, is the entrance gateway in the centre, with the porter's lodge and office on each side of it; also the head master's residence on one side, and the secretary's or steward's residence on the other. On the south side is the school, in the centre of the building, and on the east and west sides are the class-room and the boys' library. In the second, or inner quadrangle, on the south side, is the hall; on the east side are the kitchen and domestic offices for the female department, communicating with a kitchen court; and on the west side the under-masters' rooms, their library, and the domestic male department. In a line with the hall, and facing the south, is placed the chapel on one side, and the infirmary on the other, a little removed from the main building, but communicating by covered ways. The dormitories are divided into separate rooms, one for each boy, about 10 feet by 7 feet.

THE MOVEMENT OF ATMOSPHERIC AIR IN TUBES.

A few weeks ago Dr. Chowne communicated to the Royal Society an account of some "Experimental Researches on the Movement of Atmospheric Air in Tubes," which bear very materially on the subject of ventilation. It is printed in Vol. VII. of the "Proceedings of the Royal Society," p. 466. The object was to ascertain whether the ordinary state of atmospheric air, contained in a vertical cylindrical tube, open at both ends, and placed in the still atmosphere of a closed room, is one of rest or of motion; and if of motion, to investigate the influences of certain changes in the condition of the atmosphere which either produce, promote, retard, or arrest the movement.

The experiments would seem to demonstrate that the ordinary condition of atmospheric air within vertical tubes, open at both extremities, is one of continual upward movement:—

"If the atmosphere were a strictly homogeneous elastic fluid, and in a state of perfect equilibrium, any portion of it contained in a vertical tube would of course be perfectly stationary unless some adventitious cause produced disturbance of its equilibrium. But our atmosphere being a mixed fluid, and the aqueous vapour being of a much lower specific gravity at all atmospheric temperatures than the compound of which it forms a part, it is constantly rising within a tube, as in the free air; entering at the lower, and making its exit at the upper orifice of the tube.

The experiments appear further to demonstrate, that the presence of aqueous vapour in the atmosphere is essential to the production of the current within the vertical tubes; since, by the abstraction of vapour from the air by quicklime, the rotations of the discs were invariably either diminished or caused to cease; while, on the other hand, when the proportion of aqueous vapour in the air was increased, the currents and the rotations of the discs were simultaneously accelerated.

In concluding the details of these experiments, the author considers that they all tend to prove the existence of an upward current, under the circumstances described in the commencement of this paper.

They moreover yield a series of results which he hopes the society will deem to be not without interest.

These results show it to be probable, if not certain, that the ordinary temperature of air within tubes, under the circumstances in which these were placed, is higher than of that external to them, all other relations of the tubes and surrounding objects being the same: they also show that in eight instances, when the thermometers indicated an equality of temperature within and external to the tube, the rotations of the discs still continued; and that when four coils of tape, moistened with water, were applied round the external surface of the tube, the rotations of the disc did not wholly cease.

They also show, that when the atmosphere of the room, in which the tubes were immersed, contained a larger or smaller proportion of aqueous vapour, all other things being equal, the discs revolved with more or less velocity; but that when the atmosphere was deprived in a great degree of aqueous vapour by the

presence of quicklime, the thermometric state in all other respects remaining the same, the revolutions of the discs ceased.

Adverting to the indications cited above, of a minute excess of temperature in the interior of the tubes, and assuming that even that slight excess would be sufficient to rotate the discs, still the rotations diminished or ceased in proportion as the aqueous vapour was withdrawn.

Any increase of temperature which might have been produced by the quicklime would have had a tendency rather to increase than diminish the revolutions of the discs, but we have seen that the abstraction of the vapour entirely arrested their rotation.

With regard to the specific influence of each of the circumstances and agents most probably concerned in producing the phenomena described above, such as protection of the air within the tube from lateral expansion and mechanical agitations, to which the external air is exposed; gaseous diffusion; the unequal specific gravity of air and vapour; and the subtle operations of temperature at all times, the author is fully conscious that he has not ascertained their respective values."

Notices of Books.

Examples of Building Construction; intended as an Aide-mémoire, for the professional Man and the Operative. Part I. By Henry Laxton. London: Arundel-street, Strand.

In this work, to be published monthly, Mr. Laxton proposes to bring together a collection of working drawings used in erecting various edifices,—public and private. Thus we have, in the present part, casement window and shutters, as executed by Messrs. Cubitt and Co.; the entrance-lobby of Reform Club-house, with outer and inner doors (Barry), &c. &c. The work is of large size, perhaps too large, and is published at a very low price, so that junior members of the profession, as well as mechanics, can have the advantage of possessing the result of the scientific labours of the many eminent men who have promised to aid the author in his undertaking. In connection with the *Civil Engineers' Journal*, and his "Price Book," Mr. Henry Laxton has been long a hard-worker, and has entitled himself to the hearty support of his professional brethren.

Observations on the Fisheries of the West Coast of Ireland and the London and West of Ireland Fishing Company. By T. E. Symonds, R.N. Chapman and Hall, Piccadilly. 1855.

We have repeatedly pointed attention to the rich mines of wealth on the west coast of Ireland, which are only waiting to be fairly broached, in order to enable them to yield a most abundant harvest, and to attract the attention and the capital of England, as well as the waste industrial energies of Ireland towards them. One great hindrance, we believe, to the opening up of these valuable fisheries has been the want of some such Limited Liability Act on Partnership as that just passed. Had it not been on this account, partly at least, a "London and West of Ireland Fishing Company" would have now doubtless been not only in existence, but in a highly flourishing condition, and conferring an immense benefit not only on the poor inhabitants of the west of Ireland, but on even those of the east of England and London itself, in showering on its shores a never failing supply of cheap and wholesome food. The requisite Act being now passed, a start has already been made towards the realization of this desirable state of things, by the publication of the "Observations" under notice, which are dedicated, by permission, to his true Excellency Lord Carlisle, the Lord Lieutenant of Ireland, by Captain Symonds, a gentleman whose public efforts in this and other good causes will make his name well known. The proposed company will carry on their operations by the aid of steam and other suitable vessels, so as to combine also the now isolated efforts of the small fishermen on the west coast of Ireland. The capital required to make a start is 30,000*l.*

Besides the supply of numerous kinds of fish, including salmon from the rivers and shell-fish from the shoal-banks, it is proposed that the coarser fish always caught, and always cast adrift again heretofore in fishing, and also any otherwise unsaleable abundance even of the more edible sorts—such as sprats,—shall be converted into an artificial guano of a very rich description, and indeed closely analagous to the real guano, which is essentially based on digested and semi-digested fish picked up by sea-fowl. Here, therefore, is a second source of valuable manure, heretofore as much waste in Ireland as the bogs, which are now yielding the valuable "peat charcoal;" and perhaps the new company may find it an additional advantage to combine the two, for all that we know: at all events, we should advise a trial of the effects of so feasible a conjunction of valuable materials for manure, since the charcoal would absorb, and so retain or save, an immense proportion of the valuable gases and fluids of decomposing fish, besides neutralising its offensive odours.

We are disposed to prognosticate a speedy and a permanent success to Capt. Symonds's excellent project.

VARIORUM.

We have just been speaking of peat charcoal. Mr. James Cuthill, in the second edition of his little pamphlet on "Market Gardening round London" (Hamilton and Adams, Paternoster Row), draws our attention to the excellence and importance of peat charcoal, or charred peat, as he calls it, as a manure for market-gardens. He tells us that it produces fine mealy potatoes, promotes quick growth, brings out the colours of flowers (this we pointed out some years since in reference to charcoal in general, a ring of which laid round the root of a dahlia, vivified, changed, and diversified its colours in a singular way, and we also suggested its application to the potato plant), and finally, this experienced market-gardener, having fully and fairly tried it, gives his opinion of it to the effect that it forms a "splendid manure,"—that is of itself, of course, and independently, altogether, of its other advantages in the way of manure as when mixed with decomposing animal matters, sewage, &c. ——In the Fifth Quarterly Report to the Dudley Local Board of Health, on the sanitary state of the parish, Mr. J. H. Houghton, the active officer of health at Dudley, gives a history of the occurrence of cholera in that town last year, and an instructive history it is, tending, as all such histories do, to establish the eternal association of cholera with filth. It is satisfactory to learn from this report that Dudley is making progress, slowly but steadily, towards a better sanitary state than heretofore. —— Messrs. Hodges and Smith, of Grafton-street, Dublin, have published a tract on "Schools of Industry," by Mr. Cheyne Brady, M.R.I.A. in which some account is given of various foreign institutions of this kind. The tract consists of a paper read at the Royal Dublin Society, and his commendable object seems to be their promotion in Ireland itself, which so much needs them, and which, however, appears to be now in progress of industrial resurrection.——A Quebec "Blue Book," on the "Condition and Prospects of Canada in 1854," has been printed there by Derbishire and Desbarats, her Majesty's printers. It contains several valuable communications or reports on the state of this now populous and rising colony, by Lord Elgin, the late Governor-General of the Canadas. From one of these we note that the total cost of public works of a productive kind, such as canals, down to 1852, was 2,834,234*l.* odds. The net revenue from these in 1851, was under two per cent. but it is progressively increasing. A strong feeling exists in favour of a ship canal from Montreal to Lake Champlain, and one from Lake Huron to Lake Superior, at the Sault St. Marie.—— "Gilbert's Official Guide to the New Newspaper and Book Acts and Warrants," is a sixpenny publication, by Gilbert, of Paternoster-row, which will be useful to all classes, trades, and professions.

Baths and Washhouses for the City of London.—A petition to the corporate authorities for the establishment of baths and washhouses in the City of London, has been unanimously adopted by the guardians of the West London Union.

Miscellanea.

Projected Tunnel Railway to France.—It is not Englishmen alone who propose to join France and England in closer physical connection than heretofore, and so promote their permanent intercourse and amity. M. Favre, an engineer, according to *Galignani*, has lately published some observations relative to the possibility of making a railway under the Channel. Its length, he says, would be 30 kilometres (18¾ English miles). He proposes that the tunnel be pierced so as always to leave 25 metres at least between the arch and the bottom of the sea, and be lined with a double archway, one of bricks, and the other of iron, this latter pierced with narrow openings, to at once allow the slightest infiltration to be perceived. Engineers, M. Favre states, are estimating the cost of such a tunnel.

Windsor Castle.—The extensive works commenced at Windsor Castle in April last, will, it is expected, be completed in October next. They consist of the digging out and carrying away upwards of 6,000 loads of chalk for the formation of a subterranean passage 300 feet in length, and varying from 7 to 30 feet in width, extending from the northern wing, and passing beneath the quadrangle to the southern wing of the castle. The passage will derive light from ten or twelve glass openings in the quadrangle, covered by iron gratings so arranged as to escape particular observation. Connected with these passages will be a number of large coal-cellars, having thus access to her Majesty's private apartments and numerous other rooms in the southern side of the castle. The works are being carried on by Mr. Strong. The stone pedestal which supported the equestrian statue in bronze of Charles II. at the west end of the quadrangle has been removed, and one of red granite substituted. The stone wall at the Castle boundary, leading from Henry VIII.'s gateway to the bottom of the Hundred Steps, is now progressing towards completion. It is said that the Commissioners of the Board of Works contemplate lowering the terrace-wall looking from the Lower Ward into Thames-street, and placing cannon in the battlements.

The Officers under the Metropolitan Management Act.—Since Sir B. Hall's Bill has been framed with the main object of a thorough revision of the executive, as regards the employment of inefficient persons in the superintendence of parishes and parochial work, may I suggest to those with whom the power will be vested of engaging the necessary officials, the propriety of a personal examination of each candidate; so that those only who are practically acquainted with the working of the different branches may be engaged to superintend. There are many surveyors' and builders' clerks, without patronage or influence, who would be satisfied with a moderate salary, and be of infinitely more use than the staff at present employed, which seems to have been called from all trades and profesions under the sun.—Spes.

The late Mr. Hoof, the Contractor, was known to so many of our readers, that a reference to his death, and the sad circumstance attending it, seems called for. Mr. Hoof died suddenly at his house, the corner of Victoria-road, in the Kensington-road, on Saturday, 11th, and on the same day, Mrs. Hoof, overcome by the shock, died too. They were both buried on the following Saturday, in the cemetery at Brompton. Mr. Hoof was one of those whom the world calls lucky, and with apparent justice. He had made a large fortune—some say half-a-million of money, and had put himself down amongst his family to enjoy it. Some time ago he lost a favourite son by cholera, and now,—Alas!

The British Archæological Association are holding their meetings in the Isle of Wight. We will give some particulars hereafter.

The Shrewsbury Burial-board Tenders.—We have received strong complaints of the way in which the contractors who tendered for the erection of chapels and gates for the cemetery have been treated. Three tenders were received,—Messrs. Groves, Shrewsbury, 5,120*l.* for stone, and 5,471*l.* for brickwork; Mr. R. Dodson, Shrewsbury, 5,049*l.* for stone, and 5,031*l.* for brickwork; and Messrs. J. Dickson and Co. Wellington, 4,393*l.* 3s. 7d. for stone, and 4,325*l.* 18s. 10d. for brickwork. It was resolved that the buildings should be erected with stone. Mr. E. Hughes then moved, and Mr. R. Davies seconded, a proposition that Messrs. Groves's tender should be accepted, *on the ground that they were townsmen.* Upon this the Rev. James Colley moved, and Mr. Timotheus Burd seconded an amendment, that Messrs. Dickson's tender be accepted. Upon the amendment being put, it was lost by nine to five. The original motion was then carried by nine to eight. In all justice, when responsible contractors have taken the trouble and incurred the expense of preparing tenders, the lowest should be accepted. Mr. Dodson is also a *townsman*, so that the plea here for taking the highest fails.

Electro-telegraphic Progress.—The Mediterranean Telegraph Company have announced a plan of extensions from Algiers *vid* the Red Sea, to the western coast of India, and from Pegu to Australia and Van Diemen's Land. In a few weeks their line will connect London with Algiers, in Africa, *vid* Corsica, Sardinia, and Cape Spartivento, whence it is proposed also to run a branch to Malta, Corfu, and Constantinople. ——For some time past, a submarine cable has been in process of manufacture at the works of Messrs. Newall and Co. North Docks, Sunderland, which is intended to be laid down from Constantinople to Varna. This cable is 160 miles in length, and weighs upwards of 300 tons. It will be connected with the main line of telegraph from the seat of war, and by this means the palace of the Sultan will be in communication with the head-quarters of the allied armies now before Sebastopol, as well as with London and Paris. The *Gateshead Observer* reports the embarcation of this cable on board an iron screw-steamer, named the *Elba*.——In a few weeks, the New York, Newfoundland, and London Telegraph Company will have their line finished as far east as St. John's, Newfoundland. The wire for this line left London on the 28th ult. and a steamer is to be chartered to tow the vessel containing the wire, in the process of laying it down.——M. F. V. Guyard, Gravelines, France, according to the *Mechanics' Magazine*, has secured a patent, by which he claims—1. Constructing apparatus for effecting electro-telegraphic communications with trains or railways, in such manner that the distance from the train to which such communications extend is regulated by adjusting the intensity of the current of electricity; 2, 3, and 4, other modes described.

Stone for Lithographic and Architectural purposes in Jamaica.—A printed prospectus of "The Jamaica Stone Company" has been forwarded to us, from which it appears that a discovery has been made of extensive quarries of lithographic and other valuable stones, suitable for monumental statuary, and various purposes, on estates in the parish of St. George, and within three miles of a shipping port. A report, by Mr. E. C. Lewis, of Church-street, Kingston, states that there are fully 1,000 tons now ready to be removed, on the formation of proper roads, &c. and that some of the material is similar to the *Builder's* description of the stone of the Houses of Parliament, and to the stones of which the Palace of the Carousel at the Tuileries, and the Grand Mosque of the Turks are built. Specimens are being, or have been, forwarded to the International Exhibition at Paris, and a small fragment of the lithographic stone was enclosed to us with the prospectus, which seemed of the right sort.

Building Accidents.—On Saturday before last two men were killed at the railway-bridge works now in progress at Rochester, for the East Kent Railway, which is here to cross the Medway. The men were at work in a cylinder sunk in the bed of the river, with a diving-bell and stageing above, when the buckets carrying up soil gave way, and the stageing, bell, &c. fell on them, and crushed them to death. It is rather singular that this is the second instance within the last month in which fatal accidents have occurred at bridge works, in connection with diving-bells, and yet that neither in the case at Westminster, nor in that at Rochester, can the bell itself be said to have been in fault, or really the cause of the accident.——Mr. John Sinclair, the sub-contractor of the Durham viaduct, on the Bishop Auckland Railway, now in course of construction, was killed on Monday before last, by a fall of stone.——On Wednesday week, two children, at Teignmouth, were playing near some blocks of stone, in the station-yard, when one of the blocks, which weighed 2½ tons, fell on them, crushing both to death. The mother is said to have since become insane in consequence. ——A western paper, chronicling the lamentable occurrence of a stageing attached to a church being blown down, very feelingly adds,—"We are happy to state that over twenty persons were suddenly brought to the ground—safe, and one man, Mr. Willkins, had his neck broke! Mr. W. was an estimable young man, and the father of a good many children, besides a large farm, well stocked. He was fatally injured."—If the neck of the poor man was broken, we should think he *must* have been "fatally injured,"—and doubtless he died.

The Northampton Surveyorship.—Mr. Jones, of London, has been elected surveyor to the town of Northampton, and also inspector of nuisances, with an assistant to act as inspector for six months, after which to provide for the latter's duties himself. The salary of the surveyor is 200*l.* a year. Mr. Law, a local improvement commissioner, protested against the intention to call upon the surveyor either to provide an inspector of nuisances, or to act as such himself, although he did not object to the surveyor being the superior, and responsible for the right fulfilment of the duties of the Board's inspector.

The Iron Trade.—"We hear with regret," says the *Birmingham Gazette*, "that some of the iron-masters talk of an advance of 2*l.* a ton (!). These sudden jumps have seldom been maintained, and are always productive of mischievous consequences. A rise of this kind will in all probability increase the make in America by a hundred thousand tons next year, and so help to remove a valuable portion of the trade from South Staffordshire. [That is not now to do, we fear.] The masters urge difficulties with the men as a reason for this large advance: in reply we have only to state that an opinion is very generally entertained, that by union and confidence amongst the members of the trade, the men might be properly controlled, with advantage to themselves, and equally so to the trade itself."

Holy Trinity, Newington.—The tenders for repairs at the Holy Trinity Church, Newington, under Mr. Henry Jarvis, architect, were as follow:—Cook, 543*l.*; Fisher, 493*l.*; Ott, 400*l.*; Thornhill, 339*l.*; Thorpe, 327*l.*; Mills, 314*l.* 9*s.* Mr. Thornhill's was accepted.

Science and the Government.—The special parliamentary committee of the British Association for the Advancement of Science, charged to inquire "Whether any measures could be adopted by the Government or Parliament that would improve the position of science or its cultivators in this country?" has collected from men of science a body of interesting information, which has been embodied in the form of a report, to be presented to the members of the Association at their Glasgow meeting. This report appears to have been adopted unanimously; and its suggestions cannot fail to command the instant and serious attention of the scientific world. The *Athenæum* of last week quotes its principal passages.

The Inns; Shrewsbury Congress.—Our correspondent's comment on the charges and discomforts of his inn at Shrewsbury, during the recent archæological congress, has been borne out by several letters to us on the subject. One writer tells us that he was charged fifteen shillings per night for three beds,—self, daughter, and servant. Such charges, coupled with inattention, should be reprobated: they will deter prudent people from attending these excursions.

The late Mr. Patrick Park. Mr. Park, the sculptor, who died prematurely a few days ago at Warrington, was a native of Glasgow, and studied under Thorwaldsen at Rome. He was remarkable for the vigorous and faithful expression of his busts. He was something more, however, than a bust maker: he had much poetic feeling, and has left some works which approach the heroic.

Water-supply.—It is a singular fact, that since the introduction of the new supply of Thames water within the last month, from the new works of the Vauxhall and Southwark Company at Hampton, to the inhabitants of Lambeth, South Lambeth, Clapham, and Southwark, by the statement of the sanitary condition of the metropolis in the *Times* of 22nd inst. the *south side* of the Thames has all at once become the *most healthy*, and this has been stated for the two last weeks; thereby proving, in a sanitary point of view, the value of a pure water supply to the inhabitants of London; and as I have not seen any notice from that company advertised, stating the supply to come from the new source, although we have had it now for nearly a month, I thought it worthy of remark in your valuable journal, that the inhabitants might become acquainted with it more generally, and note from week to week the results of the new supply.—X. Y.

The Glass Trade. — Mr. A. Quertinier has patented a method of causing heat, ignited gases, hot air, and products of combustion to pass from the fire-place of glass furnaces through side channels or apertures, and to circulate under the floor of the melting-chambers, so that the greatest possible transmission of heat to these chambers shall be obtained. ——The glass-works recently carried on at South Shields by the Tyne and Tees Glass Company have passed into other hands, under whose management they will shortly resume work.

File-Making by Machinery. — A file-cutting machine has just been patented by a Mr. Ross, of Glasgow. By its agency, says the *North British Mail*, files can be struck, and that in a superior manner, with an advantage in labour alone of at least 200 per cent. over the old process of hand-striking. A skilled file-cutter will strike by the hand somewhere about twenty common 40-inch flat bastard files in a day. One of Mr. Ross's machines, under the direction of a boy, will strike sixty files in the same amount of time. The machine is so simple, too, that an uninitiated boy can in a few hours be instructed to attend it. A one-horse steam-power is capable of driving six of these machines, and with some practice, a lad might be able to attend two of them, for they stop of themselves when a certain portion of work has been completed. The machine-made files have already found their way extensively into use, even on the other side of the Atlantic.

Fire at Mr. Myers's Premises.—The premises at Lambeth occupied by Mr. Geo. Myers, the contractor, caught fire on Tuesday last; but, fortunately, the damage done is inconsiderable.

Architects' Benevolent Society.—Considering that the appointment of an influential member of the profession in each of the most populous provincial towns, to act on behalf of the Architect's Benevolent Society, and in furtherance of its objects, would tend materially to extend its usefulness, the council have created an office to be styled that of Corresponding Member of the Council; the appointment to be for three years, and to be renewable at the end of that period. The duties of such officers are,—to obtain new members; to communicate to the honorary secretary any cases within their own knowledge that may be deserving of the attention of the council, and otherwise to promote the benevolent objects of the society in every way in their power.

Naval Raft Building.—The difficulties which have occurred in the prosecution of the present war from the deep draught of our line-of-battle ships, says the *Times*, may, perhaps, secure attention to the following design for a great raft, propelled by an immense steam-power, which has occupied the thoughts of its projector, Mr. Daft, civil engineer, for a period of thirteen years. It is proposed that the raft should be composed of a deck of timber 6 inches thick, resting on 300 pontoon-shaped iron boats, nearly all 100 feet long, by 10 feet wide and 7 feet deep, having semi-circular bottoms and sides, and hatchways opening into each. The deck area would be little short of ten acres. Bulwarks are contemplated, 12 feet 6 inches high, and consisting of hollow iron stanchions, with iron compartments between. It is proposed to propel this raft by twenty-two steam-engines of at least 200 horse-power each, eleven on each side, with paddles and screws alternately. The raft would, it is added, carry a freight of 20,000 tons, obtain a speed of fifteen knots an hour, draw only 3 feet 6 inches of water, and give a surface sufficient to act as a floating breakwater in the roughest sea. The projector contends that it will be impossible to founder such a structure; that in case of running ashore the boats grounded can readily be drawn off by the power of the engines; and that the principle of the design involving the repetition of so many given parts, as in the architecture of the Crystal Palace, these can be let out to different contractors, and the whole got together with the greatest rapidity and ease. In the Black Sea, or Sea of Azoff, and the Baltic smaller rafts so constructed might be of advantage, but we can scarcely see what use could be made of so unwieldy a structure as this, unless it were for the mere transport of an army. It is fitter for taking whole colonies of emigrants to Australia or America than for war with Russia.

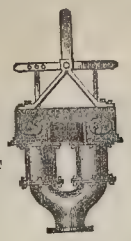
Greek Antiquities at Calymnos.—At the recent meeting of the Archæological Institute at Shrewsbury, a letter from Mr. Charles Newton, late of the British Museum, and now her Majesty's consul at Mytelene, on some "Interesting discoveries in the Greek island of Calymos," was read. The paper detailed the result of certain excavations made in the neighbourhood of Damos, where a number of Greek tombs have been discovered, containing pottery, &c. Sepulchral jars had also been found; and Mr. Newton stated that he did not know that this method of interment in jars had been elsewhere explained. This, he thought, might elucidate a disputed passage in Pliny. What was called the tub of Diogenes was, in his opinion, no tub at all, but a large sepulchral jar. In other parts he had found graves which presented evidence that they were graves of Romans. The vases found in the graves were of a date considerably anterior to the Christian era, and in many of the graves were discovered lamps or cups. The paper next went to describe researches on the site of the Temple of Apollo, where the small church of Christos had been built, chiefly out of the old materials of the temple. Here a number of antiquities had been discovered, including a very fine sword handle.*

"To Lichfield.

"Old rural city, how thy pointed spires,
So chastely etched, spring from the rising knoll,
Salute the morn and day's departing fires,
And moon or sun-lit seem a breathing whole.
Thy swinging bell resounds upon the lea,
And tells of worship to the far-off Trent,
And of the short-breathed hours that passing be,
By whose small thefts the richest life is spent.
Yet the brief day of man has cultured been
Beneath thine auspices. Yon school below
Has nourished pupils for the tragic scene,
And ample lists of essayists can show.
Here Addison first learnt to fashion prose,
And Johnson, lord of common-sense, arose."

Feltham Burghley.

* We will take the opportunity to say, that the archæological meeting has been fully and ably reported in the *Gentleman's Magazine* of August 10th and 17th.



FOWLER'S
IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, at 15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

ON SALE SINGLE PUMPS, BARRELS AT SHORTEST FOR HAND STEAM

AND HIRE, AND DOUBLE 3 in. to 15 in. to any depth, NOTICE, OR POWER.

FOWLER'S
PORTABLE PUMPS,

3-inch to 9-inch Barrels, Plain or Sliding Telescope Suction.

Wrought-iron Pails, Galvanized or Painted.

Pulley Blocks of every description.

BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.

RINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-s, London, continue to supply the trade with all descriptions marble, in Block and Slab, at the lowest prices.—N.B. A good k of Statuary Slab on hand, suitable for shelves.

OHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab rble mortars, &c.

YORKSHIRE STONE.
NEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, Masons, that they can supply to any extent all kinds of YORKNE, including Paving, Bramley Fall, Park Spring, &c. of the y best quality, direct from their Quarries, to all Railway Stan and Ports in the Kingdom, on the most reasonable terms. NEO. VINT and BROTHERS will gladly forward prices by t on application. Address, Idle, near Leeds.

AYTOR GRANITE COMPANY.—Incorporated by Royal Charter.—London Agent, C. HOAR, 4, Millbank-row, Westminster.—This Granite was used exclusively in Nelson Monument, Trafalgar-square; King William Monument, City, and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

CAEN and AUBIGNY STONE.—J. P. FOUCARD, Stone Merchant and Quarryman. Cargoes pped to order from Caen to any port. Contracts taken for any antities. Depôts: Granite Wharf, East Greenwich; Lett's harf, Waterloo-bridge. Office: 246, High-street, Southwark, ar the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Peterborough-court, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, ORTLAND, and YORKSHIRE STONE

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, rtland and Derby Stone, Bangor Slates, Slabs, &c. Also icks, Lime, Cement, Plaster, Tiles, Ladies, and Fire Goods. OULES and WOOD invite the attention of Builders, Masons, d others, to their Stock as above, where everything will be arged at the lowest prices. Headstones, Ledgers, Steps, Landgs, &c. cut on the shortest notice. Country orders promptly tended to

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tanfield-place, Leeds. To Builders and yers of the Best Quality.—Direct from the Quarries in truckads of five tons. Paving, Landings got out to sizes, Steps, pings &c. &c supplied on most advantageous terms by railway, d with despatch. Prices sent on application.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-urt, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard
This Granite is selected for the New Westminster-bridge.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in its most durable material. A large Stock kept of Mantel-pieces, ntitudes, quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit any part of the kingdom, furnished on application to Bath one Office, Bersham, Wilts.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Builders, Contractors, and Others, that his Price Lists for ates and Slab Work, can be had on application, enclosing a stamp. Country and export orders promptly attended —N B. A liberal discount to the trade.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs ow supplied, of very large dimensions and of superior quality. hey have been used at the British Museum, National Gallery, ctleton Hospital, various Lunatic Asylums, the Ordnance Works, odel Prison, Pentonville, and other Penitentiaries; Malting ors in Bedfordshire and Hertfordshire, Breweries, the Race and at Brighton, Portsmouth Barracks, and are kept in stock in ge quantities by Messrs. FREEMAN, Millbank-street; also y Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-ad, where terms may be obtained.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.
ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate Cisterns made any size. J. HOWELL, Manufacturer, 8, Cook's-grounds, King's-road, Chelsea, Middlesex.

ENAMELLED SLATE.—REDUCTION IN PRICE. Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work—PIMLICO SLATE Works, 39 and 40, Upper Belgrave-place, Pimlico

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to COLES and WOOD, Market Wharf, Regent's-park.

LLANGOLLEN FLAG and SLATE COMPANY. The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag-Stone Company and the Llantysilio Slate Company, are now prepared to supply architects, contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description: Cisterns, Chimney-pieces, Baths, Filters, Larders, Mangers, Ridging, and every other article made of this beautiful material, all of superior quality. The Llangollen Slabs, from their great durability, and the extraordinary size in which they can be obtained, are peculiarly adapted for the paving of railway stations, malthouses, breweries, conservatories, warehouses, &c. A cheap variety of self-faced flags for street paving, &c can be supplied at very moderate prices.—Prices and further particulars can be had upon application to Messrs. JOHN TAYLOR and SONS, 6, Queen-street-place, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, 4 Wharf, South Wharf-road, Paddington; or to Mr. GEORGE P. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses and every description of Pavement laid down at the above low price, and the work guaranteed.
Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

TO BUILDERS, SCULPTORS, AND MASONS—WHOLESALE STONE DEPOT, No. 3 KING'S-CROSS RAILWAY.
SAMUEL TRICKETT begs to inform his friends and the public, that he has OPENED a DEPOT at King's-cross Station, where he has a stock of HEADSTONES, Block York, Rawdon-hill, Harehill, and Potternewton, in block, dressed and self-faced Landings, Copings, Cills, Sinks, Slabs, Steps, and Pavings, on the most reasonable terms. A single truck load direct from the Quarries, at wholesale prices.—Address, S. TRICKETT, Manager, at the Depôt; or S. TRICKETT, Stone Wharf, Isle of Dogs.
FIRE GOODS, TERRA COTTA, AND GRINDSTONES.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Blocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

J. TYLOR AND SON'S BATH APPARATUS.

To fix a Bath, the apparatus for heating which can be fixed in the same room, and the luxury of an Open Fire retained.

A. Copper Boiler of sufficient capacity to make a warm bath, clasped by an iron band to support it, and fixed in the breast-work of a chimney. A flue is carried all round, and the draught is regulated by a revolving damper, *B*, which covers the opening into chimney. When set, the Boiler is entirely concealed from view.

This Boiler can be adapted for any chimney, by making it of an oval or elongated form.

A soot-door is fixed just underneath the damper for the convenience of cleaning, which, however, is rarely required, on account of the great draught round the boiler preventing any deposit of soot.

C. An ordinary stove front with sliding blower for the additional regulation of the draft.

E. Copper or tinned iron Bath, enamelled white marble inside, having three copper pipes, for the hot, cold, and waste water, which are indicated by the engraved levers on the cocks. The overflow is carried into waste-pipe *K*.

F. Cistern for cold water, say 100 gallons, which can be made of tinned iron, or any suitable material, either fitted into a recess or made of a cylindrical shape to stand on the floor of any room above the bath. The overflow can be carried into the waste or other convenient outlet.

G. Inch pipe from cistern to the pipe which goes to the bottom of boiler to fill it with water. A branch from this pipe also supplies the bath with cold water.

H. Inch pipe from the top pipe of boiler, to deliver the hot water into bath.

I. Half-inch pipe taken from the hot pipe *H*, and turned over the top of cistern to relieve the boiler.

K. Inch or 1¼-inch pipe to take away waste water from bath into soil-pipe or drain, as may be most convenient, and must be well trapped before entering.

L. Round copper or tinned iron Shower Bath, suspended from ceiling, and filled with hot or cold water by branches from the pipes *G* and *H*, the supply being regulated by the two cocks *M M*, which are let in the wall, and the levers fixed on them, engraved, "hot and cold shower."

A thermometer can be fixed in the shower-bath to regulate the temperature.

N N. Wash-hand basin supplied with hot and cold water, by branches from the pipes *G* and *H*, the waste being carried into the overflow of bath.

By this simple arrangement, the boiler is always kept full of water, and cannot, by any means, be emptied by the action of the fire. The draught is so regulated by the blower and damper, that a bath can be made in twenty minutes, or an open fire kept continually alight.

WARWICK-LANE, NEWGATE-STREET, LONDON.

CHRIMES' PATENT.

GUEST and CHRIMES, ROTHERHAM, and 7, SOUTHAMPTON-STREET, STRAND, London, Manufacturers of CHRIMES' PATENT HIGH PRESSURE LOOSE VALVE GUARDS,

Baths, and Mops's, and Chrimes'

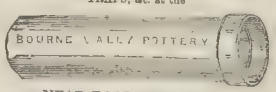
And all other Articles required for Water Works Purposes, &c.
LONDON HOUSE,
Mr. THOMAS BUGGS, 7, Southampton street, Strand, General Depôt for Sanitary Articles, including Wash and Plug Basins, Hoppers, Traps, &c. The attention of Architects and Builders is particularly requested to the various appliances for applying to mains, Cesspools, and Drains, including three-quarter and Chimney Cans, and to Thomas's Improved Urinals for angles and flat walls, as fitted at the King's College Hospital, and other Public Institutions.
Plumbers' Brass Work of every description.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA COTTA was AWARDED to HENRY HARD, late of Doulton's Original Works, and has been confirmed on the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in the country, and eminent architects and others, in the adornment of their buildings. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition, and will be found to be a different material to that now being imitated by puffers and manœuvrers, with only three or four years' experience, and without practical knowledge. Some of the works recently completed by H. H. can be referred to, which, at the solicitation of the subscribers to the external part of Child's House, as near the Duke of Sutherland's, also Tottenham and Hampstead Churches; the turrets to the Camden-road Chapel, extending from 70 to 75 feet cube; the colossal Britannias, 25 feet high, at the County Fire Offices, Cornhill and Lombard-street; the Arms, with the allegorical group, at the Kent Mutual Insurance Office-street; and other works elsewhere, too numerous for mention. A large Stock of newly designed Chimney Shafts, Pots, to suit the various castles of the Nobility, at very low prices, and Models of both.



JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY
Stocked and Steeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and hedged on a new system, which gives a superior tone and facility for ringing.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

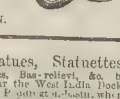
NEAR POOLE, DORSET.

These Pipes being made under pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are found superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the finest quality. Pattern of the article, and will be sent on application to
THE AGENTS:
Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;
Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;
Where a large stock is always kept on hand.

HENRY MILLICHAMP,

MANUFACTURER OF
GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.
65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERIES, COMMERCIAL-ROAD EAST.

Watercloset Pan with Syphon-Trap connected.



A LARGE ASSORTMENT OF STRAIGHT TUBES IN 2 FEET LENGTHS.
Bends, Elbows, Urinals, Gulli-Traps, Flap Traps, Syphon-Traps, &c. always kept in Stock.

Watercloset Pan with Syphon-Trap connected, price 5s. 6d. each.

DRAWING AND LIST OF PRICES FORWARDED FREE ON APPLICATION.

ASPHALTE PAVEMENT, 2s. 3d. per yard, [illegible] for Footpaths, railway platforms, [illegible] Carriage Roads; 3s. 6d. to 5s. per yard. Lay a description of pavement laid down, and the work guaranteed.—Apply to Messrs. WRIGHT and BROWN, 32, Bucklersbury, City.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Kirkpatrick-street, Limehouse, begs to inform Engineers, Architects, and Builders that he has now on hand a large supply of Asphalte, suitable for Railway Arches, 35s. per ton; Flat Roofing, 3d. per foot. Depôt, Devon Harbor Wharf, Rotherhithe.
C. H. CLARK, Agent.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West India Docks Station, and at No. 1, Pearl-street, Bedford-square, where prices and designs can be obtained. Examples of Terra-cotta by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Ariadne, Venus di Medici (colossal), the Fauns in the gardens at Sydenham, are in Terra-cotta, as are the Fauns in the Renaissance Court and the roof of the Alhambra Court. The Pompeian roofs of Terra-cotta and Cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

TRELOAR'S COCOA-NUT FIBRE MANUFACTURES, consisting of Matting, Mats, Mattresses, Brushes, Nettings, &c. are the most cheap for quality and excellence of workmanship, combined with moderate prices. Prize medal in England and America, at the Exhibition of all Nations.—T. TRELOAR, Cocoa-nut Fibre Manufacturer, 42, Ludgate hill, London.

SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION-PLACE, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed a new and improved patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it secures perfect uniformity in form and size both in pipes and sockets, the accidental existence of a different and better construction than any now in use, and the pipes and sockets being made by one process are secure from separation.

W. NORTHEN invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to obviate the possibility of any stoppage in the drains.

NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Morton and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horseshoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharf, Battersea Bridge, and Creek Wharf, Hammersmith.—J. Corbett's Depôt, Britton-street, Chelsea; and at the Pottery.

[ADVERTISEMENT.]

BURGLARS DEFEATED.—CHUBB'S GUNPOWDER PROOF SAFES.

"9, Cousin-lane, Upper Thames-street, London, July 6, 1855.

"GENTLEMEN,—The safe you fixed here some years ago has indeed proved a good one, and done good service. Last week some thieves broke into our office, and tried their knives and then gunpowder, but both proved vain; for money, bills, and deeds were all safe enough in your 'safe,' and under your lock and key. We have great pleasure in informing you of this, of which you can make any use you please. — We are, gentlemen, your obedient servants, — JAMES NICHOLSON and Co.

"Messrs. Chubb and Son, 57, St. Paul's-churchyard."

Chubb and Son, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

AGRICULTURAL MACHINES.—A CLERK and BOOK-KEEPER WANTED. Salary required, and testimonials of character in this particular trade, to be sent, prepaid, to "CLERK," care of WHITLEY, Advertising Agents, 5, Lombard-st., London.

BUILDER'S CLERK.—WANTED, a few miles from town, a CLERK who thoroughly understands Builders' accounts, and a good letter, prepaid, stating age and how formerly employed, with salary required, to E. B. care of Mr. Booth, 4, Lyon's-inn-chambers, Newcastle-street, Strand.

SAW-MILLS.

WANTED, a Person competent to take the CHARGE of a SAW MILL, in the occasional absence of the Proprietor. He would be required to assist in the trade when not employed in the Mill. He would be required to keep the books.—Address, by letter, stating full qualifications and terms, to M. N. Mr. Baker's, 12, Clement's-lane, City.

WANTED, an experienced BUILDER'S CLERK, competent to make estimates, measure works, and undertake the general routine of the office. One with a thorough knowledge of carpenters' and painters' works will be preferred. Address, stating salary required, and where last employed, to A. Z. Messrs. Farmiloe, Rochester-row, Westminster.

WANTED, an experienced BUILDER'S FOREMAN, with a thorough knowledge of every branch of the business.—Address, stating age, salary required, and where last employed, to A. Z. Messrs. Farmiloe, Rochester-row, Westminster.

WANTED, THREE or FOUR GOOD JOINERS and CARPENTERS. Liberal wages will be given.—Apply to Mr. WM. SHEARBORN, Dorking, Surrey.

WANTED, in the country, about thirty miles from London, a WORKING FOREMAN of CARPENTERS, to take charge of a job.—Apply to S. C. Office of "The Builder."

WANTED, a CLERK of the WORKS, to superintend a mansion near Southampton.—Apply to Mr. ALFRED C. LUCK, Architect, Offices, Onslow-road, Southampton.

WANTED, a FIRST-CLASS GRAINER, to fill a permanent situation.—Patterns, with terms, addressed to JAMES BIRKETT, Decorator, 9, St. James's-square, Bristol, will receive immediate attention.

TO BUILDERS' YARD FOREMEN.

WANTED, an active, intelligent Person, as YARD FOREMAN, and capable of superintending timber framing and rough carpenters' work.—Address stating age, particulars, and wages required, to B C Office of "The Builder."

TO SHOP-FOREMEN.

WANTED, as WORKING FOREMAN of CARPENTERS and JOINERS, a practical Man, thoroughly acquainted with the trade in all its branches, competent to set out working drawings, and convert materials to the best advantage. Apply, stating age, wages, and reference, to GEO. ROBINSON, Builder, Redditch, Worcestershire.

TO ENGINEERS, WATCHMAKERS, &c.

WANTED, a Young Man who thoroughly understands turning and fitting German silver and other metals. A clever mechanic will be instructed in the branch of work for which he is required, and receive good wages. Apply to BOOSEY and SONS, 24, Holles-street, Cavendish-square.

TO STONE-MASONS.

WANTED, for a permanency, a MASON, competent to undertake general stonework, including church and cemetery work. First-rate references will be required. Apply by letter to JOHN BOYD, Builder, Huntingdon.

TO CLERKS.

WANTED, an experienced Young Man as BOOKKEEPER and COLLECTOR. Must be thoroughly acquainted with a timber merchant's or builder's office. Situation permanent. Salary moderate.—Apply by letter, with full particulars, to Mr. G W. FRY, 16, St. John's wood terrace.

TO MARBLE MASONS.

WANTED, by the Advertiser, a SITUATION in a Marble Mason's Shop. The Advertiser could assist to keep the books, being a good accountant. Wages not so much an object as employment. Good references.—Apply to A. B. C. 5, Molyneux street, Edgeware-road.

TO LAND OWNERS, BRICK MERCHANTS, AND OTHERS.

WANTED, by a Young Man of good Testimonials, a SITUATION to take the Management of Brick and Tile Works, at a weekly salary or at per thousand Red or White Bricks. Drain-pipes, Tiles, &c.—Address, E. W. Mr. Wm Wright's, Brick and Tile Kilns, Barnet Common, near Barnet, Herts.

CLERK OF WORKS OR SUPERINTENDENT.

WANTED, by a Person of long practical experience in the Construction and Superintendence of Railways, Churches, Prisons, and other Public Buildings, an APPOINTMENT under an Architect, Builder, or Private Party. Will be at liberty in a week. The best reference given from former employers and standing buildings.—Direct, L. C. B. 14, Gillett street, Grosvenor square, London.

WANTED, by a Practical Man, aged 31, a SITUATION, either as Clerk of Works, Draughtsman, or to take charge of a Business. Salary expected moderate, and unexceptionable references given.—Apply to P. L. B. Chetwynd-end, Newport, Salop.

TO BUILDERS, PLUMBERS, &c.

WANTED, constant EMPLOYMENT by a respectable Young Man, as PLUMBER and GASFITTER, &c. No objection to fill up his time with glazing, if required. Can be well recommended by his last employer. No objects in the country.—Address, W. B. 24, Trafalgar-road, Greenwich.

TO GRAINERS AND DECORATORS.

WANTED, to APPRENTICE a respectable YOUTH, sixteen years of age, to the above trades.—Address, prepaid, to R. care of Mr. Greaves, Wax Chandler, 30, New-street, Covent-garden.

TO SURVEYORS AND LAND AGENTS.

WANTED, by a Young Man, who has served his articles with a surveyor, and is generally acquainted with the routine of agency business, an ENGAGEMENT in either of the above departments. Respectful references given.—Address, E. Y. P. Post office, Knowle, Birmingham.

WANTED, by a practical CARPENTER, aged 30, a SITUATION as shop or general FOREMAN OF WORKS. Has no objection to the country, or to go abroad.—Address, G. H. at Mr. Pearce's, 3, High street, Hampstead.

TO WRITERS, BREWERS, AND DECORATORS.

WANTED, by an experienced Young Man, a SITUATION as WRITER and PENCIL HAND, thoroughly understands embossing, oil gilding, &c. No objection to the country.—Address, S. M. 26, Goldington-street, St. Pancras-road, Camden town, London.

TO BUILDERS AND CONTRACTORS.

WANTED, a SITUATION as CLERK of WORKS, or GENERAL FOREMAN, by a person who has just completed an engagement in the carrying out of some extensive works; can produce the first of testimonials.—Address, R. S. 2, Tower Royal, City.

WANTED, immediately, by a Builder in the Midland Counties, employing from 100 to 200 men, a CLERK, fully qualified in all the branches, for keeping accounts, measuring all works, taking out quantities, and preparing estimates; also capable of giving working drawings for workmen. References, age, and salary, to be stated to the parties applying.—Address, R. L. Office of "The Builder."

AS CLERK OF WORKS.

WANTED, by a respectable Man, a RE-ENGAGEMENT in the above capacity, in or near London. Good references given. Address, A. C. B. Office of "The Builder."

TO BUILDERS AND CONTRACTORS.

WANTED, by an experienced Builder's Foreman, a SITUATION as Walking or General Foreman, or charge of Works. Present engagement terminating shortly.—Address, J. P. Mr. Seward's, Undertaker, Bath-street, City-road.

TO MASTER BUILDERS AND HOUSE DECORATORS.

WANTED, by a Young Man, a PAINTER and GRAINER, a CONSTANT SITUATION. Wages 25s. per week. Address, J. W. Office of "The Builder."

STAIRCASE and HANDRAIL WORK.—The Advertiser, who is competent to undertake every description of the above, wishes for an ENGAGEMENT as LEADING HAND, or to take the work at fair price. The highest testimonials given. Address, JOHN WESTON, 8, South-row, Earl's-court, Old Brompton.

TO ARCHITECTS, &c.

AN Assistant a first-rate Draughtsman, accustomed to prepare finished and working drawings, superintending works, write specifications, and making surveys of dilapidations, wishes for an ENGAGEMENT, either temporary or permanent. No objection to the country.—Address, ARCHITECT, 35, Abergavenny-street.

A CLERK of WORKS, of great practical experience, is open to an ENGAGEMENT.—Address, A. L. 3, Water-place, Francis-street, Newington butts.

TO ARCHITECTS, &c.

AS CLERK of WORKS, the Advertiser, aged 38, is desirous of an ENGAGEMENT. Is fully competent to carry out the intentions of an architect in Gothic, Italian, or Elizabethan designs. Good reference.—Address, T. R. S. Post-office, Great Portland-street, London.

TO ARCHITECTS AND SURVEYORS

A GENTLEMAN is open to an ENGAGEMENT as Draughtsman or Assistant. Terms moderate.—Apply X. Y. Z. 17, Granby street, Hum, dent road

TO GLASS CUTTERS AND OTHERS.

A RESPECTABLE YOUTH, aged 18, wishes for a CONSTANT SITUATION, as Cutter and Glazier.—Address, W. H. J. 16, Long acre, London.

AS BELL-HANGER.—A respectable Young Man, who thoroughly understands his business, with a good reference, if required, from his last situation. Direct, P. W. 10, Harrison-street, Gray's-inn-road.

TO CIVIL ENGINEERS, LANDOWNERS, ESTATE AGENTS, SURVEYORS, AND OTHERS.

A SURVEYOR of many years' general experience, also having had considerable practice in civil engineering and architecture, and competent for the management of an office, or of works, is open to RE-ENGAGEMENT, at home or abroad, or to enter into partnership therewith, where capital is required.—Address, post-paid, W. J. Newspaper-office, 10, Tottenham court-road.

PARTNERSHIP.—A London Architect, well understanding Gothic design, with Practice in Country, wishes to purchase into an old established Architectural Business. None but those with good practice need apply.—Address, H. R. Office of "The Builder."

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on the COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Mill-pits, to offices on his own premises, at Carrara Wharf, Thames-bank, Pimlico, where he continues to carry on the marble trade solely on his own account.

Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE PLACE.

SAMUEL CUNDY,

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.

PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 18 Wharf, Micklefield-street, North, City-road, for the sale of GRILLE and other ornamental iron articles, useful, architectural, and ornamental, invite Architects, Builders, and the trade generally, to inspect the same. A large assortment of fancy articles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.

C. ADENEY, secretary.

July 25, 1855.

THE LIZARD SERPENTINE COMPANY manufacture and sell in blocks, slabs, the beautiful Stone now raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and ornamental works to any size, 29, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent to London.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble in Chimney Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble, Sculptured Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Alo's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Bed and Breakfast Rooms, Best and secondary Bed-Rooms, &c.; also Hall Pavements, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

TO SCULPTORS, MARBLE MASONS, and BUILDERS.—Now landing, from barges at Whitehall-wharf, ex *Conquest*, from Leghorn, part of a cargo of BLOCKS of fine SEA-GREY dove marble, VEIN and SICILIAN. Mr. FRANKLIN begs to call attention to the above, also to his extensive stock of marbles in books and slabs, consisting of statuary, vein and Sicilian, Irish Green and Black, Dove, Barbilla, Sienna, Brocatella, Rance Royal, St. Ann's, Emperor's Red, Black and Gold, &c. which he is enabled to offer on advantageous terms.

TO BE SOLD CHEAP, about 1,000 cubic feet of STONE BLOCKS, several 7 feet by 3 feet 6 inches, by 1 foot 2 inches thick; ditto, 6 feet to 7 feet, by 1 foot 6 inches, by 1 foot 2 inches; ditto, 3 feet to 6 feet, by 1 foot 6 inches, by 9 inches. Apply from TWELVE to ONE, at 34, Buckingham-street, Caledonian-road, Islington.—N.B. Can be viewed on the premises.

TO BUILDERS, BUILDING MATERIAL DEALERS, AND OTHERS.

TO BE SOLD by TENDER, a quantity of YORKSHIRE, PORTLAND, and GRANITE STONE, in slabs, blocks, and landings. Also a quantity of marble, about railway blocks, a quantity of granite curb and sundry other building material.—May be viewed on the premises, Cambridge-place, at SAUGHALL'S, No. 2, on MONDAY, the 27th, and TUESDAY, the 28th inst. from TEN o'clock to FOUR, and the Tenders to be sent to Messrs. SAUGHALL and SON, 34, Tottenham court-road, on or before WEDNESDAY, the 29th inst.

PORTLAND STONE.—NORTON and WHITLEY beg to solicit the attention of the building trade generally to their extensive STOCK of PORTLAND STONE, comprising every useful size, which they are now offering upon most advantageous terms. York Landings, Paving, Sills, Sinks, &c.—Address, 24 Wharf, Harrow-road, Paddington.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

This Paint possesses in an eminent degree the following advantages over all other known Pigments:—
INDESTRUCTIBILITY BY HEAT—PRESERVATION OF IRON FROM OXIDATION, WOOD FROM DECAY, AND MASONRY AND BRICKWORK FROM DAMPNESS—PERMANENCE OF COLOUR AND FREEDOM FROM DELETERIOUS PROPERTIES—SUPERIORITY OF BODY.

The Protoxide Paint, as at present produced, is of one shade of colour, viz.: Any Tint may be produced with any shade to suit the taste, but for which it may be required. It is not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind, and is therefore well adapted for the interior of Ships, Warehouses, Offices, Steamboats, &c.; and from its total freedom from deleterious properties it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.—Sole authorized Agents for England:—

MESSRS. C. GRABHAM AND CO. 4, BARGE-YARD, BUCKLERSBURY, LONDON.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to the heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Rendered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK LONDON PATENT. And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of this manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Pinsel-street, Paddington.

PORTLAND CEMENT.—6, South Wharf, Paddington. CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle by those who have hitherto had the monopoly. Manufactured by to all parts of the kingdom per boat or rail, at a reduced price to the trade.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. An count of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent. KNIGHT, BEVAN, and STURGE, trade. Portland cement is manufactured at these works with especial reference to its destination, whether for standing brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a non-setting Cement, requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Parian, White, Stucco, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grinding Stones, Cement Mortars, Chimney-pots, Quito Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour resembling the Bath stone.—CHARLES RICHARDSON, 6 South Wharf, Paddington.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT STOCK and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

SOUTHAM BLUE LIAS LIME and PORTLAND CEMENT WORKS—OLDHAM and TATHAM are now prepared to receive orders from the Contractors, Builders, and Merchants for Ground and Lump Blue Lias Lime, also for Portland Cement and Lias and Bath Cement, both of which will be found of very superior quality, and will be supported by the addition of two or more parts of sand to one of cement, 10 and 12 boats can run alongside any wharf or works, and all orders addressed to Warwick will receive prompt attention.—Office, Warwick

GREY STONE LIME WHARFS, 12, UPPER GROUND STREET, Blackfriars (Surrey side). 7, NORTH WHARF-ROAD, Paddington.

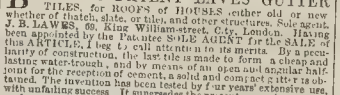
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.



SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, specially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, and in future all orders may be punctually attended to Orders for export, or along the Thames, canals, or railway stations, should be given a few days before required.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT in quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers. Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 69, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough, and by means of an open and angular halftained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting away from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvertoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "Reports of various eminent Authorities," page 201, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Corridors, Ball-rooms, &c.; Antique, Geometrical, and Adamantine Mosaics, manufactures of a highly decorative character, and Coverings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Panels, and Kitchen Ranges, may be had of their Agents at their Warehouse, 9, Alsop place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach Cambridgeshire, begs to offer pantiles at 35s. per 1,000; floor bricks and paving, at 4s. per 1,000 inch pavings, at 60s. per 1,000; Cash prices. Delivered on trucks in London on Eastern Counties Railway.

DUTCH CLINKERS, 32s. per thousand, by the best Makers.

WELSH STOURBRIDGE, AND NEWCASTLE FIRE-BRICKS, LUMPS, AND TILES, at much less than cost prices; will be SOLD by PRIVATE CONTRACT. The BUSINESS to be DISPOSED OF, with the valuable connexion, and a portion of the PREMISES to carry on the same, TO BE LET, at almost a nominal rent.—For particulars inquire on the premises, Hundaras Wharf, Bankside, Southwark, London.

BRICKS.—Excellent hard-burnt RED BRICKS, of deep colour and perfect shape, 28s. per 1,000, cash, delivered into the railway trucks or carts. Stocks, malms, fancy bricks to order. Agricultural draining tiles.—Address, Mr. LEVETT, at the Railway Brick and Tile Works, Brentwood, Essex, where a large stock may be inspected.

N.B.—The Works adjoin the Goods Station of the Eastern Counties Railway, at Brentwood.

BRICKS.—To Builders and Contractors.—Capital Hard-burnt GREY STOCKS, of good colour, GRISEES, and PLACE, at very reduced prices. Cash.—J. F. SMITH, Further Field, Acton Bottom, near Shepherd's Bush.

BRICKS, LIME, WHITING TILES, FLINTS, GRAVEL, &c.—Messrs MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on the usual terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail; any station on the Eastern Counties Line, or any railway connected with it. Also, which one trial of their supreme mass be saved. Also, lime, chalk, best quality, lime, both white and blue, for fire-goods, &c. can be obtained at Messrs MEESON's Wharf Kilns at Bow-bridge, by letter, to Messrs. MEESON and CO. Gray's, Essex. Orders, with despatch.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and Co. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea bridge, at the following prices, viz.:—Grey stocks, 25s. per thousand; Rough Stocks, 23s. per thousand; Grizzels, 20s. per thousand, Cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place Sand-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Countine-house, Hoxton Brickfields, Grouze-walk, near the Rosemary Branch, Hoxton.

N.B. Red-coloured Sand, fat for mould purposes constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS, COWLEY, KENT, and ESSEX BRICKS.

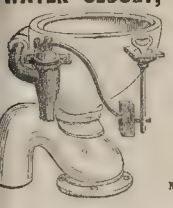
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE, 5, ADELAIDE-PLACE, London bridge.

Depôt, Agar Wharf, Kings-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Footway, Oldbury, near Birmingham. Agent.—Mr. J. UNWIN, Private Residence, 59, Nelson-square, Blackfriars-rd.



BRICKS.—Builders wanting Bricks of good colour, are solicited to call on B. PARKS, Lewisham, and see the quality at low prices. Cartage within six miles on the most reasonable terms. Red facing bricks at 30s. All kinds of tiles, paving bricks for oven buildings, silk glazed stone pipes manufactured; also all kinds of red pipes and pots.—Application by letter punctually attended to.

FOR IMMEDIATE SALE. — FIRE BRICKS, LUMPS, TILE, and TERRA COTTA.—SAMUEL THICKETT has received a large consignment of the above goods for sale. Apply at the premises Stone wharf, Isle of Dogs. Dealers and large consumers liberally dealt with.

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, at very low prices, a large quantity of very hard BUILDING BRICKS, TILES, and PAVING WARE; also, 3, 4, 6, 9, and 12 inch red Socket Drain Pipes, in perfect lengths. Apply to St. JOHN HEWITT, Redhill Works, Southampton.

CLAY ARCHITECTURE.—To NOBLEMEN, ARCHITECTS, BUILDERS, and OTHERS.—A PATENT has been taken out by JOSEPH ARNOLD, Tamworth, Blue Brick and Tile Manufacturer, for making ORNAMENTAL BRICKS, of any pattern, whatever, on a raised ground, with the accuracy as a seal upon wax. By this novel invention the pattern is made with the brick, the clay is prepared by steam power, which produces, when burnt, an impenetrable article. Ornamental window heads and sills, large bricks for plinths, and facings for polerals, common size bricks, grape and vine, Elizabethan, or any other pattern. The paste for the ground can be of red, or strawberry colour. His large paving bricks, 18 by 9 inches, and 2 inches thick, can be depressed in Mosaic patterns, to prevent slipping, and carry off the rains, only require being set on the flagging pow in use, be a great economy. For the foundations of large public buildings, Asylums, Government sheds, bricks are made 18 by 6 inches and 2 inches thick, weighing nearly 70lbs of this superior material. The time has now arrived when the exterior of our public and private buildings may equal, if not excel the interior decorations in the hands of architects, as there is no limit to design. The means of these articles may be seen in the Metallic Earth Works, on the Watling-street road, about a mile within three minutes' walk of Wilnecote Station, on the Midland Railway, and two miles from Tamworth Station, Trent Valley line.—Church-street, Tamworth, August 8, 1855.

WATER-CLOSET, WITH APPARATUS COMPLETE, FOR 13s. 6d.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

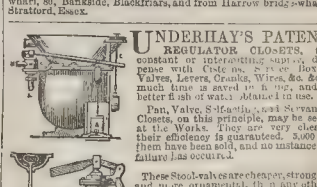
LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE
No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 10 to 200 feet, they are found to be exceedingly durable and much cheaper than common cocks. Manufactured solely by the Inventors,
THOS. LAMBERT and Co.,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.
NB. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 11s. 6d. each.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, moved by all to be of the best manufacture, by the improved clay, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and Co. Great Northern-wharf, York road, King's-cross.

STONEWARE GLAZED POTTERY, LYTCHETT, near POOLE, DORSET.—TO BE DISPOSED OF, by PRIVATE CONTRACT, the Lease, Plant, and Stock of the above Premises. The land contains a great depth of the finest clay, fit either for shipping or manufacture. The Glazed Drain Pipes and Fire Bricks are equal if not superior to any yet in the market.—Further particulars may be obtained on application to H. F. FISHER, Blandford, Dorset.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with stem, cranks, wire, lead traps, &c. Any number of Closets can be supplied from one main.



Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER CLOSETS, patronised by the Board of Health Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. PRICE for Closet and Apparatus COMPLETE FROM 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 39, Old Fish-street, near St. Paul's, London

CROWN GLASS, 18 TABLES, 42s. PER CRATE.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c.; Slates of the best quality for Roofing and Vessel Counts; Builders and others supplied with all information, on application to E. and W. STURGE, Bridge-wharf, City-road.
N.B.—The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made.
January, 1855.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on reasonable terms. Also, MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 89, Bankside, Blackfriars, and from Harrow bridge-wharf, Stratford, Essex.

UNDERHAY'S PATENT REGULATOR CLOSETS, for constant or intermittent supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Wires, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-cleansing, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.

These Stool-valves are cheaper, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of.

Manufactured by
CHARLES BUTTES and SON,
Brass Founders, Crawford passage, Clerkenwell, London.

SALES BY AUCTION.

MARBLE, &c.—TO BUILDERS, SCULPTORS, MARBLE MASONS, &c.

MESSRS. THOMPSON and HOLMES beg to inform the Trade that their PUBLIC AUCTIONS of MARBLE will take place on the following days:—
MONDAY, 3rd SEPT. 1855.
MONDAY, 8th NOV 1st
Catalogues and full particulars to be had on application one week before each sale—The Stores, MARBLE WHARF, Thames Bank, Pimlico, at the foot of VAUXHALL-BRIDGE.

NOTTING-HILL.—Long Leasehold Property, of the value of £90 per annum, to be sold by auction.

MR. D. A. RAMSAY is instructed to SELL by AUCTION, at the MART, on FRIDAY, SEPTEMBER 21st, at TWELVE, in four lots, a LEASEHOLD ESTATE, comprising four substantially erected family residences, containing twelve rooms each, being Nos. 21, 22, 23, and 24 Portland-road, of the extensive estate of Lord Ladbroke, held under lease for long terms at very low ground rents.—May be viewed, and particulars obtained of Messrs. Wyatt and Sons, Solicitors, 7, Great James-street, Bedford-row; at the Mart; and of Mr. D. A. RAMSAY, Auctioneer and Estate Agent, 79, King William-street, City.

MR. D. A. RAMSAY begs respectfully to announce to his numerous friends and the public, that he has RESUMED the BUSINESS of an AUCTIONEER, Valuer, Estate and Land Agent, and from his long practical experience of the value of property, feels great confidence in soliciting the support of his former patrons and friends, and in doing so begs to call their attention to the central position of his offices, and to assure them that all business entrusted to his charge shall be conducted with the greatest promptitude and despatch, and to their entire satisfaction. Mr. D. A. R. respectfully invites the attention of all parties having property for sale or to let, to furnish him with full particulars, when the same will be duly registered, free of charge—Auction and Estate Agency Offices, 79, King William-street, City.—Agreed 24 1855

HARROW-ROAD.—Leasehold Carcases, in Private Residences and Shops

MR. D. A. RAMSAY is instructed to SELL by AUCTION, at the MART, on FRIDAY, SEPTEMBER 21, at TWELVE, in six lots, SIXTEEN well-built CARCASES of twelve rooms each, with convenient fronts, situate in Belsize-crescent, Westbourne-park-villas, within three minutes' walk of the Paddington Station on the Great Western Railway, and over the Regent's Canal. Held on lease for a long term unexpired, at low ground rents. May be viewed, and particulars obtained in due time of Messrs. RHODES, LANE, and Manners, Solicitors, 62, Chancery-lane; at the Mart; and of Mr. D. A. RAMSAY, Auctioneer and Estate Agent, 79, King William-street, City.

TO CABINET, PIANOFORTE, BILLIARD-TABLE, BUHL, MARQUETRY, FANCY BOX AND BRUSH MAKERS.

MR. E. THOMAS will SELL by AUCTION at his GALLERY, No. 38, Leicester-square, on THURSDAY next, AUGUST 30th, 1855, at TWELVE o'clock, about 20,000 feet of VENEERS, comprising—
1,000 feet of Rose Wood Veneers.
1,400 feet of Walnut and Pollard Oak ditto.
1,800 feet of Tulip-wood ditto.
2,000 feet of Spanish Mahogany Curl ditto.
5,000 feet of Honduras and Spanish ditto, of rich figure and various sizes.
1,000 feet of Walnut Curl Veneers.
4,000 feet of small Walnut-burr Veneers, of splendid figure; and
One Plank of the richest Mottled Mahogany in London.
In lots of six veneers, cut by hand. Also Maple, Ash, and Satin-wood prepared Veneers for brush-makers, &c.—May be viewed the morning of sale, and catalogues had of Mr. E. THOMAS, Auctioneer, 38, Leicester-square.

TWICKENHAM.—To Builders and Persons desirous to build for their own occupation or as investments.—Valuable Land, with extensive frontage, and Two Ground Rents, amounting to 70l. per annum.—By Mr. MASON, at GARRAWAY'S, on TUESDAY, SEPTEMBER 25th.

FIFTY PLOTS of FREEHOLD BUILDING GROUND, delightfully situate, near the new church, Twickenham, a short distance from Pope's Villa; fourand a half acres open, with Wellesley House nearly adjoining Sir Wm. Clay's Park; two and a half acres are between the upper and lower roads; gravelly soil and good water; eligible for villa residences, with a railroad station half a mile distant. Also a well-secured rent of 18l. issuing from two houses, lately built on part of the estate, annual value, 70l.; and another ground rent of 32l. from a piece with 18 feet frontage, let to Mr. Legge, who is to erect a shop, value, worth 120l. a year.—May be viewed; and particulars of Mr. PENNY, at the Prince Albert. Particulars had of the Auctioneer, Nortonfalgate.

CAMDEN-TOWN CEMETERY.—BUILDING ESTATE—TO BE LET, on Building Leases for 99 years, very eligible SITES upon the above estate having good frontages into Camden-street, Pratt-street, and Buchanan-street. The rents are at present moderate, but will increase in the ratio of the locality, which is evidenced by its near proximity to the North-Western and North London railway stations, and the Hampstead road. Plans may be seen, and particulars obtained by application to Mr. KENDALL, Land Agent, &c., 17, Suffolk-street, Pall-mall East; or to JOHN DANGERFIELD, Esq. Solicitor, 293, Strand-street, Charing-cross.

LOWER THAMES-STREET.—TO BE LET, by Tender by the Worshipful Company of Armourers and Brazers, on a Lease for Twenty-one years from Midsummer, 1855, the extensive Premises known as the GLOBE-YARD WAREHOUSES situate in the above street, nearly opposite the Custom-house. The lessee will be required to pay all taxes and rates, including sewers and militia rates, and all assessments for sanitary purposes, and the expense of fire insurance, the land-tax being redeemed; and the lease will contain all covenants usual in the Company's leases. Sealed Tenders to be delivered at Armourers' Hall, Coleman-street, on or before the 3rd OCTOBER next, where a plan may be seen, and further particulars obtained the following day, at HALF-PAST TWO o'clock. The Company do not bind themselves to accept the highest or any other Tender.
JOHN PENTHEN, Clerk.
5, St. Andrew's-court, Holborn.

FREEHOLD LAND.—To BUILDERS or others.—Parties wishing to build Suburban Residences.—FREEHOLD LAND TO BE SOLD, on some of the most eligible building estates in the neighbourhood of London, viz.—
FOREST-HILL, Croydon Railway.
ST. MARGARET'S, Loyd's-road, South Western Railway.
OAKLANDS GRANGE, Weybridge, Surrey, ditto.
HOLNA-LAW, Maidenhead, ditto
TOTTENHAM GREEN, Eastern Counties Railway.
PUTNEY, South Western Railway.
RECTORY ESTATE, EALING, Great Western Railway.
The WADDINGTON ESTATE, ENFIELD, Eastern Counties Railway.
WOOD-GREEN, Green-lanes, Hornsea, Great Northern Railway.
OLD FORD, Stratford, Eastern Counties Railway.
Part of the purchase money may remain at 5 per cent. interest.
Parties assisted in the building of their own residences. Several Plots to be let on Building Lease. Money advanced to respectable parties.—Apply to Mr. GEORGE MORGAN, 3, Chancery-lane.

HAVERSTOCK-HILL.—To BUILDERS.—TO BE LET, in the MALDEN and QUEEN'S ROAD (both made roads), some commanding FRONTAGES for Shops and Private Houses. All the sewers are now in the estate, roads all formed, and now making. Term, ninety-nine years. Low ground-rents. Bricks supplied at a low price and liberal conditions.—Apply to Mr. JOHN MOORE, 8, Chalton-street, Euston-square.

BUILDING GROUND, with liberal CASH ADVANCES TO LET, at Old Ford, for the erection of Fourth-rate Houses, which are much required in this rapidly improving neighbourhood, and which let and sell rapidly. Cash liberally advanced as the buildings proceed. Term, 80 years. Ground-rent low.—For further particulars, apply to Mr. GEORGE CLARKSON, Surveyor, 48, Pentonville, Pentonville

TO BE LET, with immediate possession, a spacious WHARF and GRANARIES, an eight-roomed House, with stabling for twenty horses, and 100 feet frontage to the river Lea at Lowhouse, near the Commercial-road.—For particulars apply on the premises, or at Messrs. BRISTOW and TARRANT'S Offices, Bond-court, Walbrook.

POTTERY TO BE LET.—TO BE LET, with immediate possession, a POTTERY, at Packstone, near Poole, Dorset, standing on about an acre of land, with an abundant supply of excellent clay. There are two kilns, pipe-drying, and every requisite for the manufacture of stoneware; also a brick-kiln. Business may be commenced with a small capital. Apply to Mr. BRYANT, on the Estate, and at 107, Holborn-hill, London.

MAITLAND-PARK, HAVERSTOCK-HILL Hamp-tead road.—LAND-LAS REDEEMED TO BE LET, upon Building Leases for ninety-nine years, from Christmas 1852, desirable BUILDING SITES upon the above Estate. The continued demand for houses in this locality, and the picturesque position of the property adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves. For terms and to view plans apply to the Secretary of the Orphan Working School, 32, Ludgate-hill; Messrs. TERRELL and CHAMBERLAIN, 30, Bedford-street; the Architects, Messrs. WEBNERT and ASHDOWN, 29, Charing-cross; or at the Porter's Lodge, on the Premises.

TO BUILDERS and OTHERS.—TO LET, near St. Paul's a large old established BUILDERS' PREMISES, or the Lease TO BE SOLD, 20 years for the whole term for more than the rent, leaving the Yard, Workshops, Offices, &c. in hand.—For particulars inquire by post, of H. B. 14, Chatham-place Blackfriars

BUILDING FRONTAGE, STAINING-LANE, CITY.—The Haberdashers' Company are desirous of receiving TENDERS for the Site of their Old Chapel, fronting on Staining-lane, containing a frontage of 20 feet, and a depth of 74 feet. Tenders must be sent in not later than SATURDAY, SEPTEMBER 8th. Further plans may be obtained at Haberdashers' Hall, Gresham-street West; or of Mr. SNOOK, Architect, 6 Bakestreet, Southwark. JOHN CURTIS, Clerk.

FREEHOLD LAND TO LET, on BUILDING LEASES.—The Rev. WILLIAM FORD, and Mr. HENRY WEBBER, executors of RICHARD BARFORD, Esq. late of Tollington-park, have to offer TWO valuable Plots of FREEHOLD LAND for Building Leases, for a term of ninety years, in Barford-street, Liverpool-road, Islington. The land-tax is redeemed and the sewer is made.—For particulars apply to Mr. HENRY WEBBER, Timber-merchant, 31, Old-street, St. Luke's.

BUILDING LAND for SHOPS, opposite the New Cattle Market, TO BE LET. Liberal advances will be made.—For particulars apply to Mr. ABRAHAM BOOTH, Auctioneer and Estate Agent, No. 1, Carlton-hill Villas, Camden-road, opposite the Brecknock Arms.

WORTHY of NOTICE.—TO BE LET, situated in the Clarendon-road, Notting-hill, both sides of the road being built on, some BUILDING CARCASES, adapted for shops or private houses, at a low ground rent, no charge being made for the roads or for the road or sewer. Terms can be had direct from the freeholder. For particulars apply to Mr W PILBEAM, Builder, Talbot Inn, Clarendon-road, Notting hill

CHELSEA.—Town and country semi-detached Residence, free from noise or nuisance, and easy of access to the City. It Twenty Rooms; seven are 18 to 28 feet long, with 45 feet shed, and acre of well planted lawn and garden, not overlooked; all easily divided into two or three lots; gravelly soil. Rent 100l. reducible to 75l. by fine premium warranted worth double for investment and lease of three to eleven years, which may be extended to ninety. The long lease will produce a handsome profit on ground-rents, besides valuable materials, fixtures, and gravel, worth 200l.—Mr. ALFRED COX, Agent, 66, New Bond-street.

TO BE SOLD, TWO eligible PLOTS of FREEHOLD BUILDING LAND, with a frontage each 15 feet 2 inches by 91 feet deep, pleasantly situated at Peckham, contiguous to the Rye.—For particulars apply to Mr. ARCHER, 2, St. Leonard's-square, Maiden-road, Haverstock-hill.

SAFE and PROFITABLE SPECULATION. TO BE DISPOSED OF immediately, a very valuable BUILDING AGREEMENT direct from the freeholder, partly executed some of the houses are completed, and the whole including some Leases now in progress, together with the scaffolding, wood, stone, &c. The advertiser being engaged to another business at a distance requiring all his time, will deal liberally, regardless of the value, with a prompt purchaser.—Apply to Mr. GLAZIER, Auctioneer, 41, Charing-cross.

BUILDER'S PREMISES.—WANTED, in Westminster or the neighbourhood, Large PREMISES, a wharf preferred. A stock would be taken.—Address, stating full particulars, to D. A. M., Messrs. Widnell and Trollope, 9, Upper Charles-street, Westminster.

FREE RAILWAY TICKETS.—ENFIELD ESTATE.—IMPORTANT to BUILDERS.—The land of every house built upon it must be of the value of 40l. per annum, will be entitled to a Free First-class Railway Ticket; and of every house of the value of 25l. per annum, will be entitled to a Free Second-class Railway Ticket, for fourteen years.—Apply to Mr. GEORGE MORGAN, 3, Chancery lane

TO PLUMBERS, PAINTERS, GLASS-CUTTERS, &c. TO BE DISPOSED OF, an established CONCERN in the above line, in a first-rate situation, and doing a good trade. Domestic affliction is the cause of leaving. Premises easy.—Particulars of the Tyne Glass Company, Bridge-waterhead, Wilmington-street, Blackfriars.

ROYAL POLYTECHNIC.—Lecture on the New Metal, Aluminium, by J. H. Pepper, esq. daily, at 3 and 9. The largest bar yet produced, presented by the Emperor of France, on view.—Musical Entertainments, by G. Buckland, Esq. Monday, Wednesday, and Friday, at 7.45.—Transmission of Sound through Solid Substances, with Musical Illustrations, by Professor Wheatstone, Esq. Tuesday, Thursday, and Saturday, at 1.—Chambers Water, in the Microscope, daily, at 1 and 9.—Rose's Infernal Machines, at 3.45 and 8.45.—Relics of the Franklin Expedition, and Arctic Collection of J. Barrow, esq.—Dissolving Views of the Crimean Battles.—Diorama of Saint Rick.

LEVEL WANTED.—Wanted, a good 10, 12, or 14 inch DUMPY LEVEL, with Tripod and Inverted Staff complete.—Address, stating lowest price, to Mr. SLACK, 187, Piccadilly, London.

SWISS DRAWING INSTRUMENTS, of equal in quality to the very best London-made instruments, but considerably cheaper.—Apply to Mr. S. BARLOW, 9 Theobalds, Holborn (between 1 and 3 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's park.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Sole of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

All applications to be made to the Parish Clerk, Mr. HOGG, No. 6, Park-place-terrace, Paddington-green.

By order,

August 29, 1855. ROBERT FORD, Clerk to the Board.

CONTRACTS.

TO BUILDERS.

THE BURIAL BOARD of the PARISH of St. NICHOLAS, ROCHESTER, will meet at their Office, Common, Rochester, at TWELVE o'clock at noon on MONDAY, the 10th day of SEPTEMBER next, to receive TENDERS for the ERECTION and COMPLETION of an EPISCOPAL CHAPEL, a DISSENTERS' CHAPEL, a SEXTON'S HOUSE, and Boundary Enclosures, with Entrance gates, &c. on the site of the new burial-ground, situate on the Maidstone-road. The drawings and specifications may be inspected at the Office of the Board, on and after the 27th day of AUGUST instant, between the hours of TEN and FOUR. The Board do not pledge themselves to accept the lowest Tender. The contractor will be required to enter into security for the due performance of the work. No Tender will be received after TWELVE o'clock at noon on the said 10th day of SEPTEMBER next. By order of the Board,

Rochester, 9th August, 1855. RICHARD PRALL, Clerk.

WICKLOW HARBOUR.—NOTICE to CONTRACTORS.—The Commissioners for Improving the Harbour of Wicklow are prepared to receive TENDERS from competent parties for the EXECUTION of the under-mentioned WORKS, viz. CONSTRUCTING a PIER and BREAKWATER of TIMBER PILING and MASONRY, DREDGING out the BAR and CHANNEL to a depth of EIGHT FEET at low water, and to REPAIR the existing QUAY WALLS. The Contractors are to be executed and delivered up complete, according to plans and specifications prepared by HENRY BRETT, Esq. C.E. and which may be seen at the Office of the Secretary to the Harbour Commissioners, Wicklow; or by application to Mr. BRETT, Engineer, 4, Harrington-street, Dublin. The Tenders to be sent in, sealed and addressed to the Chairman of the Harbour Commissioners, on or before TWELVE o'clock, on MONDAY, the 17th of SEPTEMBER, 1855.—By order,

ROBERT HALPIN, Secretary to Harbour Commissioners.

Harbour Office, Wicklow, August 16, 1855.

BOROUGH of BIRMINGHAM.—To SURVEYORS and VALUERS.—The Assessment, Rate, and Appeal Committee of the Council, desirous of CONDUCTING to make a NEW VALUATION of all the RATEABLE PROPERTY within the borough. Surveyors desirous to Tender may inspect the specifications and obtain all necessary information on application at my office, on and after the 1st day of SEPTEMBER next. Sealed Tenders, marked "Tender for new Valuation," to be delivered to me on or before the 15th day of SEPTEMBER next. The Committee does not bind itself to accept the lowest or any Tender.

By order, THOMAS STANDRIDGE, Town Clerk.

Temple-street, Birmingham, August 25, 1855.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives Notice, that sealed TENDERS, addressed to the DIRECTOR GENERAL of CONTRACTS, will be received at the office of Ordnance, Pall-mall, on or before the 10th SEPTEMBER, 1855, for the ERECTION of a MILITARY PRISON, OFFICERS' and BARRACK MASTERS' STORES, &c. at the Wellington Barracks, St. James's park. The specifications and plans of the above service may be seen, and forms of Tender may be obtained, at the Royal Engineer's office, 11, James-street, Buckingham-gate, between the hours of TEN and THREE o'clock, from the 27th AUGUST to the 9th SEPTEMBER, 1855. The Ordnance Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineer's Office, London District, 23rd August, 1855.

ORDNANCE CONTRACT.—NOTICE to BUILDERS and EXCAVATORS.—Sealed TENDERS, addressed to the Director-General of Contracts, Ordnance Office, Pall-mall, London, and endorsed, "Tenders for Excavating Work at Aldershot," will be received on or before TWELVE o'clock noon on FRIDAY, 7th SEPTEMBER next, from parties willing to CONTRACT for the supply of LABOURERS, HORSES, CARTS, and DRIVERS, required from time to time in forming roads and similar work at the camp at Aldershot, Hants, from the date of the acceptance of the Tender to the 31st March, 1856. Specifications, forms of Tender, and all further information may be obtained on application at the Royal Engineer's office, Aldershot.—Royal Engineer's Office, Aldershot August 24, 1855.

Royal Engineers' Office, Portsmouth, 30th August, 1855.

TO BUILDERS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 24th day of SEPTEMBER, 1855, from such persons as may be willing to enter into a contract with the Ordnance for the ERECTION of proposed OFFICERS' QUARTERS, MESS ESTABLISHMENT, and SOLDIERS' PRIVIES, at Winchester Barracks, county of Hants, agreeably to the plans and specification to be seen, (or applying at the Royal Engineers' Office, Portsmouth, every day (Sundays excepted), until the 22nd day of SEPTEMBER, 1855, and where also forms of Tender may be obtained.

N B The Ordnance reserve to themselves the right of rejecting all or any of the Tenders.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Commanding Royal Engineer's Office, Dublin, 28th August, 1855. The principal Officers of Her Majesty's Ordnance hereby give Notice, that they will receive PROPOSALS for the following CONTRACT, viz.:—For the CONSTRUCTION and ERECTION of PROPOSED BUILDING, to contain Steam Washing and Drying Apparatus, with out for Manner and Engineer, at the temporary barracks on the Curragh of Kildare, in the Dublin district. Persons desirous of Tendering for the same will receive every information on application at the Commanding Royal Engineer's office, Lower Castle-yard, Dublin, and may obtain specifications, with the terms of contract, upon making a deposit of 1*l.* for the same, which deposit will be repaid when the specifications are returned uninjured. The whole of the work to be completed within one hundred days after the acceptance of the Tender. The letter of Tender to be sealed, and transmitted, under cover, to "The Director General of Contracts, Ordnance office, Pall-mall, London," so as to be received on or before the 12th day of SEPTEMBER, 1855, and to be marked on the outside, "Tender for Work at the Curragh of Kildare."

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London district hereby gives Notice, that sealed TENDERS, addressed to the Director General of Contracts, will be received at the Office of Ordnance, Pall-mall, on or before the 11th SEPTEMBER, 1855, for RAISING the BUILDINGS over the Riding school) a story, west boundary, at Regent's park barracks. The specifications and plans for the above service may be seen, and forms of Tender obtained, at the Royal Engineer's Office, 11, James-street, Buckingham, between the hours of ELEVEN and THREE o'clock, from the 3rd to the 7th of SEPTEMBER, 1855, inclusive. The Ordnance Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineer's Office, London District, 31st of August, 1855.

NOTICE to BUILDERS.—The Commanding Royal Engineer in the London District, hereby gives Notice, that sealed Tenders, addressed to the Director General of Contracts, will be received at the Office of Ordnance, Pall-mall, on or before the 12th SEPTEMBER, 1855, for OPENING DOWN, and FIXING the necessary GAS PIPES and FITTINGS to the several BUILDINGS at the TOWER of LONDON. The specifications and plans for the above service may be seen, and forms of Tender obtained at the Royal Engineer's Office, Tower, between the hours of ELEVEN and THREE o'clock, from the 3rd to the 8th of SEPTEMBER, 1855. The Ordnance Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineer's Office, London District, 31st August, 1855.

Royal Engineer's Office, Portsmouth, August 28, 1855.

TO BUILDERS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 24th of SEPTEMBER, 1855, from such persons as may be willing to enter into a contract with the Ordnance for the ERECTION of proposed TANKS, with supply pipes, pumps, &c. at Albany Barracks, Isle of Wight, agreeably to the plans and specification to be seen by applying at the Royal Engineer's Office, Portsmouth, every day (Sundays excepted), until the 22nd day of SEPTEMBER, 1855, and where also forms of Tender may be obtained.

N B. The Ordnance reserve to themselves the right of rejecting all or any of the Tenders

TO IRONFOUNDERS.

THE GERANT of the ANGLO-ROMANA GAS COMPANY requires TENDERS for about 200 TONS of CAST-IRON PIPES.—Specifications to be obtained at the Offices of the Company, No. 1, New Broad-street, London.

CONTRACTS.

TYNEMOUTH LOCAL BOARD of HEALTH.—SEWERAGE.—TO CONTRACTORS, EXCAVATORS, EARTHENWARE PIPE LAYERS, & OTHERS. The Local Board hereby give Notice, that they are prepared to receive TENDERS from persons willing to undertake either of the following CONTRACTS:—

CONTRACT No. 3.—For EXCAVATIONS and LAYING SEWER and DRAIN PIPES; also for the CONSTRUCTION of BRICK SEWERS, CULLIES, MANHOLES, and other WORKS, in the District of TYNEMOUTH

CONTRACT No. 4.—For EXCAVATIONS and LAYING SEWER and DRAIN PIPES; also for the CONSTRUCTION of BRICK SEWERS, CULLIES, MANHOLES, and other WORKS, in the District of NORTH SHIELDS.

The drawings and specification may be examined on and after THURSDAY, the 23rd instant, and duplicate forms of Tender, Schedules, and Bills of Quantities as the case may be obtained, together with any further information required, on application at the Town Surveyor's office, North Shields; or at the Offices of ROBERT HAWLINSON, C.E. 34, Parliament-street, Westminster.—Sealed Tenders, to be delivered at the Town Clerk's office, North Shields, before TWELVE o'clock on THURSDAY, the 4th day of SEPTEMBER next, endorsed "Tender for Contract, No. 3 or 4," as the case may be.

(Signed) THOMAS C. LIETCH, Town Clerk.

North Shields, August 16th, 1855.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS. The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 4th day of SEPTEMBER instant, at ONE o'clock precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING down certain IRON PIPES, and to execute other Works in connection therewith, in extension of the Battle-bridge Outlet, Mid'ing, Tooley-street, Southwark, and for the maintenance of such Works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, to either with the form of Tender, may be inspected, and other particulars obtained at the principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE A.M. and FOUR P.M. on and after MONDAY, the 27th day of AUGUST instant, until MONDAY, the 3rd day of SEPTEMBER next. The Commissioners do not bind themselves to accept the lowest or any Tender; but the party whose Tender shall be accepted, will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho square.

Dated this 22nd day of August, 1855.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS. The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 11th day of SEPTEMBER next, at ONE o'clock precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN certain IRON PIPES, and to execute other works in connection therewith in extension of the Arnold Outlet, near Waterloo-bridge, in the County of Surrey; and for the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, to either with the form of Tender, may be inspected, and other particulars obtained at the principal Office of the Commissioners, No. 1, Greek street, Soho-square, between the hours of NINE A.M. and FOUR P.M. until the 10th day of SEPTEMBER next. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works No Tender will be received after the hour above mentioned. E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square.

Dated this 30th day of August, 1855.

METROPOLITAN COMMISSION of SEWERS.—TO BE SOLD by PRIVATE CONTRACT, a TIMBER-BUILT ERECTION, with the fixtures attached to the same, situate on the premises, No. 19, Whitehall-place. The erection consists of two stories, weather boarded outside, and roughly and headed inside, with a roof covered with slating.—The same may be viewed on application on the Premises, No. 19, Whitehall place, between the hours of TEN and THREE o'clock. Written Tenders to be delivered at the Principal Office of the Metropolitan Commissioners of Sewers, No. 1, Greek-street, Soho, on or before TUESDAY next, the 4th SEPTEMBER, at ELEVEN o'clock in the forenoon, after which hour no Tender will be received.—Dated this 30th day of August, 1855.

E. H. WOOLRYCH, Secretary.

TO BUILDERS.

BRISTOL ACADEMY for the PROMOTION of the FINE ARTS, and BRISTOL SCHOOL of PRACTICAL ART.—NEW BUILDING.—Persons desirous of sending in TENDERS for the various ARTIFICERS' WORKS required to be done in the proposed new buildings, may see the drawings and specification on application at the Room of the Academy, 44, Augustus's-parade, or, on and after MONDAY next, the 3rd instant, where they may be seen daily from NINE a.m. to FIVE p.m. Tenders, either general or separate, are to be addressed to the Building Committee, and sent in on or before MONDAY, the 3rd instant, not later than TWO p.m. The Committee do not bind themselves to accept the lowest or any Tender. Any further information required may be had of the Architects, C. UNDERWOOD, Chesterfield-buildings, Clifton; J. H. HIRST, St. Nicholas-chambers, Bristol.

HENRY HILL, Hon. Sec. Fine Arts Academy.

Bristol, Aug. 9th, 1855.

[For remainder of Contracts see next page.

CONTRACTS.

BRISTOL LOCAL BOARD of HEALTH.—TO BUILDERS, CONTRACTORS and OTHERS.—The Committee of the Bristol Local Board of Health ordered to give notice that they are ready to receive TENDERS from parties who may be willing to CONTRACT, together or SEPARATELY, for LAYING DOWN, CONSTRUCTING and COMPLETELY FINISHING certain intended BRICK SEWERS, in the parish of Bedminster, as follows viz:—Main Sewer No. 1, from Mill-lane, along Fair-street, to Bargecourt, about 228 yards in length; from Mill-lane, along East-street and West-street, to Alma-house, about 1,188 yards in length; Main Sewer No. 3, from Parson-street to the river Avon, about 2,670 yards in length. And persons proposing to enter for the making of the said Sewers are requested to leave Tenders for the same at the Office of the Local Board of Health, No. 13, Prince-street, on THURSDAY morning, the 30th day of SEPTEMBER next, at ELEVEN o'clock precisely, at which time an interview will be had with the Contractors upon the Tenders then become open, as to the several lines of Sewers and the mode for the execution, and the plans, sections, and specifications of the works to be also then and there produced. Sealed Tenders, addressed to the Clerk, No. 13, Prince-street, Bristol, and duly further addressed to be left or sent by post as hereinafter mentioned, to be delivered or posted, addressed to the Surveyor, at Bedminster, aforesaid. The parties tendering will be required to give the names of two responsible persons as their sureties for the due performance of the works. The Committee will not be bound to accept the lowest or any Tender, but will recommend the acceptance of the Tender which they may consider most eligible. Plans, sections, and specifications may be seen at the Office of the Surveyor, at Bedminster, aforesaid, on and after THURSDAY, the 23rd day of SEPTEMBER next. No Tender will be received after the hour appointed for the opening thereof. Each Tender must be accompanied by a letter, signed by two responsible persons, engaging that they will become bound with the Contractor, in the sum of £1,000 each, for the due performance of the contract. By order of the Committee,

JOHN G. HEAVEN, Clerk

Local Board of Health Office, 13, Prince-street, Bristol,
August 16, 1855.

BOROUGH of READING LOCAL BOARD of HEALTH.—To CONTRACTORS, ROAD MAKERS, SCAVENGERS, and OTHERS.—The Local Board of Health for the above Borough are desirous of receiving, in the month of October next, TENDERS for the PAVING, REPAIRING, and MAINTAINING the ROADS, for WATERING and SCAVENGING the same, and for EXECUTING other WORKS within the said Borough, for the period of SIX YEARS from the 1st day of OCTOBER next. Persons desirous of tendering for the same, can obtain the specification at the Office of Mr. J. B. CLARK, Surveyor to the Board, No. 1, Broad-street, Reading, after TUESDAY, the 11th INSTANT, between the hours of TEN and FOUR o'clock. Sealed Tenders, indorsed "Tender for Highways &c.," to be sent to me before SATURDAY, the 8th day of SEPTEMBER next. The Board will not bind themselves to accept the Lowest Tender. By order of the Board,

THOMAS ROGERS, Clerk.

10, Friars-street, Reading, August 14th, 1855.

BRAINTREE CEMETERY.—To Builders and others. The Burial Board for the Parish of Braintree, in the county of Essex, are desirous of receiving TENDERS for BUILDING, ERECTING and COMPLETING, TWO CHAPELS, ENTRANCE LODGE, and GATES, at their new Burial ground. The plans, specifications, and estimates may be seen at the office and of the officers of the Vestry, of JOHN JOHNSON, Esq., No. 8, Winsell-st, Bayne Edmonds, of whom further particulars and blanks of printed forms of tender may be obtained. Such Tenders as choose to send in, must send Tenders for Cemetery Works" to be sent free, to or before THE ABOVE-named day, on or MONDAY, the 24th day of SEPTEMBER next. The Board will require approved security for the due performance of the contract, but do not pledge themselves to accept the lowest or any Tender.

A. CUNNINGTON, Clerk to the Board.

Braintree, August 28, 1855.

TO BUILDERS.

THE BURIAL BOARD of the PARISH of BUCKINGHAM is desirous to receive TENDERS for BUILDING TWO CHAPELS, a LODGE, and RECEIVING-HOUSE, on the new burial-ground. The plans and specification may be seen at the Clerk's Office, in Buckingham, and Tenders must be sent to him on or before TUESDAY, the 4th day of SEPTEMBER next, to be laid before the Board at the meeting the next day. The Board does not bind itself to accept the lowest or any Tender.

GEO. NELSON, Clerk to the Board.

Buckingham, August 16, 1855.

TO BUILDERS.

PERSONS desirous of TENDERING for ADDITIONS to be made to the "SUN" PUBLIC-HOUSE, Southwark-bridge-road, can see the drawings and specification on the Premises, by application to the landlord, Mr. WILLIAMS, on TUESDAY next, SEPTEMBER 4. Tenders to be delivered on or before SATURDAY, the 8th SEPTEMBER, 1855. No pledge is given to accept the lowest or any Tender.

TO CONTRACTORS and OTHERS.—For SALE, two excellent NARROW GAUGE LOCOMOTIVE ENGINES, on 3-inch rails, now at work.

No. 1. A FOUR WHEELED COUPLED ENGINE, by Banks. Diameter of wheels, 5 feet 3 inches; cylinders, 13 inches; stroke, 20 inches.

No. 2. A FOUR WHEELED COUPLED ENGINE, by Hawthorne. Diameter of wheels, 3 feet; cylinders, 11 inches; stroke, 20 inches.

The above Engines are being disposed of owing to the near completion of the contract. Further information can be obtained from JOSEPH FIRBANK, Contractor, Newport, Monmouthshire.

TO BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for the ERECTION of a FARM HOUSE on a farm called Highway Farm, near Maidenhead, Berks, may see the plans and specification at the Office of Messrs. DENTON and DRAKE, 2, Parliament-street, Westminster, and at the Office of T. P. WARD, Esq., Maidenhead, on and after the 1st of SEPTEMBER. Tenders to be forwarded to Messrs. DENTON and DRAKE on or before the 17th SEPTEMBER, 1855.

TO BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for the ERECTION of a FARM-HOUSE and HOMESTEAD, and also TWELVE DOUBLE COTTAGES, all in the parish of St. Giles in the county of Dorset, for the Right Hon. the Earl of Shaftesbury, may see the plans and specifications at the offices of Messrs. DENTON and DRAKE, 2, Parliament-street, Westminster, or at the Bull Inn, St. Giles, Dorset, on and after the 1st of September. Application may also be made to H. W. WATERS, Esq., of St. Giles. Tenders to be forwarded to Messrs. DENTON and DRAKE on or before the 22nd of SEPTEMBER, 1855.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the Association and other Filters at trade prices. These filters, one, two, three, and four guineas each, yielding 60, 120, 180, and 240 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

212 MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporising) with all the improvements, under their Quadruple patents of 1854 and last month, and their Gun-proof Steel Locks. These are the STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.

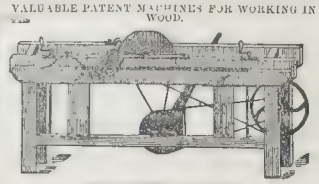
MILNER'S PHŒNIX SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 7, London-st., Fenchurch-st., London. Manufactory, Cable-street, Liverpool.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.—To be had, at FREEND'S IRONMONGERY WAREHOUSE, 58, Church-street, Bethnal green:—Self-acting Cottage Ranges, 20 in 28s.; 22 in 30s.; 24 in 35s. each; Registers of Stoves, 5d. per inch; Elliptic ditto, 9d. per inch. Floor Brads, sheet, 12s. per cwt.; Lath Nails, 11s. 6d. per cwt. Clasp Nails, 9 in 15s.; 8 in. 14s.; 6 in. 12s. 6d.; 5 in. 12s. 6d.; 4 in. 12s. per cwt. Sash Line Patent, No. 4, 6s. 6d.; No. 5, 8s.; No. 6, 9s. 6d. per gross. Cut Tacks, 4s. per cwt.; Sprigs, 6s. per cwt.

Terms net cash, on or before delivery.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE, Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Iron Boats, and STEWART'S PATENT CONSTRUCTION of SCREW and WATER PIPES

Office, No. 7, Sise-lane, London.



LARK'S PATENT SMOKE-BURNER: an improved means of effecting Combustion, and thereby preventing Smoke.

This invention is now in operation upon Steam engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted for other descriptions of Furnace, as Iron Melting Furnaces, Coke Ovens, Brewers' Coppers, Glass Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant for saving the public Nuisance, and in many instances with a diminished consumption of fuel.

The furnaces, of any construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BEDFORD, and SONS, Pimlico, London.

Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

SASH AND MOULDING MACHINE.

PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used by each of the United Kingdom, by joiners, cabinet-makers, coach builders, railway carriage and wagon builders, mangle, patent curd mill, and pump makers, shipbuilders, and also by the British and French Governments, for planing and dressing, moulding, tenoning, mortising, sawing, and boring. Their operations are in every respect perfect, either in solid or veneered work, and will perform all the ordinary description of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost. Sold only by WILLIAM FURNESS, Patentee, 29, Lawson-street, Liverpool, from whom full particulars may be obtained.

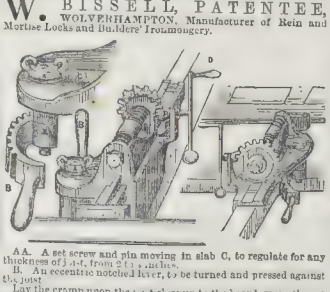
IRONMONGERS AND MANUFACTURERS,
53, 54, 55, & 57, WYCH-STREET, STRAND

LOCKS, HINGES, HANDLES, BOLTS, &c.



Paris Exhibition, No. 1717

Also Specimens at the Crystal Palace, Sydenham.

Illustrated Price-catalogues on receipt of four postage-stamps.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES

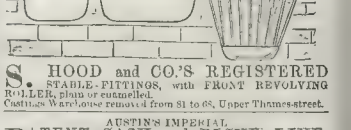
W. BISSELL, PATENTEE, WOLVERHAMPTON, Manufacturer of Rein and Mortise Locks and Builders' Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of slab, from 2½ inches.

B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then let the set screw rise. Turn the notched lever B against the joist, then by taking the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that he can supply a well-suited cramp for doors and sashes of all sizes. From its superior mechanical principle, it has a greater power, and will bind more quickly and safely used than any yet brought out, and at the same time it is light and portable.

KIMBERLEY'S PATENT FLOORING CRAMPS, Self-fixing



Brackets, Door Springs, Mitring Machines, Cement Pasteers and Stays, Skylight Screws, &c. &c. Also, KIMBERLEY'S PATENT GAS STOVES, may be had from any Ironmonger in town or country; from the Patentee, Inge-street, Birmingham; or of him in the London Agents, Messrs. PUGH and CO., 14, King-street, Snow-hill, where a stock is kept.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER-TROUGH in ONE FIXTURE; they were universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well-managed stable should be without these articles. Economy, durability, appearance, cleanliness, safety, and rest to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's Improved Mangers. May be had either plain, galvanized, or enamelled. Every article for the harness room and stable kept in stock. — Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2 Winsley-street, Oxford-street.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plans or counselled.

Castings Warehouse removed from 81 to 68, Upper Thames-street.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE, can be obtained of all ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY. Established 1774.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, and the Institution of Builders, &c. to the Stock or Ironmongery, Brass Foundry, Nails wrought and cast, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnishers of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. &c. &c. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Shaftesbury-street, Clare-market, London.

No. 1081, Class 6, Section 16 BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof constructions, even for ordinary dwelling-houses and domestic buildings, within the reach of everyone.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat. COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"GENTLEMEN,—We have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you 13 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edges.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.

W. R. HARTLEY, manufacturer of Girders, Columns, Chaffelers, Sash and Railing Bars, Panels, Iron Piers, Hot Plates, Tank Plates, Area Coverings, Sash Weights, Pig and Bar Metals, Rolling, Planing, Lathe and Light Castings, Iron Backs, Cheese Bars, Rams, Tubs, and other Castings, to patterns or drawings.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

SKAIFE'S GALVANIZING WORKS,

COMMERCIAL-ROAD, LIMEHOUSE, LONDON.

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form.—Sheets plain and corrugated.—Roofs fixed complete.

J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles.

AN ALLOWANCE TO THE TRADE.

THE LIVERPOOL AND MANCHESTER

PATENT GALVANIZED CORRUGATED IRON WORKS,

AND IRON ROOFING MANUFACTORY.

Head Offices: 18, JAMES-STREET (late the Coalbrookdale Company's Premises), LIVERPOOL,

Where all Letters are requested to be addressed.

FRANCIS MORTON AND CO.

Beg to inform ENGINEERS, CONTRACTORS, and the PUBLIC that they have increased their manufacture of Corrugated Iron by the purchase of the machinery and all the working dies of the late firm of Messrs. PORTER, BROTHERS, and STUART, of BIRMINGHAM.

Parties accustomed to use the PARTICULAR SIZES of Corrugations heretofore manufactured by that Firm can be still supplied with the same sizes from the same dies.

FRANCIS MORTON and CO. manufacture now a greater variety of Corrugated Iron either galvanized or black, than any other house in the trade, comprising every intermediate size from 2 inches up to 6 inches each corrugation, in all lengths up to about 11 feet; also the angular or step corrugation.

STRONG PLATES CORRUGATED EXPRESSLY for FIRE-PROOF FLOORS, ROADWAYS, BRIDGES, PARAPETS; also for ALL KINDS of ROOFING, RAILWAY WAGGONS, &c.

All kinds of GALVANIZED SHEET IRON ditto, expressly prepared for Tinmen's use; General Ironmongery and Iron Goods in stock, or galvanized to order.

The Trade supplied wholesale with Galvanized Water-buckets, Wire, Poultry, and other Netting, of every size, Best and Charcoal Wire, of all gauges; Wove Wire for Ventilation, &c.; Galvanized Water-pipes, Eaves Gutters plain and moulded, Gas Tubing, much cheaper and more durable than lead; Water Cisterns, Wire Ropes, Window-sash Cords, Signal Cords and Pulleys; Copper Rope Lightning Conductors, with Points and Attachments, complete.

Fencing Wire and Telegraph Wire, in long lengths.

The inventors of the PATENT WIRE STRAND FENCING, which is supplied and erected complete, at per yard.

Wrought-iron FIELD GATES, CATTLE and SHEEP HURDLES, and DEER FENCING of every description.

The PATENT ASPHALTED ROOFING FELT, at 1½ per square foot. Dry-hair Felt for Deadening Sound, for Boilers and Steam Pipes, made in rolls 20 yards long, at a greatly reduced cost.

Contractors for all kinds of Wrought and Cast-iron FENCING, PALISADES, ENTRANCE-GATES, and VERANDAHS.

Ships fitted with Wire Rope Rigging, Galvanized Chains, Anchors, &c.

THE TRADE SUPPLIED ON LIBERAL TERMS

Head Offices: 13, JAMES-STREET (late Coalbrookdale Company's Premises), LIVERPOOL;

Also 18, ST. MARY'S-GATE, MANCHESTER.

N.B. All kinds of Iron and Ironwork Galvanized, and Sheet-iron Corrugated at very moderate prices.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Kings-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Screwing, and Moulding Wood. They have constantly on hand Machines either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world, with their Machines for home and foreign use.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', DOWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 28 Watling-street, City, and see it, actout this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing the three separate kinds of work by one machine, and as it is self-feeding, it does not require any skill or care in using like the other inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS.

Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.

IRON ROOFS.

Patent Corrugated, Galvanized, and Painted, Wrought-iron, principal, Glass and Slated Roofs, to any span.

Wrought and Cast Iron Bridges, Girders, Fire-proof Floorings, Shutters, Doors, &c.

Engineers' and Builders' Castings of all kinds manufactured by JOHN WALKER.

Builder, Contractor, and Ironfounder, Millwall, Poplar.

Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.

N.B. Galvanized and painted Sheet Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

PATENT GALVANIZING and CORRUGATING IRONWORKS (Improved Process).

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbrook's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

THOMAS EDINGTON, PURCHASER and INSPECTOR of CASTINGS on COMMISSION, 17, GORDON-STREET, Glasgow.

OLD CAST-IRON TANKS or TANK- PLATES WANTED.—The Tanks may be of any shape except circular.—Tenders, stating full particulars as to size and thickness of the Plates, and the price per Ton, to be addressed to PRICE'S Patent Candle Company, Belmont, Vauxhall, London.

WANTED, a SUPPLY of SECOND-HAND TRAM-RAILS.—Address, quoting description and price, to RANDELL and SAUNDERS, Corsham, Wilts.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron bridge.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by P. EDWARDS, SON and CO. 42, Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED ECONOMIC STOVE, the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be seen their new engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. (opening to the Monument), London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

BY HER MAJESTY'S ROYAL LETTERS PATENT, APRIL 27, 1855.

JAS. LEWIS'S PATENT STENCH- TRAP.
FOR STREET USE.
Price, with Gutter Plate, 13 inches by 12 inches, each 25s.; weight about 2 cwt. Larger sizes made, if required.
FOR AREAS, &c.
Price, with Back Plate, 6 inches by 7 inches, each 6s.
FOR COURTS, YARDS, &c.
10 inches by 8 inches, each 10s.
The above articles are protected for the Patentee by the British Government, on account of their construction, for the advantages they possess, being a perfect trap for preventing smell proceeding from itself or the drain, should there be water or not in the pan. When stench-traps are put down generally speaking no attention is ever paid to them afterwards—this renders them useless. The above, therefore, are a desideratum, as they require no attention. It is well known that cholera has visited this country, it commences and leaves last those places where the air is vitiated by choleraic gases proceeding from drains, &c.
Any inhabitant suffering any inconvenience, is entitled, by the Sanitary Act to lay complaint before the public or private authorities of the property, to lay down stench-traps where they are required. Any persons interested in this advertisement will be kind enough to write to the patentee for drawings, and if wanful, testimonials. Please order from any respectable ironmonger, contractor, or (the Patentee, JAMES LEWIS, Ironfounder, Aberavenny. Specimens to be seen in the Court of Inventions, Crystal Palace, Sydenham

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the following greatly reduced prices:—

Pine Planks, 12 ft. 3 in. by 11 in.	from	3s. 6d. each.

Ditto ditto, in planks and boards	,,	0s. 6d. ,,
Spanish ditto	,,	0s. 7d. ,,

Prepared Flooring, Veneers, &c. at equally low prices. A list forwarded on application.
Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry Flooring at low prices, Southwark-bridge Wharf, Bankside.

A CORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and cut deals, slating battens, laths, English oak timber, and cash sills, at reduced prices for cash. The Monthly Price Current forwarded on application

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Bills, Mouldings prepared by Machinery, Laths, &c.—Apply at E SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

SEASONED FLOORING.—GEO. NOKES and CO. (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—

¾ inch White, 13s. 6d. per square.			¾ inch Yellow, 15s. per square.		
¾	ditto	15s.	¾	ditto	16s. 6d. ,,
1	ditto	18s.	1	ditto	20s. ,,

Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.
ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH BOARDING of all descriptions. Also an extensive stock of Dry White, Yellow, and Pine Cut Stuff, Slating, Battens, Pantile Laths, Oak Plank, Sash Cills, &c. Timber of all kinds, Planks, Deals, and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

FINE NAVY OAK TIMBER, Billingbear-park, Wokingham, Berks.—TO BE SOLD by PRIVATE CONTRACT, about 146 TREES, recently felled, very large, and of good quality, convenient for railway or water carriage. May be viewed by applying to JAMES GROVE, Pond-wood Cottage, Wokingham, Berks, and particulars and price known on application to Messrs. NOCKOLDS and KING, Saffron Walden, Essex.

UNIVERSAL MOULDING-MILLS, 24, Portobello-road, Notting-hill.
WILLIAM LEE, having commenced business at the above Premises as Moulding Manufacturer, with the latest improvement in machinery by C. Chambers, begs to offer to the Public, Architects, Builders, &c. his new and fashionable designs for Architraves and Slitting Mouldings, of which only a trial is required to gain their patronage and support. Also, that all goods manufactured by the said W. L are of the best seasoned timber, and at such a price and quality as not to be surpassed by any other house in the trade.—N.B. All customers having an account at the above establishment can be supplied with moulding to their own design, at the shortest notice, free of any extra charge.

NOTICE.—IMPROVED WOOD MOULD- ING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments, tombs, and every description of marble and stone work also manufactured by patent machinery. NEW WORKS, No. 20, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 100 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by enclosing six postage-stamps. Please note the address 20, BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

MOULDINGS by MACHINERY, to any Design, carefully packed and sent to all parts of the country.—Address, E. SIMMS, Sawing, Planing, and Moulding Mills, King's-road, Chelsea, and Wilton-road, Pimlico

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprize the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery executed by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

PADDINGTON TIMBER-YARD.— SAWING, PLANING, and MOULDINGS.—3, Irongate Wharf, Praed-street, Paddington, and 96, St. John's-wood-terrace, St. John's-wood.—GEORGE WILLIAM FRY begs to draw attention to his large stock of SEASONED and PREPARED WOOD GOODS, at the lowest current prices. Liberal allowance for cash, and facility for immediate despatch by rail or canal which affords every advantage to country as well as town buyers. Illustrated and priced sheets of moulding designs and general price lists of goods forwarded post free on application. Goods free to any part of town, including the various railway and canal stations.
N.B.—Sawing and planing for the trade.

STEPHENS'S STAINS for WOOD.
Testimonial to the value of:—
"Northgate, Colchester, February 5, 1855.
"Sir,—I have just finished a new church with your oak stain, and I consider it the best adapted for the purpose, being the nearest approach to the real wood of any I have ever used.
"I am, sir, your obedient servant,
"SAMUEL GRIMES, Builder.
"To Mr. Hy. Stephens, 84, Stamford-street, London."

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, fetched away and paid for at the time, at LEETWICHS' Lead, Glass, and Colour Warehouse, 31, Munster-street, Regent's-park.—A large quantity of PAPER-HANGINGS, CHEAP. 18s. per cwt. given for old lead.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

PLATE-GLASS for GLAZING PURPOSES. C. NOSOTTI respectfully informs Architects, Builders, and Others, that he can supply them with PLATE GLASS for windows and shop-fronts, at prices not to be excelled, the glass being of a more brilliant colour than generally used. List of prices free. Gold Mouldings for rooms, and every article required for general furnishing ready for immediate delivery.

C. NOSOTTI (Established 1820), 398 and 399, Oxford-street, Soho.

J. FISHER, 70, YORK-ROAD, LAMBETH, formerly shop foreman to Messrs. Lawrence. Shop-front builder and Manufacturing Joiner. 1½ and 1¼ four-panel doors from 6s. each; 14 sashes and frames from 7l. per foot; 3 inch ditto from 8l. Windows fitted with Gribbon's Patent Hinges for cleaning, painting, &c. All kinds of joiners' work estimated for according to design.—A List of Prices sent on application.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a posture-stamp, a full list of prices will be returned.—Workshops, 100, Broadwall.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country; an extensive assortment of specimens and patterns commencing at 1s per foot super together with every particular of its cost and adaptation, can be obtained of Mr. HURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and Co. 80, New Bond-street.

METALLIC PROTOXIDE PAINT.—This Paint has been in extensive use and severely tested on the Great Western, North and South Western, Midland, York and North Midland, and other railways; the new Houses of Parliament, British Museum, East-India House, East and West India Docks, &c. The Protoxide Paint unites most intimately with iron, preventing oxidation, and rendering it equal to galvanized. It is of great value when applied to iron vessels, roofs, steam and water pipes, and their joints, and for coating the inside of sugar moulds. It is not affected by foul air or gas of any kind, and dwelling-houses, hospitals, &c. can be painted during occupancy, without the least risk to the health of the inmates. It preserves wood from decay, and will be found effectual in preventing discolouration on stuccoed buildings, and keeping out all dampness.

D. and G. BRYMNER, Agents for Scotland.

Greenock, August 1st, 1855.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; FREDERICK BRABY, 50, Southwark-bridge-road, Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Yarmouth, Ipswich, Poole and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAMMONDJARVIS-BART., VENTNOR, ISLE OF WIGHT.

Second Testimonial.—"March 10th, 1853. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO. — Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Bar the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, elaborate or simple, Gothic, Elizabethan, pendentive or flat, Louis XIV in much variety, and to any degree of cost; Italian and Greek, Renaissance, and many in mixed characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-cases, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the traits of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture glass frames, tables, window cornices, screens, candelabra, and the whole range of accompaniments to reception rooms of the first class, as well as more subdued

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

The Builder.

VOL. XIII.—No. 656.

AT the opening meeting of the British Archæological Association, at Newport, in the Isle of Wight, on Monday, the 20th ult. Mr. Pettigrew took the chair in the absence of the Earl of Perth, and delivered an able introductory address upon the antiquities of the Isle of Wight. He observed that the original inhabitants, according to Suetonius, who was the first Roman author who described the island, were Belgæ. It was conquered A.D. 43 by Vespasian, one of the generals of the Emperor Claudius, who named it Vecta or Vectis. In the year 530 it was invaded by Cerdic, the Saxon chief, and founder of the kingdom of Wessex, who, according to the "Anglo-Saxon Chronicle," slaughtered the inhabitants of Carisbrook and repeopled the island with Jutes. From the Jutes descended the Kentish men and those who now dwelt in the island. At the time of the Conquest the island was granted to William Fitz-Osborne, afterwards Earl of Hereford, one of the most powerful of the Norman barons. In the reign of Henry VI. it was erected into a kingdom, and bestowed upon Henry de Beauchamp, Duke of Warwick, who was crowned by Henry's own hand; but he dying without issue, it passed again to the Crown of England. Sir Henry Englefield had remarked, that not a vestige of the Romans remained in the island. Since his time, however, various barrows had been examined, and the result was that Roman funeral practices had been discovered to have been adopted, while Roman coins and other remains had been found. The most remarkable antiquities of the island were tumuli, which were known to be the tombs of Britons, Romans, Saxons, and Danes. They were the depositaries of the remains of the most ancient potentates, chieftains, and warriors. The tumulus was more ancient than the pyramid. The simplicity of the original mound, consisting of little more than a heap of stones or a pile of earth, had served to perpetuate its existence; and while the pyramid, the arch, or the obelisk had decayed and sunk into oblivion, the tumulus still remained to impress us with the reverence which in the earliest times was paid to the dead, and to place before us the significant fact, that while the irresistible and never-ceasing action of the elements or the fury of man had demolished splendid temples and grand mausolea, the more humble tumulus had escaped, and had even been permitted to retain its pristine shape. Tumuli were found in all parts of the world, and they were the most permanent memorials, for nothing but an earthquake or a deluge, "those great winding-sheets," as Lord Bacon had happily expressed it, "which bring all things to oblivion," could destroy them. The ancient poets and historians all spoke of the mounds or tumuli. The most ancient barrows of this country were to be regarded as British: although there existed much difficulty in pointing out distinctly their essential difference from others perhaps of a period more recent, there yet appeared good ground for appropriating to this people those mounds in which a stone chamber, formed in a rough and crude manner, and varying in dimensions, was contained within. The earth of many of these mounds having in the course of time been removed, the stones had been exposed, and constituted what were termed cromlechs. But in addition to tumuli, there were other matters of great antiquarian interest in the Isle of Wight, among which were the old manorial and religious houses. A peculiar interest attached to that of Barton Oratory, from its having become the property of Her Majesty. It was founded at the close of the reign of Henry III. or the commencement of Edward I. under the Augustine rule. It was a simple, massive, and noble erection, but the greatest portion had been levelled with the ground. Two of the fronts had, however, been preserved. In the course of his address, Mr. Pettigrew described fully some of the results of investigations of the barrows and other antiquities of the island which had been made.

Mr. W. H. Black then commenced a running account of the Newport Records, many of which were produced and read by him in the course of it. The original charter of Richard de Redvers was produced and read, establishing the freedom of the borough. The next was the charter of Isabella de Fortibus, "the Lady of the Island," setting forth the original at greater length. Afterwards was exhibited a mass of other confirmatory charters, by our various sovereigns, from the time of Richard II. setting forth and certifying the charter of Lady Isabella de Fortibus, down to the youthful Edward VI. There seem to be some missing from this date, as the next was in the time of Cromwell, and was recited as that of "the keepers of the liberties of England." The last was that of Charles II. which from the contracted dimensions of a foot square, the size of the original one of Henry II. was now lengthened to about 3 yards, describing the further rights and liberties of the borough. Mr. Black showed himself a thorough master of his subject.

In the evening Mr. C. E. Davis, architect, read a useful paper "On the Characteristics of the various Styles of Ecclesiastical Architecture," as an introduction to his description *en route* of the several churches in the island intended to be visited. He described the various changes, explaining the peculiarities of the mouldings and caps, doorways, windows, buttresses, columns, arches, spires and pinnacles, towers, roofs, &c. connected with the various styles, showing how one style may be distinguished from another—when you *know* how.

Afterwards, an important paper was read by the Rev. Mr. Heath, on the Jewish Exodus, as illustrated by certain Egyptian papyri translated within the present year. In these papyri many points of the political history of Egypt at the time of the exodus are treated of, and are strongly corroborative of the Mosaic account. Thirteen hieratic papers have been published by the British Museum, of which five more or less, Mr. Heath said, illustrated the exodus, and portrayed the events of the day and the customs of the country.

Dr. Lee, Mr. Pettigrew, and others, were unanimous as to the value of the papyri, and the importance of directing attention to them.

On Tuesday the Association went to Carisbrook Castle (the majority of our readers doubtless know it, with its gateway, donjon, and well), and a descriptive paper on the subject, by Dr. Beattie, was read. The keep, he said, was either Saxon or British, the basse court being a Norman addition by Fitz Osborne.

Mr. Hearn, a local antiquary, guided the visitors over the remains, and afterwards read a paper on the imprisonment of the Princess Elizabeth, the second daughter of Charles I. with her brother, the Duke of Gloucester, within those walls, the object of which was to show that the historian Hume had given a false colouring to the subject, and raised an erroneous interest in the fate of that princess. He denied the statement that it was the intention of Parliament to apprentice the young princess to a button-maker in Newport. She was sent under especial care, with servants and furniture, but within a week after her entrance into the castle, being at bowls, a sport she much delighted in, there fell a sudden shower, and, being of a sickly constitution, it caused her to take cold, and she died on Sunday, the 8th of September, 1650. The body was interred in St. Thomas's Church, Newport. Knowledge of this fact died away, and it would have been wholly forgotten but for the discovery of the coffin and its plate in 1793. The queen has recently given directions for the erection of a monument to her memory in the new St. Thomas's Church.

Mr. Planché expressed himself strongly as to the value of Mr. Hearn's researches in correcting a perverted account.

Carisbrook, Shalfleet, Brightstone, Calbourne, and other churches were visited, but we will not attempt to give a complete account of all that was done. At the evening meeting—

Mr. Planché read a paper "On the Lords of the Isle of Wight." No public grant, he observed, of the island had been made before the Conquest, the land in the time of Edward the Confessor being held by the tenants of the Crown. The first Norman lord was William Fitz-Osborne, and it was stated by Dugdale that this baron had two sons, John and Richard, who died in their father's lifetime, and that after their death and the death of their father the estate descended to Richard de Redvers. Such was the account given by historians; but the real fact was, as proved from a perusal of the ancient documents, that William Fitz-Osborne had three sons,—William, who succeeded to the estates in Normandy; Ralph, who became a monk at Cormeilles; and Roger, surnamed De Breteuil, who inherited the lordship of the Isle of Wight. This prince, having conspired against William the Conqueror, was thrown into prison. Mr. Planché then detailed the long line of successive lords of the island, pointing out inaccuracies in Sir R. Worsley's history of pedigrees, and in the book of Ford Abbey. He did not wish, however, to undervalue the labours of so reputed an antiquary as Sir Richard. Great were their obligations to any writer who first put into form the character and elements of a local history. It was an easy task, in after time, and by a better light, to discover an occasional error, but it was an herculean one to collect and arrange the original materials, and produce a volume which, criticise it as they might, must always be of the greatest importance to the inquirer into the annals and antiquities of this sea-girt garden of England.

Afterwards, a paper by Mr. H. S. Cuming was read, "On the Relics of Charles I." With the name of this monarch, he said, Carisbrook Castle, where the king underwent thirteen months' captivity, would ever be intimately associated. There stood the moss-grown, ivy-mantled walls within which he was incarcerated, the ramparts round which he moodily paced, the chamber where he slept, the iron-grated window through which he made a futile attempt to escape, and beneath which lurked the wily Edmond Rolf with murderous intent on the life of the King. Newport also was associated with his fate, for there, in the old room in the Grammar-school, sat the Parliamentary Commissioners—Hollis, Glyn, and Vane—when they held their conference, and secretly determined on the death of the King.

The relics described and exhibited during the week were numerous. After mentioning many, Mr. Cuming stated that none of them had gained such notoriety as the knives with handles believed to have been cast of the metal which formed the equestrian statue of Charles now standing at Charing-cross. This noble statue, the work of the famous Hubert Le Sœur, was, according to Walpole, cast in a spot of ground near the church in Covent-garden, in 1633, and, not being erected before the civil war, it was sold by the Parliament to John Rivet, a brazier, living at the sign of the Dial, near Holborn-conduit, with strict orders to break it in pieces.

Rivet, however, concealed both horse and rider under ground till the Restoration, producing some fragments of old brass and a number of knives, the hafts of which he declared were made of the identical metal of which the statue was composed, and these were eagerly bought up both by Royalists and Republicans—by the one class from affection for their dead master, and by the other as a badge of the triumph of their party.

The exhibition on Wednesday of a curious picture, by Giles Tilbury, made in 1670, of the presentation of the Tichborne Dole, produced a paper on the subject from Mr. F. Baigent. It seems that while a certain Lady Mabella, in the reign of Henry II. worn out with age and infirmity, was lying on her death-bed, she besought her husband, as her last request, that he would grant her the means of leaving behind her a charitable bequest, in a dole of bread to be distributed to all who should apply for it annually on the feast of the Annunciation of the Blessed Virgin Mary. Sir Roger, her husband, readily acceded to the request, by promising the produce of as much land as she could go over in the vicinity of the park while a certain brand or billet was burning, supposing that, from her long infirmity (for she had been bedridden some years), she would be able to go round a small portion only of his property. The venerable dame, however, contrived to crawl round an area of twenty-three acres. The distribution continued to be made till the end of the last century.

Knighton Church, the Roman encampment at Monk's Bay, and the Barrows on Wroxall Downs, occupied the members on Thursday morning.

The Rev. Mr. Kell read a paper on the ancient tin-trade of the island. It was generally admitted, he said, that the Phœnicians carried on a trade with the Scilly Isles in tin, the fact being mentioned by Herodotus and other ancient writers, and his object was to offer a few remarks in support of the opinion that the subsequent trade between the merchants of Marseilles, Narbonne, and Cornwall was carried on through the Isle of Wight. After the Phœnicians, and subsequently the Carthaginians, had carried on this very lucrative trade many years, the Greek merchants of Marseilles contrived to gain a share of it. The Massilians were a colony of Greeks, who abandoned their country on its conquest, and, being inferior to the Carthaginians at sea, and yet unwilling to relinquish this extremely profitable trade, they persuaded the Britons to bring the metal to the shore opposite Gaul, to be transmitted through Gaul to Marseilles. On the conquest of Carthage by the Romans, they aspired to a portion of this trade, and their colony at Narbonne commenced a joint prosecution of it. One of the chief authorities for supposing this tin was brought through the Isle of Wight was the ancient writer Diodorus Siculus, who, after describing its manufacture, stated that they carried it to a British Isle near at hand called Ictus, for at low tide, all being dry between them and the island, they convey over in carts abundance of tin. The reader then went into several arguments to prove his position, and the opinion of those who spoke afterwards was that the tin trade of the ancient British was really conducted through this island, and that the tin was brought on pack-horses across the strait, which the old writer said was dry when the tide was out.

At the evening meeting, Sir Fortunatus Dwarris in the chair, Mr. Black gave a lecture on the "Ancient System of keeping Exchequer Accounts by means of Tallies." And the next day (Friday), when the association crossed to Southampton, where they were received by the mayor, the same gentleman gave a discourse on the Charters of that Town. In the course of it, Mr. Black read the Norman French charter of Edward III. which first conferred the privilege of a constitution upon the town. By an error in the endorsement, it was made to appear that the date of this document was the time of Edward I. but Mr. Black detected the indications of an erasure, which seemed to have been made some hundred years since to serve some particular purpose. Other documents related to the tolls on articles brought to the port. Among these was plaster of Paris, mentioned as early as the reign of Edward III. In one document there was a charge for flowers, to place in the court as a preventive against the pest.

A general examination of the town was made, and in the evening a meeting was held in the audit office, when a paper by the Rev. Beale Poste was read, entitled an historical Sketch of the ancient British Belgæ, the Inhabitants during the Roman Period of various Parts of Great Britain, including the Isle of Wight. He commenced by tracing this ancient people from the continent. The Belgic Gauls began to make expeditions to Britain about 360 years before Christ. Those who succeeded in occupying the northern part of the kingdom were styled Iceni; those who possessed themselves of the centre portion called themselves Britons, and only a portion of the southernmost kingdom, including the inhabitants of Hampshire, Wiltshire, Somersetshire, and the Isle of Wight, retained the name of Belgæ. The Belgæ were finally driven into the most western parts of the kingdom, where they at length found refuge, and maintained a rude independence till the conquest of the whole kingdom by William of Normandy.

A paper by Mr. J. A. Repton, with reference to Roman and British urns, was also read; and Sir Chas. Fellowes, Mr. Wansey, and Mr. Atherley, of Southampton, made various exhibitions.

Saturday brought the congress to a close, and found the members amongst the picturesque ruins of Netley Abbey, where Mr. Brannan delivered a lucid and agreeable discourse on the architecture of the structure. Portions of many other buildings, he said, might display more striking features of the Early English style, but none exhibited more clearly the successive advances from Norman through all the gradations of Early English into the Decorated style. The building was represented as having been founded by a colony of monks from the New Forest, but no documents relating to the abbey had been discovered. All that was known about it was that its first abbot, Robert, flourished in the year 1235, and that he was succeeded four years after by Walter, the next abbot. The salient points of interest to which he drew the attention of the association were, first, the progressive development of style; and, next, the arrangement of the different offices. The architecture, he continued, was of the highest degree of correctness and purity, and the structure, being Early English, was simple in design, but exquisite in execution, and though there was little architectural ornament, what there was was of the best kind.

It is greatly to be regretted that the dilapidation of this ruin should be allowed to go on: in a short time hardly a portion will remain perfect to show its beauty. Many of the corbels, admirable in design, have been knocked off, and want of care is everywhere apparent.

A closing meeting was held in Southampton, on the return of the party, and then the congress was over. The week was spent both profitably and pleasantly.

THE FIRST TOWN TO BE LIGHTED BY ELECTRICITY.—The electric light was exhibited in Deal last week, preparatory to lighting the town generally with it. It is said to have been perfectly successful, and a vast improvement upon the gas lights.

SOME MEMORIALS OF FATHER THAMES.*

STANDING at Battersea, not far from the inconvenient wooden bridge, we note the river-dyke running along the south bank, and on the north the rudely-constructed quay and other works. Some picturesque houses of about Charles II.'s time stand pleasantly on the road; and here we learn from an intelligent man, who has for many years been engaged upon the Thames, that there has been no encroachment at this point during about 130 years, as the title-deeds of some adjoining property show. "These rains, sir," says he, "have done a power of good to the river." "I believe that a great deal of the damage to the Thames would be stopped if all the sewers were carried into the middle course in pipes. Some people have laid the late bad condition of the water to various causes: some said it was cleansing the Brentford Canal—but that was not the thing that did it; they have been cleansing out the docks,—why do they do so in the hot summer weather instead of winter?" This observer also told us that at the time the condition of the river was attributed to the Brentford Canal, the fish (the flounders, &c) had actually left the eastern part and gone to the neighbourhood of the canal. "The fish turn their tails to any impurity. You cannot, sir, have better judges than the fish; and they came at the time of the disturbance in immense shoals from the neighbourhood of the docks. The fishermen tried here for some days after that, but without success. The fish are now coming back again, which is a good sign. I cannot say that I know of salmon having been caught here, but I believe that they still come. I have often seen porpoises off Battersea: last winter I shot two." Our informant continues, "There was an open sewer close to here, which was not only foul itself, but was also the means of laying a quantity of unwholesome deposit on the shore. This has been taken by pipes into the river, and we have not had so much to complain of since."

Having already mentioned the anxiety which has been for so many centuries shown respecting the encroachments on the Thames, we will now direct attention to an evil which is suffered at the present day, and which evidently must cause a great deal of the accumulation of mud which is so much complained of near town. This fact seemed very evident when standing on the steam-boat pier on the north-east side of Blackfriars-bridge, at the time the tide was beginning to run out: immediately under the first north arch of the bridge, the water as it fell left, for a few yards towards the bed of the river, a deposit of cleanly-washed small gravel: as the tide receded, the covering became a mixture of sand and mud, and then that dark grey slime which so thickly coats the greatest portion of the Thames at low water. To the east of our point of view numerous coal-barges extend into the river, almost as far as the eye can reach, in two, and in some instances three tiers; the barges intermixed with great posts. This view shows us how some prominent encroachments in the neighbourhood of Thames-street have originated. In parts of London, as we have before noticed, the alteration of thoroughfares, in the first instance intended to have dwelling-houses with gardens in front, into rows of shops is very gradual: a speculative tenant takes down his garden-rails, and exposes a few goods, such as furniture, &c. for sale; another, emboldened by this example, marches a covered shop to the public foot-path; and then, in course of time, the gardens are all covered by shops, and then the houses walk out one after the other, until they are on a line with the shops, and in a few years none but "an old inhabitant" would credit that pretty gardens and trees had stood in the bustling and commercial-looking thoroughfare. The growth of the wharfs along the Thames has, in the same manner as the London shops, gone through its gradual course; and this is shown to us while standing on the pier at Blackfriars in a very distinct manner. In the centre of the stream, vessels of various kinds, pieces of waste wood, and branches of trees, dead dogs, and

* See p. 337, *ante*.

A Dog in the Thames.

other things as unpleasant, float smoothly away with the tide; and we hope that the dogs, at any rate, may reach the sea.

Nearer to the shore, however, matters do not proceed in such a satisfactory manner, and although not agreeable, we must for a practical purpose watch the movement of one of many other carcases within sight, which have not run into the strong current of the stream. Many a halfpenny, says an official of the pier, do I give little boys to take away dead dogs from our shore. We have placed our eye on one particular dog, which may be seen in the engraving. "He," says the official already alluded to, "will not come back; I am glad of it." However, after a time, and after whirling and resting amongst the posts and barges shown in the engraving, the dead dog comes again in sight, moving *against the tide*, but much nearer to the shore; he moves off again towards the sea, and returns this time much sooner than the last; and after describing various circles, as shown by the arrows in the engraving, he is deposited amongst the slime, together with specimens of his own and other families; and we fear that our official friend will find it necessary to expend more halfpence on the boys before the next tide gives a chance of the break up of the museum. Now it seems very certain, that if the posts and barges and steam-packet pier had not been placed in their present position, the dogs would have floated steadily past this point. Other refuse will surely, by the obstruction to which we refer, accumulate. If the barges and posts are allowed to remain here, it will only be at great cost in the removal of the mud that we can prevent an accumulation of materials which will in time make a piece of land in front of the present wharfs. This has to a considerable extent been the mode of the conversion of a large part of the domains of Father Thames in the neighbourhood of the City into massive and substantial buildings.

An artist living on the banks of the Thames, near Lambeth, says, "I like to look out at the beautiful river, for in an artist's eye it is still beautiful at many times of the day, and often my pleasure has been marred by dogs and cats: I have seen a dog one morning floating past—he has come back again with the next tide, and for several days I had only to look at my clock in order to know the position of my visitor; he was larger each visit, and at last disappeared." This would show that putrid matter floats to and fro in the Thames, in the neighbourhood of Lambeth, several times before it gets to sea.

In the neighbourhood of Thames-street, in former days, a little pitch would be made by a boatman or others as a landing-place; then a bit of a shed would be built of wood, or other frail materials; then some of the people would prosper, and their vessels would increase, and other posts to fasten them to would appear in front, as we now see them at Blackfriars and elsewhere; these would collect the mud, and in time form rather solid earth, and then the wooden building would be changed for one of brick or stone, and in course of time the more substantial buildings at the rear, like the London dwellings to which we have alluded, would march on to Thames, and that being made substantial, then fresh barges and posts would be put out in order to restrict the width of Father Thames still more. Notwithstanding the accumulations on the bank, and the thick, curious-looking fluid (few would call it water), which when the steamers pass dashes against the land, it is a fine sight to stand for a time and see in the centre of its current the great river rushing so freely along.

"Ah," says a waterman, "it is a pity to see the old place in such a state. Why, sir," pointing towards Hungerford, where numerous other barges are placed, "there's five foot of mud there—it would be a good thing to remove it. Why not employ some of our convict labour in cleansing the river? It would be more profitable, and no worse for the convicts than picking oakum." Vigorous efforts to cleanse the Thames by means of dredging would, no doubt, be to a certain extent beneficial, but measures of a scientific nature, properly directed, would do more good. Remove all the matters from the shores of the river, which will be the means of collecting fresh deposits — confine Father Thames within a clearly marked line of wall, with properly constructed docks, which can be supplied with water without detriment to the river, in which barges, &c. might be unloaded, and when once the width is defined, let us see that by the help of water from the Severn, or elsewhere, the Thames shall neither become *shallower nor narrower*.

An examination of a rough plan of the encroachments at Thames-street, which will be presently given, will show that Father Thames has been pinched in here like a too tightly-laced young lady. The tide having got sufficiently low, a little regiment of women of different ages—some so thinly clad, that it is wonderful how their clothing hangs about them—sally forth from Blackfriars with bare feet, through the mud, in search of coals, wood, and other things that may come ashore, which may be worth a farthing, or even the fraction of it. Numerous "mudlarks"—strange slang to call them so—it makes one's heart ache to look at them—also get to work, and it is worth while to mention that these—perhaps the most wretched and neglected of all classes in London—have gathered up amongst the coals and wreck many a choice specimen of art, not only valuable on that account, but also from the circumstance of their being thrown out by Father Thames, as it were, to hint that a thousand and more years since, when the Romans built their villas on his banks, he was then running clearly and gloriously along, and should now be attended to with care.

Before leaving our point of observation at Blackfriars, we may mention that in times of drought, and in spring-tides, the Thames tastes *brackish* even here,—at Gravesend it is so almost every tide. A coal-merchant says, "I know the posts and barges, as placed, must do damage to the river; but the posts are granted to us by the corporation, and how are we to carry forward our business without these conveniences. * * * No doubt we might transact this business in docks. The property you see, however, is valuable." (So also is Father Thames.)

We have in the course of this inquiry spoken to some scores of persons of various conditions on the banks of the river, and all of them have acknowledged that, year after year, it has become worse and worse. Nevertheless, some of the most intelligent of those of whom we have made inquiry say, "That bad as the condition of the river is, an unnecessary amount of alarm has been caused by the floods, which have brought down from the numerous streams great quantities of earthy matter,"—besides washing out existing *cesspools*.

There is an old superstition in the north of England, that when the Earl of Derwentwater, who was a great favourite with the people of his district, was executed for his rebellion, the river Derwent ran blood. There were great floods at that time, and the peculiar soil of the neighbourhood stained the water of the Derwent red, and the imagination of the people supplied the remainder of the idea. In like manner the rain, to a considerable extent, caused the thickening of the Thames water.

Passing from Blackfriars to the Essex Pier, near the Temple, those engaged about there say, that the passage of the gas-water into the river in this neighbourhood is a decided nuisance, and in their opinion would be quite sufficient to frighten any fish from this part: the water from the gas works is usually let off in the night time; and several respectable people living near the Thames, to whom we spoke, said, that "the smell and inconvenience were really shocking—they were obliged to shut their windows and doors, and even that had not much effect." The Essex Pier, and barges close by, form another obstruction which perhaps cannot be done away with, except by clearing away the mud; but at Blackfriars-bridge, at London-bridge, &c. a way for passengers could be easily made, when the steam vessels could stop in the mid-channel.

Passing on to London-bridge, we may mention a regulation of the olden times in connection with the "lay-stalls," which is worthy of mention.

In 1322, on the meeting of Parliament, the state of the lay-stalls of the City was again taken into consideration—and it was enacted, that "all the filth of a certain lay-stall upon the bank of the river Thames be forthwith removed, and that the butchers of London should, before the ensuing Easter, erect a house or houses in a proper place, to receive all their ordure; thence to be carried in boats into the middle of the said river, and to be thrown in at the turn of tide at high water, and that no person shall presume to throw any rubbish, &c. in at the sides of the said river, or lay any filth or nastiness on the banks of the same, between the Palace of Westminster and the Tower of London, under a penalty of 10*l.* (a large sum at that time).——At London-bridge, the watermen to whom we spoke confirmed the opinion of our intelligent informant at Battersea, both as regards the late extra pollution of the Thames, and also the good caused by the rains; and looking from London-bridge, we cannot help reflecting with a sort of horror, that close to waterworks erected by Peter Morice, the Dutchman, "to supply the Thames through wooden pipes," was the huge sewer shown in a former engraving; and it may be worth mentioning, that the wheels of these water-works were moved by the common stream of the Thames, one turn of the four wheels making 114 strokes, and when the river was at the best, the wheels went six times round in the minute, and but four and a half at middle water. The number of strokes in a minute was 684, and as the stroke was 10½ feet in a 7-inch bore, which raised three gallons, they raised 2,052 gallons in a minute, that is, 123,120 gallons in an hour, or at the rate of 46,896 hogsheads per day to the height of 120 feet, including the waste, which was computed as a fifth part of the whole. The machinery forced the water to a basin on the top of a high tower of wood, which stood near the first arch at the north-west end of the

bridge. Chamberlain says "This invention has, by many improvements, arrived at such perfection under the direction of that great master, the late Mr. Hadley, that these works are said to be superior to the most famed water-engine at Marli, in France, which costs 25,000*l.* sterling per annum to keep it in repair."

CONSIDERATIONS AS TO THE PROPRIETY OF CONFERRING A DIPLOMA UPON ARCHITECTS.*

In the few following remarks it will be my endeavour to establish some certain conclusions as to the desirability, or otherwise, of conferring a diploma upon architects; and, as it will be therefore matter of necessity that I draw such conclusions from better evidence than the caprice of public opinion, I shall found none of my arguments on expediency, nor on the spirit of the age, but simply endeavour to ascertain what is right and what is truth; for I think that if we can but prove that certain laws, or certain regulations, would be good in the abstract for architecture and architects, good they must be in every age and throughout all time, — for truth remains unchanged, though opinion varies continually: therefore, in the first place I shall attempt to prove,—

That the art or science of architecture can be taught; and in the second,—

That to restrict the practice of architecture, professionally, to those *only* who have been so taught, would be beneficial both to the profession and to the public.

I. That the art or science of architecture can be taught.

It may seem idle to some to attempt to prove that which is so universally acknowledged in practice; but objections have been urged against the diploma, founded on the opinion that a real architect is in the main an artist, one whose peculiar powers and distinguishing mental characteristics are innate, and neither to be bought with money nor acquired by study, and therefore, that to propose a diploma as the door of the profession, would exclude many of the very persons the most fitted worthily to fill it, while it would admit a multitude of others who would never attain to anything higher than scientific building. I think, like the chameleon in the fable, we might reply to these objectors, "You all are right, and all are wrong."

Architecture is truly what they suppose: its most successful efforts are not merely the scientific disposal of matter, but the triumph of mind *over* matter. The taking rough, cumbersome, ugly materials, to minister to wants which the lowest animals share with us, and first satisfying those wants in all their fulness, then soaring so far above and beyond them that the cause is hidden by the very glory of the effect; so that the log or clay roof of the wigwam or the hut is forgotten in the spire, and men spin out fine metaphysical theories to account for that which has its origin only in instinct.

Such, in truth, is architecture in her highest degree of excellence; but, if we regard the art as a whole, and from its requirements endeavour to ascertain the points to which its followers should turn their attention, we must not begin at the highest place,—that eminence to which so few can ever attain,—but commence at the lowest rather, and proceed as best we may in due order upwards.

Viewed in this light, it is the architect's first office to provide shelter, and for that purpose his first necessity will be a roof, then walls and a door, and at length windows, fireplaces, and chimneys. In other words, his first and principal want is,—constructive knowledge. This he must have at any cost, and fortunately for him it may be obtained without any too severe labour.

To be architects we must become builders, and I think no one will consider it matter of dispute whether the science of building can be taught or not. It is as purely a matter of education as any other science,—chemistry, for instance; and a great part of the community would fare very grievously if chemists fancied they could dispense their prescriptions by instinct. Civil engineers, too, do not trust to instinct, but to education; and the doctrines they propound are always heard with attention, and frequently acknowledged to be true. Now this primary constructive knowledge on which I am insisting, is but a kind of domestic civil engineering, which, therefore, it is possible to teach, and possible to learn. Nor can it be acquired instinctively: education only can procure it.

If, then, an architect is one who requires constructive knowledge, and if that knowledge can only be obtained by a course of education perseveringly followed, it is evident that such an education is indispensable, and the only thing required by the advocates of the diploma is, that the architectural candidate should give to the public a guarantee that he does possess such knowledge, by passing through an examination before competent authorities, who would, if he acquitted himself deservingly, grant him a certificate, empowering him to act as architect: such certificate being a diploma.

I believe that not only the state of the profession, but the state of architecture generally, renders some such measure imperative; for, in the opinion of most, our national architecture has been at a very low ebb for some time; and though we hear occasional rejoicings over some isolated public building, and in such cases are congratulated on the revival of taste, what in the mean time is the state of the architecture of everyday life,—that mass of domestic buildings which year by year so steadily increases? We hear very little rejoicing about it. And yet, is it not the root of the whole matter? While the people generally are content to live in houses possessing for the most part neither constructive science nor any approximation to beauty,—houses dwelt in through necessity, and not of choice,—there is little hope I think for much good in public building, or for any real improvement in our architecture whatsoever; and for my own part, I would much rather see one house in a bye-street built well and beautifully, than know that some wealthy community was lavishing its thousands over its public hall or temple. For in the first case we could say to all "Go and do thou likewise;" but what imitators could the second obtain? We hear continual lamentations about the scarcity of patronage, the smallness of means, the niggardliness of communities, and apparently we spend all our energies in expressing our grief; for day by day, in the outskirts of all our towns and cities, house after house, and street after street, spring into existence, and for the most part with very little if any evidence of the existence of any such calling as that of architect. I am not going now to enter upon the questions of beauty or taste, for though I have not seen many examples of modern street architecture that I can admire, others may be of a different opinion, but whether they be ugly and mean, or beautiful and sublime, why should the walls sink and the window-heads crack, the stucco peel off and the chimneys smoke, the roof let in the rain, and the doors and windows the wind? Why, if not because those who build them and design them are ignorant and incompetent?

I do not say that they are architects: I believe that in general architects have but little to do with this sort of building. But why have they not? Are they too great gentlemen to accept anything under a villa or a cemetery chapel? Must they, too, draw their line somewhere? or is it because the public think an architect's only duty is to draw something pretty, and as they only want to spend their little savings to the best advantage, they cannot afford to pay for anything so useless? So they invest their money in French arches and bad cement, and are ignorant that there are those who could inform them that, after all, such an investment of their funds is neither the most safe nor the most profitable; for the public generally is in the greatest state of ignorance, not only with respect to architecture, but of architects also. They neither know what we have to do, nor have they any guarantee that we can do it. Now I believe that this ignorance is a very fatal thing to the profession generally, looking to the mass of domestic building as the chief field for the architect's labour. That which is good for individuals must be good for communities also; and we all know that a professional man has but a poor chance of success unless he possess good connections, or in some way or other can contrive to raise himself out of obscurity; and so with our profession itself, until it is better and more extensively known, until its followers are respected, and its labours recognised, its measure of success will, I fear, be but very poor.

We want to emerge out of the darkness and come into the light, and the brighter the light the better, so only that we can bear it. Publicity is the light we require, and if we cannot obtain it in any other way, we ourselves must seek it out and endeavour to secure it. The way to do so is in itself easy enough. A public examination would go far towards solving the difficulty for us; and by it we could make manifest who and what we were, and the public would form a far more correct opinion concerning us than is now generally entertained. People do not often take the law into their own hands, and the foolishness of those who do so has grown into a proverb; neither in my belief would they take architecture into their own hands, had they better opportunities of knowing the advantages they would acquire by consulting an architect, or were they sure in case of their so doing that the architect of their choice would prove qualified and competent. And with respect to this latter objection, I do not think that we have to contend with any more formidable: so many persons have been ruined, so many have been crippled for life by meddling with building, that I do not wonder that so many others who would rather by far build for themselves than trust to the mercy of the speculator, are nevertheless so frightened at what they hear and see, that they give up their wishes and buy a house ready-made (and like most other ready-made things, ill-fitting), as a matter of wisdom and prudence.

And why is this, but because there are those nominally of the profession who are altogether incompetent; occasionally fraudulent — black sheep, in fact, whose evil name affects the whole flock? Any man may call himself an architect, even if he is ignorant of the art altogether, and has nearly as good a chance of success as the carefully educated; for, how can the public determine between the two? By their works? Certainly not in the present state of constructive skill; and even if Mr. Fraudulent does occasionally disgrace himself, few persons want to build more than once, and the world is wide, and the trick easily hidden; so he looks out for fresh clients accordingly.

But the mere fact of such men existing at all in a profession, must be a serious evil to that profession, a cause of distrust and refusal of confidence,—a perpetual barrier to its growth and increase; inflicting a stigma which must attach more or less to every one following that profession; lowering its rank more and more every day, and every day more closely threatening it with destruction.

But I am wandering from my first object; yet if what I have stated be correct, that constructive knowledge which is the architect's first requirement, is in the power of every one to attain, and probably with ease. For there is nothing so abstruse in the laws regulating construction, but that a moderate amount of industry may make plain, and I believe that even a course of constructive teaching, followed for only six months, by all concerned in building, would suffice to cure a very large number of the mal-practices now existing.

It will be said, "You are making builders, and not architects." But why so? for by saying that architects should possess certain fundamental knowledge, they are not excluded from bringing their artistic powers to bear upon such knowledge, and so convert good building into architecture. I would rely for this latter faculty on that instinctive love of the beautiful, which in its different degrees is so universal: and though I do not imagine that any other power besides nature can make an artist, yet education is every artist's help, and they would manage but poorly without it: so that I do not think I err in stating that as far as architecture is a science it may be taught, and can only be acquired by so being taught; and again, that in so far as it is a fine art and therefore to attain any excellence therein the architect

* Read at an ordinary meeting of the Architectural Association.

must possess a natural ability,—that ability is still but as the rough ore, which needs refining before it is fit for use, and will be, to him, without proper education, comparatively useless.

I will now touch upon my second position, namely:—

II. That to restrict the practice of architecture, professionally, to those only who have been so taught, would be beneficial both to the profession and to the public.

There is a very great and praiseworthy tendency in the present day to oppose restriction, that is, unjust restriction,—restriction which interferes with that measure of liberty which each man ought to enjoy. But the opponents of restriction must not confound its use with its abuse, nor that measure of it which may be laudable with that which is injurious. And certainly that measure which provides only that a man shall be fit for the office he assumes, can hardly be placed under the latter head,—so that we can advocate the exercise of restriction with respect to our profession, without wishing for one moment to make it an exclusive one, or to fence it round with laws which should make it difficult of access, the whole of our demand amounting to this only—that, as a certain amount of knowledge is necessary to enable any to rightly follow the architectural calling, all who are desirous of so following it shall be required to give proof that they are so qualified. And that such an enactment is not foreign to, but, indeed, in accordance with the spirit of the age, the increased rigour of the examination required of candidates for admission into any of the other professions seems to be proof amply sufficient.

The following are a few of my reasons for believing that a compulsory examination would be beneficial to ourselves.

It is within the experience of many, that to the architectural student, who is desirous of making progress in his profession, it is a serious puzzle to know what to learn; and almost as great a one to know how to learn it: his ideas of construction are mainly picked up by chance methods, gleaned from occasional glimpses of working drawings, gathered from insufficient specifications, acquired by a stray visit to the carpenters' workshop. He does not begin by securing certain recognised and simple facts, and so progress onwards from one towards another until he attain the more abstruse questions of construction; but a boundless field is at once opened to his observation, and he goes running over it, hither and thither, chance and his will his only guides,—not the very best in the world, either, for an emancipated schoolboy. So that it frequently happens (frequently indeed, if we may judge by advertisements) that at the expiration of the time allotted for his education, he has again to enter an office,—not that he may practise, or that he may assist, but in order to obtain improvement.

Now, such things must be injurious to us: there are plenty of natural difficulties lying in every man's path, without any being added voluntarily; and of all such difficulties, perhaps the very worst are those lying in the path leading to knowledge. But instead of casting stumbling-blocks in the way, or instead of hiding the path altogether, the acquisition of knowledge should be made easy by every method within our power; nay, rather should be surrounded by every possible allurement; and even then many will not pursue after it with very much enthusiasm. So that if restriction did no other good than that, by making education compulsory, a definite course of education would, as a natural consequence, have to be determined upon, the benefit would, I believe, be enormous.

Again, if we suppose these first difficulties successfully overcome, the architect finds immediately that his claims for employment are contested by a crowd of incompetent pretenders, destitute of either talent or experience, who injure him in a two-fold manner; for while their success robs him, yet, on the other hand, if they fail, as oftentimes they do, their ill-fame covers him with discredit. Again, an architect who *is* an architect is entitled to hold his own against any member of any other profession: he must be, and is, gifted, educated, and a gentleman; but I will ask all who have an insight into such matters, whether such is the general character of the profession, begging them to remember that the public at large make no subtle distinctions between town and country practitioners, but class them together as a whole; and thus aggregated throughout the breadth of the land, does the verdict of the country accord to them the qualifications I have just enumerated? For my own part, I think not. I can but speak from my own experience, and that is necessarily limited; but I have heard many unpleasant insinuations thrown out against architects, and more than once, by far, I have heard all title to rank among the professions denied them. Do such things as these make a profession attractive? Is there anything very pleasing in being unjustly regarded with contempt, and would it not be good for us, as a profession, were all such evils removed?

Then with regard to the public gain, we must remember that an enormous amount is spent every year in building; and it is not to be denied that a large part of this outlay is spent injudiciously; for that money can hardly be said to be wisely invested which goes to the providing many of those constructional blunders which a walk round the outskirts of any of our large and increasing towns will show us existing abundantly.

It cannot be a good thing for the public that, when it chooses to meet together for any cause, be it religious, political, or for amusement, the roof under which it takes shelter should form a prison house for heat, closeness, and poisonous gases; that the windows and the painted walls should stream down with moisture; that comfort should be annihilated, enjoyment abridged, health assailed and endangered; when, by proper skill on the part of those entrusted with the erection of the building, all such evils would generally be obviated.

It cannot be for the good of the public that the smoke should so often refuse to make any use of the chimney specially dedicated to its service, and forcing its way into the room (a most unwelcome visitor), blacken ceilings, deface books, prints, furniture, and very often destroy good temper too.

It cannot be for the good of the public that houses should be built especially to burn, so that whenever a fire breaks out in a crowded neighbourhood, the wonder is, not that so much property is destroyed, but, on the contrary, that anything is saved.

It cannot be for the good of the public that every two or three years scaffolds should have to be erected around its dwellings, to stop up cracks, readjust arches, patch up broken window-cills, or for any other of the thousand and one tinkering processes which modern houses so frequently require, and which for the most part arise, not from insufficiency or badness of materials, but from the unscientific methods in which they are huddled together.

If, then, all these things, and many more of like nature, are injurious to the building community at large—as indeed they must be—clearly it would be a good thing if they were reformed or removed; but, for my own part, I do not see how they shall either be reformed or removed, unless by a more careful and complete system of education on the part of their producers. Necessarily, so long as, either through ignorance or through a foolish and suicidal policy denominated cheapness, the public entrusts its requirements to incompetent and ignorant men, so will they obtain imperfect and insufficient buildings. Nor will they fare better till they consult others better qualified. But, in the present state of things, it is a problem even if an individual be desirous of consulting a qualified architect, whether he can obtain one: I know such are to be obtained, and many such too, but they are so intermingled with those of an opposite character, that it is no easy task to find them, and it is one of the easily understood causes why men, if they possess a tolerable share of prudence, flock to established names, to the detriment of the young beginner, who has to wait, wait, wait, for his opportunity. The burnt child fears the fire, and, in the matter of building, so many have burnt their fingers,—so many can give their assent to Cowper's couplet,—

> "By building and building, a man may be driven
> At last out of doors, and have no house to live in,"—

that it is no wonder that in the absence of anything approximating to a test by which an outsider can judge of an architect's ability,—judgment, prudence, and all other good, sound, grave faculties warn him from making rash experiments.

But now, to wind up these remarks (for I am far more anxious to promote discussion than to pretend to exhaust the subject), I think that the benefits of "restriction" may be summed up as follows;—

To the profession generally, a far higher rank than that which it now occupies.

Next, individually, increased facilities for learning. The way smoothed towards ulterior advancement. Protection from quacks and pirates.

To the public, security that money shall not be wasted through ignorance, or incompetence. Security that the discoveries and the triumphs of science shall be brought to bear upon its dwellings, and that some better laws shall regulate all building than customs of trade, or bricklayers' experience; and last, though assuredly not least, a far better prospect than now obtains that building would, while it grew scientific, also become beautiful, and the city street a source of pleasure and delight, and not a thing from which to escape as soon as we conveniently may.

The ready reply of many to all this will be,—"Impracticable." It may be so, but we can hardly know unless we try; and, if we ourselves could but agree upon the subject, I hardly think that the public would debar us from that privilege of education which it claims so strongly and so justly for itself, but would rather, perceiving that education was highly necessary to every architect, agree, for its own sake, only to employ those who possessed such education.

And although, in its ignorance of architectural necessities, it might at first deny this latter provision, the former, at any rate, it would never object to; so that to seek diplomas voluntarily is still open to us, and is a scheme which I believe many regard with favour. Indeed, so far as it goes, it would be a good thing, and would, in all probability, lead to still better, and in time secure "restriction" itself.

A diploma voluntarily obtained would be infinitely better than none at all; and I believe no very great time would elapse before the public would discern the difference between its possessors and those who are without.

Let us, then, if we can, ascertain the general feeling of the profession on the subject; and, having decided upon what course to pursue, let us leave off discussing, writing, and speaking, and try to act.

J. H. Chamberlain.

PROVINCIAL NEWS.

Hornchurch.—On 16th ult. the chief stone of national schools was laid here by the high steward of the liberty. The new building will consist of a teacher's residence, with girls' school, 30 feet by 17 feet 6 inches, on the north side, and boys' school of similar dimensions on the south. Each school-room will be entered by a lean-to porch, containing washing apparatus, book-closet, hat pegs, &c. A class-room is also added to each. The walls, on a foundation of concrete, will be constructed of stock bricks and malm facings, with red brick dressings; Bath stone-work to be used in mullions, copings, &c. The roofs inside show the stained trusses and purlins, and externally will be covered with tiles on bands of old and new alternately. The architect is Mr. Frederick Beesley, of Westminster, his design being chosen from those submitted in competition last year; and the builder is Mr. Joseph S. Hammond, of Romford, who has undertaken to complete the works in four months from the commencement. After the ceremonial the workmen had a dinner in the village, at the builder's expense.

Wellington (Shropshire).—New schools, with master's residence, are to be erected here immediately, for the Wesleyan body, from designs by Mr. Wigginton. The buildings have a frontage to two streets.

Dudley.—The Dudley Castle *fêtes* have not brought that amount of assistance to the committee of the Mechanics' Institute, for their new lecture-hall, post-office, &c. that was anticipated. The committee catered well for the

public, to the tune of 1,200*l*. We fear, however, that but little more than the expenses will be realized, although about 13,000 persons attended on the last day.——The local Board of Health have to combat great opposition. Notice of a motion has been given for *dismissing* the officers of health!

Tipton.—The election of officers for the new Board of Health took place on the 10th, when Mr. Peacock was appointed surveyor, and Mr. Waring (a non-professional man), as clerk. In consequence of the election having been made by *ballot*, a new election is necessary. The same mistake was made at Dudley, where the General Board interfered in like manner.

Kidderminster.—A building for the Stour Vale Mill Company is in course of construction, to form the large steam shed for which Lord Ward, in his desire to assist the Kidderminster manufacturers in commencing steam weaving, has advanced the money, Mr. Kiteley and Mr. Grosvenor guaranteeing him interest at five per cent. on the outlay, with the intention of letting the space in compartments to other manufacturers, and finding them steam power for working the looms. The shed is designed principally for Brussels power-looms; but it will be equally available for tapestry power-looms, or any other machinery of a kindred character requiring the agency of steam as a prime mover. The front of the building will face towards the New-road, the rear towards the copse. The front will have a width of 176 feet, and consist of two stories, which will be used as warehouses and offices. This elevation, which is of red brick, will be ornamented with pediments, and with rusticated quoins, string courses, dressings, &c. of white brick; the windows will have circular heads, and frames of iron. Behind these warehouses lies the shed itself, which consists of a single room, with an area within the walls of 140 feet by 238 feet, on 33,320 square feet. The roof of the shed will be broken up into narrow ridges, each 14 feet 6 inches in width, the ridges running from the front to the back of the building. The girders which support these ridges run in 26 feet lengths, each weighing about a ton, and these are again supported by ninety cast-iron columns, each 12 feet 6 inches high. Each girder forms a gutter to carry off the rain from the roof, and each column is hollow, and acts as a pipe to convey the water into drains below the floors. The slabs of glass covering in one face of each ridge will be 5 feet 2 inches long, by 3 feet in width, and ⅛ of an inch in thickness. Of these panes there are 720. Means have been taken to secure both ventilation and warmth, and the floor will be secured from damp by a thick substratum of ashes. There will be starching and other rooms under the same roof with the shed, and a mechanic's shop (75 feet by 18 feet) will be built, and an engine-house, boiler-house, chimney shaft, &c. The architect is Mr. J. R. Bland, of Birmingham; the builder, Mr. Henry Ankrett, of Kidderminster. The expense of the buildings, according to the *Worcester Herald*, will exceed the sum at which it was proposed they should be built. It is thought that the shed will be completed in four months for the reception of looms, and the building finished by the end of the year.

Chippenham.—The defective state of the drainage of this town is occupying the serious attention of the inhabitants. Many cases of fever exist, and some have proved fatal.

Merthyr.—At a recent meeting of the Local Board of Health, according to the *Cambrian*, Mr. Gant, the surveyor, presented his report, which contained the following estimate for naming the streets and numbering the houses:—400 tablets, consisting of a cast-iron frame galvanised, with separate letters, composed of a white porcelain on a black ground, would be 180*l*.: tablets of cast-iron, with raised letters, would be about 100*l*.: slate tablets, such as are used at Swansea, painted with black letters, would cost about 30*l*. but would present but a paltry appearance for a town of this importance. The surveyor stated that numbering the houses with small oval tablets of cast-iron, with the letters and a small oval moulding projecting from the plate, with the ground painted buff and the letters white, would cost from 81*l*. to 85*l*. in round numbers.

Kendal.—The chief corner-stone of the long-talked-of New Covered Market, was laid on Saturday before last, with great *éclat*. The building is erected upon a site which has been used for market purposes from ancient times. The church formerly called St. George's, but of late disused, and two shops adjoining, at the west end of the ancient market, have been also removed to enlarge the site. The contract is undertaken by Mr. John Fisher, jun. a councillor of this borough, for 510*l*.; the mason work by Mr. Robert Shaw. Messrs. Thompson and Webster are the architects. The total cost of the building, including iron pillars, railing, &c. not comprised in the above contract, will be about 700*l*.

Jarrow.—The Jarrow Docks have been commenced, upwards of 200 men having been set to work. The works have been let for 231,149*l*. to Messrs. Jackson, Bean, and Gow, who have undertaken to complete them by the summer of 1858.

Dunse.—On Wednesday in week before last, the election of a successor to Mr. Hosick, as surveyor of roads for the middle district of Berwickshire, took place in the Town-hall, Dunse. The candidates were Mr. Waite, Dunse, Mr. Strachan, Swinton, and Mr. Cuningham, Ninewar. On the vote taking place, the numbers were—For Mr. Strachan, 22; Mr. Waite, 20; Mr. Cuningham, 9. The latter being struck off, the second vote stood thus—Mr. Waite, 26; Mr. Strachan, 23. Mr. Waite was declared duly elected.

Kirkwall.—Mr. Stevenson, engineer, is now engaged in surveying Kirkwall Harbour, preparatory to drawing up plans for a new quay, for the erection of which an Act of Parliament is to be applied for next session.

WALTHAM ABBEY CHURCH, ESSEX.

Amongst the places of interest within easy reach from London, and offering attractions of many sorts, is the ancient Abbey Church at Waltham—a building contemporary, or nearly so, with the church at St. Alban's, part of Westminster Abbey, the Tower of London, and St. Bartholomew's, Smithfield,—and which in the progress of time has figured in the history of the country, and is, besides, a characteristic example of the architecture of the Norman period.

There are several means of reaching Waltham. From Shoreditch station you may be conveyed in a very short time. Let us, however, advise those making a holiday, to take an early omnibus, or other conveyance, to Edmonton—from the City, or the Angel at Islington. Going from the latter point he will not fail to notice the remnants of old times, which, more or less disguised, are still visible in "Merrie Islington:" he will see "The Green," fresh and pleasant looking, in spite of the heat and droughty weather, and will hope that it may remain there: he will, however, not fail to regret the number of London and suburban greens, which have been sacrificed to buildings and paving-stones.

It is a pleasant ride along the "Seven Sisters" Road, towards Tottenham—a place marked not only by memories of Queen Eleanor, and other historic personages, but also by its picturesque avenues of trees, lanes, and mixture of gardens, and buildings—some of old date: several schools and almshouses form prominent objects; and it is almost a pity to pass them by without notice. On the front of one of these buildings, which has a nicely kept garden, in which several old men and women walk leisurely about, is the following inscription:—

"1600.—Not vnto vs, Lord, not vnto us, but vnto Thy name, Give ye Glorie.—*Psalme* cxv. 1."

"Balthasar Sanchez, borne in Spayan, in the cittie of Sherez, in Eastremadeor, is the Founder of these Eight Almes Houses, for the Reliefe of Eight poor men and women of the Town of Tottenham High Cross."

The wrought-iron gateways and railings, houses of Charles II.'s time, and some but little changed since Queen Elizabeth may have passed that way,—the numerous hostelries, many of them now altered to other purposes—remind one of the old stage-coach times, when scores of vehicles passed along here and the Great North-road daily, to and from London. The painted signs of these inns are some of them superior as works of art.

"Away went Gilpin neck or naught,
Away went hat and wig:
He little thought when he went out,
Of running such a rig."

Here at Edmonton is the famous Bell Tavern, on the sign of which is a lively representation of the citizen's progress.

Those who have not travelled along the road from Edmonton to Waltham, will be surprised to find such simple rustic manners so few miles from Whitechapel. On the roads the oxen are working in yokes in the carts and other agricultural carriages. The market and flower gardens, and rich meadows, stretch forth on all hands. In the hay-making time, a journey to Waltham is delightful: although we cannot quite shut our eyes to numerous ditches bordering too closely about the cottages; we will not say more about them at present, except to mention the pleasure which we felt at certain parts of the road to see notices placarded from certain local boards of health.

Waltham-cross, the next from Tottenham towards Northampton, is a good example of Queen Eleanor's crosses; and is about a mile from the old abbey, which presents a picturesque object for some distance before we reach it.

Having already given several notices of the abbey itself, and the accompanying view furnishing further details, we need not enter into historical particulars. The church was built between 1062 and 1066 by Harold, but what we now see is more safely to be attributed to the early part of the following century. The west front was rebuilt early in the fourteenth century.

Since we published the view of the west door, as restored under the direction of Mr. Poynter (Vol. XI. p. 16), the door of the south aisle, and the window over it, have been restored, and some trifling matters (a new altar rail, for example) done inside; but there are no funds for any important work, although, as the architect has long since reported, the fabric is in such a condition, the result of centuries of neglect, that at no very distant period the ruins of Waltham Abbey will be all that will remain of it. Nothing can avert this consummation but a substantial repair of certain parts, and that applied speedily. We are all interested in preserving this important relic.

ARRANGEMENTS FOR VENTILATION.

We have received specimens of a ventilator patented by Mr. B. Looker, of Kingston-on-Thames. It consists of a porcelain tube, from 4 to 6 or 8 in. diameter, let in to the brick wall, and thus communicating between an apartment and the open air. Inside the room is another tube, pierced with numerous orifices and slides, terminated with an ornamental disc, which, when desirable, closes the apertures from the external air. When the sliding tube is drawn out, fresh air is understood to be admitted, and impure air to escape, without draught. They are constructed of all lengths, to suit any thickness of wall, and are small in cost.

Mr. M'Kinnell, of "The Athenæum," Glasgow, has patented another mode of ventilation. It is described as consisting essentially of two tubes, the one placed within the other, with an annular space between them, and both opening freely to the external air. The internal tube, destined to carry off the vitiated air, is placed in the chamber to be ventilated with its downward opening near the ceiling, towards which the air, from its superior lightness, naturally rises. The annular space is intended to supply the waste by permitting the external atmosphere to pass through it into the chamber. A flange, checking the entering air in its downward course, is introduced to cause it to spread equally over the whole area without producing sudden fluctuations of temperature.

Survey of Yarmouth.—The survey, with plans of Great Yarmouth, prepared by Mr. J. Laing, the Town Surveyor, has been tested by the General Board of Health, and sealed by them as a "first-class survey."

WALTHAM ABBEY CHURCH: INTERIOR.

PARIS DURING THE GREAT EXHIBITION.

The following somewhat desultory notes and observations, made during a short visit to Paris in the month of July, are transcribed for the *Builder*, under the impression that they may interest such of the readers of this journal as have lately visited, or are about to proceed to, that city:—

Partly from a desire to travel by a road that was new to me, but more from motives of economy, I chose the little-frequented route of Dunkirk and Lille, and starting from Irongate Wharf at midnight, on the 31st of June, in the screw-steamer *City of London*, on waking next morning I found myself off Margate,—the day bright, the sea curling under a light breeze, and our ship under all her canvass progressing at the moderate rate of about nine knots. There are few persons who would not, under such circumstances, experience an increased flow of spirits; and, as I paced the little quarterdeck, chatting pleasantly with the skipper (a regular old salt), I felt as happy as a mortal could desire, and prepared to view everything in the brightest aspect. This route to France has many recommendations to those who are not over fastidious, and are tolerable sailors. The accommodations on board are not superb, and the vessels are small, but you receive civil treatment: there are seldom many passengers, and the motion of a screw-steamer, especially when under sail, is far less unpleasant than that of a paddle-boat, the rumbling noise of the main shaft tending more to produce sleep than to disturb it: in my case I awoke when the engine was stopped to put out the pilot at Gravesend, and fell asleep immediately it was started again.

Owing to the weather falling calm when in sight of Dunkirk, we arrived a few minutes too late to catch the afternoon train, although I made a run for it,—encountering at the station three fellow-passengers, each with a "gamin," carrying his bag, and each, like myself, too late: we agreed to make common cause in our distress, to dine together, to see the town, and to proceed by the evening train. Directed by the least stupid of the three boys, we proceeded to the "Chapeau Rouge," apparently the best hotel in Dunkirk,—arranged for a dinner at four o'clock, and set out to explore.

Dunkirk, the most northerly port of France, is a place of considerable importance. The streets are wide and clean, and the houses are neat, but generally low. In the Grande Place, in which a fair was being held, is a bronze statue of Jean Bart, one of the boldest and most successful seamen France ever produced, who was born at Dunkirk in 1650.

The church, dedicated to St. Eloi, is, or rather has been, a large structure; but a wide street has been carried through it, just abaft the tower, as a sailor would say; reducing, of course, the length very considerably. The tower, which is of brick, and well proportioned, now stands isolated in a small square on one side of the street, and a grand Decastyle Corinthian portico has been added to the remainder, which abuts upon the street. Both tower and church have the French equivalent for "commit no nuisance"* largely and conspicuously painted on them, greatly to the amusement of my three companions, who were in France for the first time, and who were not acquainted with some of the minutiæ of French manners and customs. Internally, the church consists of a nave and aisles, vaulted with brick, of which the church is mainly built, the aisles running round the east end of the church, which is polygonal. There is a clerestory, but no triforium. The arch mouldings, which are poor and shallow, run down the piers without caps or impost, and stop upon bases which are slightly moulded. The window tracery is mostly removed. The church, despite its mutilation, is still a spacious edifice, and capable of containing a large congregation. Service was in progress while we were there, and we heard part of a sermon, in French, which, as far as doctrine was concerned, might have proceeded from the lips of Dr. Cumming or Mr. Bickersteth: it was, in fact, a plain exposition of Christian duties, drawn from the examples of the Holy Apostles, delivered in plain but forcible language, and perfectly adapted to the class of which the congregation was mainly composed.

We were so much interested in the discourse, that we were in danger of forgetting our dinner, had not one of our party, who did not understand French, recalled our attention to the time; so, quietly leaving the sacred edifice, we returned to the "Chapeau Rouge,"—dined, paid our bill, which was moderate, and proceeded to the station, where we started for our several destinations—one for Frankfort, a young Irishman from T. C. D.; two others for Paris; and myself for Lille, where I arrived about nine in the evening.

Lille is a large and handsome town, and has all the appearance of a thriving place. Here are large factories for spinning flax, of which a considerable quantity is cultivated in French Flanders; cotton-mills, foundries, &c. In the country around are great numbers of small windmills, chiefly for crushing seeds. I strolled through part of the town early in the morning, and visited the Champ de Mars, the Boulevards, and the Grande Place, in which is a large allegorical bronze statue. I entered also the churches of S. Etienne and S. André,—the former a late Gothic building, much mutilated; the second, a fine work in the Palladian style, divided internally into nave and aisles of equal height by screens of Corinthian columns. Externally, it is built of red brick, with a western façade of stone, which reminded me of Temple-bar, the lower part being much wider than the upper, with which it is connected by scroll buttresses. This front is a sample of false taste in architecture, not having any accordance with the internal arrangement or distribution of the building.

The material principally used in building at Lille is brick, (the proposed cathedral is to be of brick), though there are some buildings in white stone from quarries in the neighbourhood. The Magasin de Blé and some of the factories are noble specimens of brickwork, none of which, by-the-bye, are executed in Flemish bond, but in alternate courses of headers and stretchers.

I left Lille for Paris by the 10·25 train for Paris, having for fellow-passengers in the compartment I occupied an Austrian gentleman and his newly-married wife—at least, so I judged, from sundry little endearments which passed while I was looking out of window,—who were proceeding to Paris for the first time; and though rather shy of an Englishman, we became very good friends before arriving at our destination. At Amiens we were joined by three priests, who filled our compartment, and were at first regarded as great bores, but eventually turned out to be very agreeable fellow-travellers. In the midst of conversation they all three suddenly pulled out their breviaries, and began repeating their offices with great piety, and this occurred twice on the journey.

The country passed through from Dunkirk to Paris is flat, and by no means picturesque, but fertile and highly cultivated. The effects of the law of inheritance, which entitles all the children to an equal share of real property, are very conspicuous in the great subdivision of property, the country being broken up into very small farms, giving it the appearance of the field allotments which are found in some parts of England. The absence, also, of parks and gentlemen's seats,—so striking a feature in English scenery,—is very remarkable. A good deal of bog land lies near the line, and the turf is cut, dried, and stacked, exactly as in Ireland, and is called, I believe, "tourfe," evidently the same word as our own.

On the evening of my arrival in Paris I took a stroll in the "Champs Elysées," of all places the most striking to an Englishman,—especially at night: their great extent, the innumerable lights, the shows, round-abouts, stalls—above all, the *cafés chantants*, the crowds of people and carriages, and the universal air of gaiety and enjoyment which appears around, at first confound him, but he soon enters into the spirit of the place, and I believe, in his quiet and grave way, enjoys it as much as the natives. Walking leisurely up the central avenue I came abreast of the "Cirque de l'Impératrice," which externally greatly resembles the "Cirque Napoléon," near the Port St. Martin (illustrated in the *Builder*). I entered, and found an English clown (Bridges) performing some clever acrobatic feats, and greatly amusing the audience with his wittieisms, not one word of which they could understand. The interior arrangements and decorations are very much like those of the other circus, but the roof is supported by wooden columns, at about one-third of the radius inwards, reducing the span of the roof to two-thirds of the diameter of the building. On the close of the performance, I went out by the back entrance and came suddenly upon the stables, where accommodation is provided for forty horses, in stalls lighted with gas, paved with wood, and altogether models of cleanliness.

Coming down the "Champs Elysées," I entered a "café chantant," a place where coffee, ices, lemonade, sherbet, &c. can be imbibed to the sound of music and the strains of syrens, who, decked out in white muslin flowers and jewellery, occupy a raised and gaily decorated stage in the open air, the public being seated at small tables in front of the proscenium. Plants and variegated lamps are arranged at intervals, and give a fairy-like look to the whole, but there is more show than substance,—the singing is not first-rate, and the refreshments indifferent and excessively dear.

The next day I went to the Great Exhibition. I had seen the Hyde-park and Stephen's-green expositions, and of course expected great improvements upon both, but I was disappointed. As a building externally the effect is far less striking than the old Crystal Palace, and the *coup d'œil* on entering is by no means equal to that of the transept in Hyde-park. Internally the building appears much too low for its breadth; but that arises from the mind being instantly referred to the building of '51, which was much loftier than was at all necessary, as the galleries were but one-third of the total height from the floor. However, the arrangement and classification of products is excellent: a much more equal representation of each class is apparent; and the decorative accessories are in much better taste, with the exception of the flags intended for red ensigns hanging over the English department, which are so badly proportioned—to say nothing of false blazonry—as to be with difficulty recognized.

After all, I believe there are not a few drawbacks in an exhibition of this nature. As a collection of produce of mercantile value, it cannot be depended on, as many articles are manufactured solely for the Exhibition; and as a place for study, it is nearly unavailable, from its heterogeneous nature, the noise and crowd, and the difficulty of fixing the attention to one class of objects. For all practical purposes, collections of the different classes of products in *separate* buildings or sheds of no architectural pretensions whatever, would, I believe, be far preferable; and, perhaps, the different classes might with advantage be exhibited at different times. Whether as a measure of policy the preparation of a Great Exhibition is expedient, is a different affair:—whether an adequate return for the great expenditure of public money is found in the impulse given to trade, and the contented employment of a large number of the dangerous, or rather the neglected, classes;—whether the assembling together so vast a number of individuals of different nations furthers in any degree the cause of civilization, or the establishment of principles of universal peace,—are questions which I am not competent to discuss.

From my first visit to the Palais d'Industrie I derived very little advantage. I certainly saw a great number of beautiful, curious, and interesting objects; but, after wandering about for seven hours, I quitted the building with my ideas in a state of bewilderment and stupefaction, only equalled by the corresponding bodily fatigue. On the occasion of a second visit I was more judicious; and, conscious that I could examine but a small portion, I made my way to the machinery (stopping, however, in the Rotonde, to glance at the crown jewels of France), and examined the productions of France, Belgium, England, and America, the

* "Il est défendu de faire ou de poser aucun espèce d'ordure contre l'Eglise."

principal contributors in this class. As far as I am able to judge, the French, if not already taking the lead of all other nations in mechanical engineering, are fast approaching that relative position. The advance they have made since 1851 is astonishing, though of course something must be allowed for their being on their own ground. In locomotives the comprehensive trials they are making of several widely dissimilar systems bid fair to have great results. The arrangement patented by our countryman, Crampton, seems the favourite at present. But I was much struck with a model locomotive engine, in which the fire-box extends the whole length of the boiler, the tubes returning in the upper part, similar to those of a marine tubular boiler. The area of fire and tube surface obtained by this method is enormous, and of course the evaporative power corresponds. There are some very fair specimens of spinning machinery exhibited by French machinists, but the latest novelty, and seemingly the most attractive to the public, is the sewing-machine. A great number of these are exhibited in the American section, and they are as much crowded as De la Rue's envelope-folding machine was in 1851. I could not avoid noticing the difference of "manner," I suppose it is, of the French and English attendants employed by exhibitors, whose duty I conceive is to afford every information to visitors concerning the goods in their custody. The English generally are abrupt, concise, and barely respectful; while the French are quite the reverse, and appear annoyed if they are unable to satisfy the most pertinacious inquirer.

The fine arts department is entirely separate, and very properly so: and of this department your readers have already heard. The French pictures, of course, occupy much the largest space, MM. Ingrès and H. Vernet having each a *salon* to himself, in which to exhibit his great battle-pieces. Far before all others in the whole collection I would place Rosa Bonheur's "Hay-harvest." The light of heaven pervades the landscape, the breath of life the animals; while satisfying the most captious critic as respects all the rules of art, it appeals to the unlearned with a power quite unapproachable. Pass from this work to the pictures of some other celebrated animal painters, and how poor, how feeble, how conventional they seem. But the readers of the *Builder* can judge for themselves, for a picture by the same gifted lady is now in London, which, even if inferior to the "Hay-harvest," will, I have no doubt, verify my words.

Our English engravers take a high station in their walk of art, and the works of Doo, Robinson (J. H.), Pye, Burnet, Cousins, and Atkinson, bear comparison with the best productions of the French school; and in architecture, as you have already said, we have no need to be ashamed.*

* To be continued.

CHURCH-BUILDING NEWS.

Colchester.—A stone altar-piece, of the Perpendicular period, by Mr. Brandon, executed by Mr. H. Lufkin, stonemason, Colchester, has recently been erected in St. James's Church, in this town. The work is divided into three compartments, comprising the Decalogue, Lord's Prayer, and Creed, in illuminated church text. The whole is surmounted with a cornice, crowned with a Tudor flower. Over the altar-piece rises a stained five-light window, with figures of the Evangelists. The altar-piece was erected at the sole expense of Mr. G. Round, a parishioner.

Buckingham.—The boundary-wall of the new cemetery is now in course of erection, and the other works connected with it are being proceeded with. To meet the cost of construction, the committee have agreed to borrow of the Bucks and Oxon Bank 2,100*l.* The drawings of the proposed chapels having been laid before the committee, and agreed upon, an invitation was given by advertisement to contractors to tender for their erection.

Earl Shilton.—On Thursday before last, the foundation-stone of the new church was laid here by Earl Howe. The chancel and chantry nave and aisle of the old edifice, which were found in a dangerous state, have been pulled down, and in their place a more extensive building is to be raised. The new building will consist of a chancel, with north and south chantries, nave, with north and south aisles and porches. The design was by the late Mr. R. C. Carpenter, and is under the superintendence of Mr. W. Slater. It is in the style which prevailed about A.D. 1300. The nave is extended to five arches in length, and the width is such as to require a covering of three gable roofs. The chancel is divided from the nave by a chancel arch, and extends about 15 feet eastward of the chantries. The east window is filled with tracery, and is of five lights. The side windows are of two lights, with several varieties of tracing, adapted from another church in the same parish, now in ruins. The roofs are of open timber-work, covered with tiles. The walls are constructed of stone obtained in the parish, and a variety is derived from using the different coloured stones procured in ornamental patterns. The windows are of Ancaster stone, and the arcades of Hollington stone. The contractor is Mr. Rushin, of Leicester. The church will accommodate 800 persons, and the expense incurred will be about 3,000*l.* The walls are already several feet high.

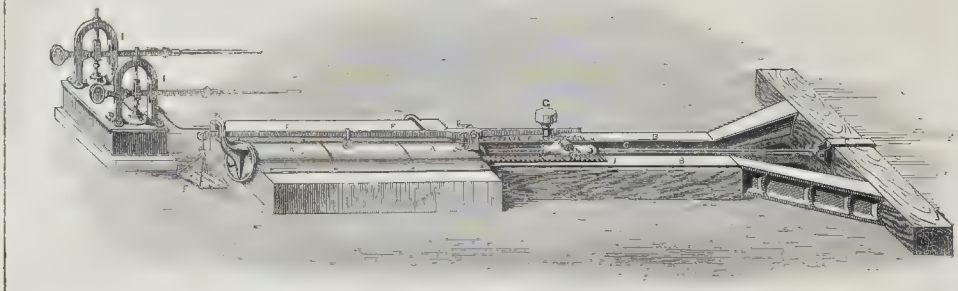
Wimborne.—Mr. T. H. Wyatt, the diocesan architect, has prepared plans for the rebuilding of the choir and chancels of the minster, and tenders to the amount of between 3,000*l.* and 4,000*l.* have been taken to carry them into effect.

Swanage.—The new cemetery here was consecrated on Friday before last. The cemetery is situated a short distance at the rear of the church. It is divided into two parts, one connected with the Established Church, and the other with Dissenters. The ground is about two acres in extent. The gates at the entrance are the gift of Messrs. Mowlem and Burt.

Stourport.—On Monday before last the foundation-stone of a new chapel, for the use of the Primitive Methodists, was laid at Stourport.

Chippenham.—The new Roman Catholic Chapel at Chippenham, in course of erection near the railway station, was opened on Wednesday before last.

Gloucester.—One of the windows on the north side of St. Aldate's Church has been closed up, and a new vestry is in course of erection on that side of the building.



Trefuant.—The consecration of Trinity Church, Trefuant, in the parish of Henllan, by the Bishop of St. Asaph, took place on Thursday before last. This church is an offering by two sisters, Mrs. Townsend Mainwaring, of Galltfaenan, and Mrs. Mainwaring, of Oteley Park, to the memory of their parents. Mr. Scott was the architect.

Stoke.—The opening of the new Congregational Church, Stoke-upon-Trent, took place on Tuesday before last. The church is situated in Copeland-street, and has been erected from the designs of Messrs. Bidlake and Lovatt, of Wolverhampton, architects; Mr. Burkett, of that town, being the contractor for the works. The erection is of red brick, with Hollington stone dressings, and is of the style prevalent during the early part of the twelfth century. The front is gabled, having on one side the line of coping broken as an aisle roof, and the other terminated by an open worked parapet, from the outer angle of which rises a pinnacle. The original estimate was about 1,500*l.* The contract, trust deed, architect's account, gas-fittings, furniture, land, &c. amount to 1,499*l.* 11s.: towards this 935*l.* have been paid; and 210*l.* are yet due from subscribers, &c.

Castle-Cary.—The parish church of All Saints, Castle-Cary, was re-opened on the 8th ult. The old church only imperfectly provided for 400 persons, but the present structure is capable of receiving 650, or, including children, 700, and 250 sittings are to be free. The cost of thus enlarging the old church has been almost equal to the rebuilding a new one; the total cost of the works being estimated at about 2,600*l.* Of this sum 800*l.* have been raised by loan upon the rates; 300*l.* have been granted by the Church Societies; and the remainder has been furnished by subscription. A deficiency of upwards of 300*l.* still remains to be provided for, expended in necessary works not included in the contract. The church is in the Perpendicular style of Gothic architecture, the architect, Mr. Ferrey, having preserved the characteristics of the old church, which is ascribed to the early portion of the Tudor period. Mr. Davis, of Langport, was the builder employed. The chancel has been fitted with stall oak sittings, and is paved with Minton's encaustic tiles. Behind the altar is a stone panelled reredos, decorated by Hudson, of London. The high pews of the old church have been succeeded by a uniform arrangement of open sittings. The galleries (which, owing to the small area of the building, and the large increase of church-room needed, could not be dispensed with), no longer protrude beyond the piers. Three of the windows are of stained glass. The east window, by Mr. O'Connor, has been contributed by the vicar and a few friends: it has four principal lights, in which are represented, in three tiers—first, the Patriarchs; second, the Saints of the Apostolic age; third, the Representative Saints of Great Britain. The other two painted windows are obituary memorials; the one on the south side of the chancel executed by Mr. Wailes.

Brampton Bierlow.—The distance of the townships of Brampton and Melton from their parish church at Wath-upon-Dame, led the Rev. H. Partington, the vicar, and some of his parishioners, to act as a committee for the erection of a new church, in a convenient locality, and this has been recently consecrated by the Archbishop of York. The church is in the Decorated style, and consists of nave and aisles, 65 feet by 42 feet, and chancel, 24 feet by 18 feet, and has sittings for 500 adults, half of them free. The tower is 70 feet high, surmounted by eight pinnacles, and is attached to the west end. The building is erected with stone quarried in the church-yard, with the exception of some of the dressings, which came from the Darfield quarries. The ceilings are groined with stained deal ribs, springing from carved corbels representing angels with their wings extended, the span being filled up with lath and plaster. The seats are low and open, of English oak, presented by Earl Fitzwilliam, who also gave 1,000*l.* and the land. The reading-desk, communion-rails, and pulpit are of Ancaster stone, and the font of Caen stone: the two latter have carved panels, executed by Jackson, of York. The building is heated by hot-water pipes, circulating from a boiler in the basement, the flue from which is carried across the church-yard to a chimney built at the boundary wall. The cost of the building has been about 2,500*l.*,—including the fencing, bell, heating with hot water, and sundry expenses, about 2,800*l.* The principal contractors were Shaftoe, of York, for masonry, and Whitaker, of Woodlesford, near Wakefield, for carpentry. Messrs. Pritchett and Sons were the architects.

Ackworth.—The church of St. Cuthbert, Ackworth, the reopening of which took place on 2nd ult. is built upon the old line of foundation, with the exception of the chancel aisle, which is now of equal length with the chancel, opening into the north aisle of the nave by an arch carried upon carved corbels. The edifice consists of nave and two aisles, western tower, and chancel, and north aisle, the latter being in part seated, and the remaining and eastern portion forming the vestry and site for the organ. The style adopted in the restoration is the geometrical, the original south arcade and priests' door in the chancel being of that period. The arcades in the nave are of two bays each. An arch opens into the tower, and the chancel arch is of large size, moulded, and supported upon piers similar to those in the nave, being a quatrefoil on the plan. The capitals, which are carved, were presented by the Rev. R. E. Batty and his wife. The seats in the nave and aisles are of stained deal, and open. Five of the windows are filled with stained glass, and are memorials of deceased parishioners. The old font placed in the church by Dr. Bradley, who was chaplain to King Charles I. and was with him on the scaffold, is refixed near the south entrance. The chancel has open seats of oak. The floor is laid with encaustic tiles. The ancient sedilia are restored, and the original credence is replaced by one representing the clustering vine, wheat-ear, paten, and chalice. The old altar has been restored. The chancel is lighted by three windows; on the south a single light containing a figure of St. Alban, the gift of Mr. Spark, a former choir-

MACHINE FOR TESTING TIMBER AND CABLES.

master, and a two-light, containing SS. Hilda and Ebba. The large east window, of five lights, contains full length figures of SS. Edmund, Augustine, Cuthbert, Paulinus, and Oswald; and in the tracery are the subjects of St. Cuthbert as a shepherd reading the Scriptures, and St. Cuthbert administering the Holy Communion to Boisil, "the man of God." The three windows in the south aisle are memorial: the west contains "The Baptism of Our Lord," and "Christ blessing Children," with an angel bearing a scroll in the head. The south window contains "The Agony in the Garden," and "Bearing the Cross," with the emblem of St. Matthew in the head. The east window of this aisle is of three lights, and is the gift of Mr. T. Pearson: it contains "The Crucifixion," "Resurrection," and "Ascension," the tracery being filled with angels. In the north aisle, the west window is the gift of the family of Wilson, and contains "The Annunciation," and "The Presentation in the Temple." One of the north windows is filled with quarries, and angels in the head, and is the gift of Mrs. Leatham. The remaining windows in the two aisles have been presented, but are not yet inserted: the subjects are "The Nativity," "Adoration of the Magi," "Flight into Egypt," "Massacre of the Innocents," "The Crowning with Thorns," and "The Scourging:" the emblems of the other three Evangelists are in the heads. The whole of the stained glass is by Mr. Wailes. The length of the nave is 36 feet, the width of nave and aisles 51 feet, chancel 30 feet long, and 19 feet wide. The whole is now completed with the exception of the tower. A figure of St. Cuthbert is placed in the niche of the porch, the gift of a friend. Mr. Hugall was the architect employed in the restoration.

TIMBER AND CHAIN CABLE TESTING-MACHINE.

We have already quoted the result of some experiments made at the Paris Exhibition, with the machine invented by Mr. Dunn for testing the strength of chain cables and timber, p. 347, *ante*. We now give an illustration of the machine itself, which will be understood from the following references:—

A A. Hydraulic cylinder, with piston inclosed, made tight with double-acting leather.
B B. Cast-iron frame or trough, to prevent the materials from flying about when broken.
C C. Connecting rod, as shown attached to a log of timber.
E. Piston plunger under fulcrum to indicate the actual pressure.
F F F. Steelyard lever, marked for cwts. and scale for weights for tons.
G. Weight to balance the piston of the machine.
I I. Powerful hydraulic pumps, to force water into the cylinder.
J J. Rack and pinion to bring back the piston after the operation.

The operation commences by forcing water into the cylinder by the pumps: then the weights are lifted which indicate the tons, and the sliding weight on the steel bar indicates the smaller weights of fractions of a ton; so that the deflection of the timber can be taken at any part of the process or at any pressure. The textile strength of chains or bars can also be taken in the same way. Machines for the same purpose, but much more complex, formerly cost, we are told, from 5,000*l.* to 6,000*l.*: they can now be made for as many hundreds, so that any ship-builder, bridge-builder, or contractor, may have one and test his work. When we remember how many ships have been lost through a bad link in a cable, and how many buildings have suffered through bad iron or insufficient timber, the value of such a machine as this becomes evident at once.

COMPETITIONS.

Sudbury Cemetery.—The Burial Board of Sudbury have awarded the premium offered by them to the design of Mr. Pritchett, of Darlington.

Birmingham and Midland Institute Buildings.—We learn from the *Birmingham Journal*, that the elevation of Mr. Gibson's design is in the columnar Italian style, and consists of a projecting centre facing the Town-hall, with portico. It resembles the Town-hall in general treatment. Mr. E. Barry's elevation is Italian, with pilasters and portico. Mr. James's elevation is very elaborate, and is also in the columnar Italian style. The drawing is enriched with sculpture, but that does not necessarily form part of the building proper. The design of Mr. Lockyer is what is called Fenestrial Italian, that is, the windows form the chief features, and it differs very little from the ordinary domestic style. Mr. I'Anson's is strictly Greek; bold and simple in treatment, and without portico. Mr. Bowman's is in the Italian style, and is treated with considerable severity. The elevation of Mr. Hemming is in the plain Italian style, almost devoid of ornament. That of Mr. Bateman is technically columnar Italian, but the style is treated with greater freedom than is conventionally supposed to belong to the style. The extreme wings are surmounted by domes, and the windows are enriched with successions of columns and pilasters. Mr. Yeoville's elevation is also Italian. Mr. Bland's design is Italian, with a centre and two wings, the centre being treated in the classical style.

Gratuitous Plans.—I was struck by an advertisement in your last number, which possibly marks the commencement of a new era in competitions. The congregation of a Dissenting chapel who had, doubtless, been recently studying the text,—"The labourer is worthy of his hire," advertise for "gratuitous plans" "for a chapel to contain 1,000 persons." Surely it is a great oversight on their part, not to have specified that the competing architects should provide themselves with a *gratuitous* builder, and a minister to officiate without a stipend. I trust a clause to this effect will at once be added to the advertisement, and beg to inform the congregation that my advice is quite gratuitous.—Advice Gratis.

*** We have received four other letters to same effect.

The question of architectural competition is one so important as to deserve the most serious consideration. Committees grow more and more arbitrary and exacting—disposed to take every advantage of architects, knowing that the latter are fully in their power, and cannot help themselves; unless, indeed, they and those who speak for them make some strenuous effort to obtain redress. Feeble, and perhaps mere make-believe attempts to do so, are worse than nothing; for they only serve to confirm people in the notion that bad as things are, they cannot possibly be made better. Even as "faint heart never won fair lady," so neither can an occasional soon-forgotten squeak or two from individuals effect any real good in correcting competition and its manifold abuses.

Anti-Competitionist.

GAS IN ROME.

We have on several occasions alluded to the lighting of Rome with gas, and we prognosticated, before it was effected, from our knowledge of the energy of the *Gerant*, the success of the enterprise. It will be seen, from an advertisement in our columns, that the undertaking is already so far developed as to require a considerable extension of the mains, thus holding out to the proprietors (who have already received two dividends), the prospect of a very profitable investment.

We hail with pleasure this first great step of progress in the Eternal City; but we would ask if it is to be succeeded by no other,—if gas is to be the limit? Is Rome to be left without that essential to development and improvement—a railway? Is Mr. Shepherd, who has so successfully carried out his views as to lighting, in the face of deep-rooted prejudice, too much occupied to turn his attention to the subject? If not, we would augur for him success, and for Rome advantage.

THE WORKMEN AT SHORNCLIFFE.

We have received a letter "on behalf of the workmen at Shorncliffe," requiring us to give them the name of the writer of the paragraph headed as above, which appeared in a previous number, p. 384, and is designated by them a calumny. The statement contained in the paragraph came to us, in a stronger form than it appeared in, from more persons than one, both at Sandgate and at Folkestone. We are quite willing to believe, however, from the anxiety shown to deny the imputation, that the parties misbehaving formed exceptional cases, and that the body of workmen are as desirous as we are of maintaining the good character and position which belong to English artizans.

STAINED GLASS.

The design of Mr. Wales has been approved by the committee of the Wolverhampton Wellington memorial window to be placed at the west end of the Collegiate Church. It has not been deemed appropriate to represent anything referring to the great duke or his achievements, but an inscription will testify to the object designed.——A stained glass window has been inserted in the south transept of Trinity Church, Cambridge. The window consists of five compartments, each ornamented with a figure. The centre one is that of our Lord, with inscription. In the two compartments on the right are figures of St. Luke and St. John; and, in those on the left, of St. Matthew and St. Mark. The window, as adorned, has been presented by Mr. Claydon. The artist was Mr. W. H. Constable.——Mr. Hedgeland, of London, has filled the east window of Halifax parish church. The stonework was subdivided into compartments, each containing a distinct subject. The arched top is filled up by ornamental crockets, pinnacles, &c. enclosing niches for two emblematical figures, and below these are larger ones for the Four Evangelists. In the great centre compartment there is a representation of the Resurrection. On the left side of this there is the scene of the two

disciples at Emmaus; and, on the right, the incredulity of St. Thomas. The middle place of the lower division is filled by the Crucifixion. On the left there is the scene before Caiaphas, and on the right that where Jesus is led away, Pilate washing his hands of the guilt. In the tracery of the head of the window the screen work is carried up, and in it are seen figures of the Four Evangelists, and angels bearing shields. Besides the window there has also been added a reredos of Caen stone. The cost of the whole will, it is said, be about 1,000*l.*——A second stained window has been put up in the parish church of Berwick-upon-Tweed. The glass and stone-work were presented by Mr. Dudley Coutts Marjoribanks, M.P.; and the former was executed by Messrs. Baillie and Mayer, of London.

COLOUR IN BRICKS.

IN reference to a previous paragraph under this title, Mr. Wentworth L. Scott, who has of late favoured us with some communications under the signature of "An Analytical Chemist," says that the subject momentarily engaged his attention some years since, but not knowing any brickmaker who would undertake the necessary experiments, he disregarded the processes which had suggested themselves. He thinks the following salts, &c., if well dried, pulverized, and mixed with the clay, before moulding, or, if they are soluble, dissolved in the water employed to moisten it, very likely to produce the desired effect; at the same time, however, not vouching for their efficacy, as most of the results are as yet but little more than theoretical. No method, he observes, should be regarded as valueless from the failure of two or three trials only: *ten* at least should be performed in various ways, and with different quantities of the mixture, to be any fair criterion. The *proportions* of the substances to be added to the clay he has not given, as the per-centage will be very small, and must be ascertained by experiment. The methods would entail but a very slight addition to the price of the bricks when made—the most costly of the salts not mentioned as expensive being but 1d. per lb. retail:—

*Substances to be Mixed with Clay (in Powder).	Colour Produced (probably).	Remarks.
Phosphate of soda	Delicate blue	Perhaps too expensive.
Phosphates of lime—		
Bone-dust	"	
Oyster and other shells	"	
The mineral "phosphate of lime"	"	
Mixture of any of the above with one-fourth of its weight of alum	Ditto, better tint	
Mixture of three parts of sulphate of lime ("white vitriol"), with one part of biborate of soda ("borax" or "tincal")	Greenish	Doubtful, but worth a trial.
Sulphate of iron	Fine red	Pretty certain to succeed.
Ditto, with about 5 per cent. of nitrate of soda or potash ("nitre," "saltpetre")	"	"
Sulphur and oxide of tin, in equal proportions	Yellow	Perhaps rather expensive, but a good effect if successful.

*The salts are supposed to be quite anhydrous, and to be measured by weight.

WATER-TOWER, WORTHING.

THE Local Board of Health, Worthing, have recommenced their sanitary works, which had been at a stand since the appointment of Mr. Ranger (who commenced them) as one of the superintending inspectors, under the altered arrangements of the General Board of Health, requiring that his whole time should be devoted to his public duties. The foundation of a new water-tower has been put in: this structure will be of brick, supporting a cast-iron tank. The tower and tank will be forty feet square. From the ground line to the underside of the tank will be seventy feet. The tank will be thirteen feet in depth, roofed over. The total height, when finished, will be 110 feet. The weight of brickwork, tank, and water, will be about 4,000 tons. There will be a centre spiral staircase passing through the tank to a platform above it. When completed, this structure will be a landmark for many miles around. Mr. Robert Rawlinson is the engineer.

THE CAMBRIAN ARCHÆOLOGICAL ASSOCIATION met at Llandilo Fawr, on Monday, August 27th and five following days, when various excursions to places of antiquarian note in the neighbourhood were made.

GLASGOW, AND HOW TO PAVE IT.

THE Statute Labour Committee of the Town Council of Glasgow have under their consideration, "A scheme for permanently paving the streets of that city with a peculiar description of granite of such durability as to be almost indestructible."

The streets proposed to be operated upon extend to twenty miles in length; and these they propose to pave and put into a permanent state of repair within seven years, at a cost of 180,000*l.* And, with the view of laying on the future inhabitants a fair share of the expense, without increasing the present rate of assessment of 3d. per pound on rental, they propose to borrow the amount of capital required by annuity bonds, granted on security of the assessment, and terminable at thirty-five years.

According to the calculations of Mr. Gemmill Convener of the Committee on Finance, which have been tested by an actuary, it is found that by this scheme, at the end of thirty-five years, the whole of the borrowed capital would be paid up, and that the surplus saving would amount to 113*l.* 6s. 10d. besides the interest which would arise thereon.

Notices of Books.

Meteorological Essays, by FRANCOIS ARAGO; with an Introduction by Baron A. VON HUMBOLDT. Translated under the superintendence of COLONEL SABINE, V.P.R.S. London: Longman and Co. 1855.

A VOLUME with three such names as those of Arago, Humboldt, and Sabine on the face of it should need little recommendation to notice from any one. We draw the attention of our professional readers to it mainly on account of the large mass of useful and important facts with reference to lightning and lightning-conductors, the effects of lightning on buildings, and the peculiarities of its action on them, and other cognate subjects. Read in connection, especially, with Sir Snow Harris's treatise on lightning-conductors, and with the remarks of Professor Faraday and other competent authorities,—the present volume, one half of the 500 pages of which are occupied in its discussion, cannot but be both instructive and interesting. Arago, moreover, had himself the advantage of a perusal of Harris's treatise.

Miscellanea.

CRACKS IN LEAD.—I am not builder enough to say whether the following cement would be of use in stopping the "cracks in lead" complained of lately by one of your correspondents, but for everything *except* metal-work (which I have not tried) I am constantly using it. Mix well two parts of Keene's or Parian cement (or any good hydraulic cement), and one part of very fine sand, to the consistence of cream, with some of the hot solution of silicate of potash and soda I recommended in the *Builder* a short time ago for the cure of "salt and damp in walls," and apply to the cracks, &c. with a strong brush. Do not make too much at a time, as it soon sets.—W. L. S.

OUTSIDE PAINT FOR HOUSE WALLS.—A correspondent, "T. W." asks if there is any description of drab-coloured paint, or composition of any kind, that he could with advantage substitute for the more ordinary washes hitherto used,—a composition that would adhere better, and not be so expensive as ordinary paint, and would prevent the dirt and annoyance of lime-washing. Our correspondent remarks that he inquires every time in vain of his own painter, and he assures him there is nothing of the kind, but he is not satisfied with this answer, as he every now and then sees articles advertised in our columns as substitutes for paint for external walls. All we can say is that similar questions have been put in our columns by many correspondents, and as no satisfactory reply appears to have ever been given, we must conclude that "T. W.'s" painter is not far wrong. We allow our correspondent, however, to put the question in this form once more, and shall be glad if it brings him a satisfactory reply. The article he wants is a permanent stone-colour for outside walls.

CAUTION ON BUILDING COTTAGES.—The Committee of the Society for Improving the Condition of the Labouring Classes, having been informed that a gentleman in the country has paid the enormous sum of 450*l.* for the erection of a pair of cottages on their plan No. 4, and another gentleman in Lincolnshire paid about the same amount for the same plan, deem it right to state that the Windsor cottages on that plan cost only 210*l.* per pair, and, under ordinary circumstances, that amount ought not to be much exceeded.

THE LUDLOW REREDOS.—Sir: Your reporter may have reason for the ill-natured tone of his reference to the humble part I took in the recent proceedings of the Archæological Institute. I do not quarrel with him for his hit at me in connection with the general question of restoration. In fact, it is neither more nor less than a truism to aver that "restoration is destruction." But my present object is to say a word in defence of the credit and character of the late Mr. Rattee, of Cambridge, by whom the carvings in the Ludlow reredos were executed. He was not the man to feel such little interest in his work as to manufacture "statues that can be bought by the dozen."—R. K. P.

MONUMENTAL.—A cross memorial has just been placed in All Saints Churchyard, Hastings, over the grave of the late Lady Harriet Paget, relict of General the Honourable Sir Edward Paget, G.C.B. by direction of the family. The work was entrusted to Mr. Richardson, sculptor, and consists of an erect perforated cross, enriched with lily terminals, and an angel ascending in the centre.

THE WILTSHIRE ARCHÆOLOGICAL SOCIETY.—This association will hold their annual meeting at Chippenham, on September 11th, 12th, and 13th, under the presidency of George Poulett Scrope, esq. M.P. The general meeting will be held on the 11th, at the Hall, when papers on subjects of interest in the county will be read. There will be a dinner at the Angel Inn, and in the evening a meeting at the Hall, when addresses will be delivered, and the Temporary Museum explained. The excursions on the 12th will include Lacock Abbey, Bromham Church, Beauchamp Chapel, Whetham House, Bowood House and grounds (the privilege of visiting which has been kindly accorded by Lord Lansdowne), Castlecombe,—visiting the church and manor-house, the site of the ancient castle; returning through Gritteton and Sevington to Leighdelamere Church, and thence to Hubba's Lowe, a Cairn on Lanhill Farm, which it is proposed to open; to Bradford, visiting Chalfield House, South Wraxhall House, and Kingston House. In the evening a *conversazione*. On the 13th, some will go to Malmesbury Abbey, some to Bradenstoke Abbey, and Draycot Park. Collations are offered in all quarters.

MODEL LODGING-HOUSE, WINDSOR.—A correspondent states that the model lodging-house for single men, not answering the expectations of the promoters, has been converted into barracks, for which it is found to answer well. The model dwellings for families at Windsor, the same writer states, are all let, and realizing the results expected of them.

ISLINGTON LITERARY AND SCIENTIFIC SOCIETY.—Mr. W. E. Jenkins, formerly secretary of the Marylebone Literary Institution, has been elected librarian of this society, in the place of Mr. Joseph Simpson, who has resigned in consequence of having embraced a favourable opportunity of going into business. We are pleased to learn, that it is the intention of the committee and members to mark their sense of Mr. Simpson's zealous and valuable services, during a period of eight years, by presenting him with a testimonial on his departure.

ARCHÆOLOGICAL REMAINS DISCOVERED.—The street in Chester known as Whitefriars is being drained. In the garden in front of a house occupied by Mr. Job Harrison, and at a depth of 5 feet to 6 feet, besides a great number of human remains, the site was found to be crossed in all directions by solid stone masonry; and one small piece of stone that has probably been a portion of a window has been turned up. The inference is, that these remains occupy the site of the cemetery of the church of St. Mary, attached to the Carmelite monastery of White Friars, which stood here in the thirteenth century. Some few years ago, at the back of Mr. Harrison's premises, many mouldings of highly decorative character were discovered ——Near the small village of Crœwent, Chepstow, Monmouthshire, some interesting remains of the Romans have recently been discovered. Extensive excavations in an orchard near the ancient church have disclosed the entire ground-floor apartments of a Roman house: the stone bath, the kitchen, fire-place, and even the flues were in excellent preservation. In one part a Roman tesselated pavement, 8 feet long by 3 feet wide, was discovered. Further excavations have been determined on.

PROPOSED SUSPENSION-BRIDGE AT SCUTARI.—A private letter from Constantinople, of the 6th inst. says:—"The proposition to construct a suspension-bridge from the heights of Pera to Scutari, made to the Porte some time since by an English engineer (Mr. Kennard, of London), has been approved, and it is to be hoped that the necessary formalities will soon be completed between the contracting parties, and that the work will be commenced without delay. . . The funds for this undertaking will be subscribed by an English company. The cost of the bridge is estimated at between 600,000*l.* and 700,000*l.*"—*Leader.*

The Liverpool Gas Question.— A committee of the town council has of late been making inquiry into the supply of gas, &c. in Liverpool. At a recent meeting of the committee, it was stated that the United Gaslight Company refused to admit Mr. Clegg, at the committee's instance, to inspect their works, or to allow their officers to attend the meetings of the committee. Mr. Reay, on behalf of the Guardian Society, said, one of the arguments used in favour of the amalgamation whereby the United Company was formed, was, that gas could be supplied to the public cheaper, and yet a period of eight years had elapsed since the Act of Amalgamation, and a reduction of 6d. only had been made, and that under pressure. The greatest charge he had made against the Gas Company was the incorrectness of their meters, and examinations which had been made fully established these charges, for every meter examined, but one, had been found incorrect, registering against the consumer. A report was submitted by Mr. Clegg, in which he stated that inferior gas will register more rapidly on the meter than gas of the specific standard. If, he continues, the old Gas Company persist in producing an inferior article, I see no other remedy than by a new company, who might erect works and lay mains, equal to the present demand, for 300,000*l*. A new company would be able to sell gas of twenty candles per four cubic feet per hour, for 3s. 6d. per 1,000, and make a dividend of 10 per cent.——The Gas Company have recently divided their usual profit of 10 per cent. for the half-year last past.

Dwellings of Farm Labourers.—At the recent meeting of the Northumberland Agricultural Society in Alnwick, the Duke drew attention to the propriety of improving the dwellings of hinds and other farm labourers. His Grace has for some time past been expending upwards of 50,000*l*. a year in rebuilding cottages, farm-houses, and outbuildings, and in draining lands on his estates in Northumberland.

Female Provident Assurance.—Amongst the many forms which are now being assumed by the assurance principle, there is none perhaps more interesting or more important in this country of preponderating female population, than that of the Female Assurance Company, recently established at 40, King William-street, London-bridge. By means of this association, heads of families may provide, by comparatively small payments for a few years, say for five years, means for all daughters who may remain unmarried at the age of fifty; or may, by similar payments, secure doweries on their marriage, or, failing that, provision at a certain age, such as forty-five or fifty. The assurance, in fact, assumes in this case various forms to meet possible contingencies. Thus, a young woman may secure her own provision for old age, or a provision may be secured at the time of marriage for every daughter that may be born and live till the age of forty, forty-five, or fifty, with an assurance of doweries for those who may be married at an earlier age. For example, a man marrying a woman of twenty-five, by paying a single premium of 15*l*. 1s. 8d. may secure 1,000*l*. for every daughter of the marriage, however many, payable at the age of forty-five, if unmarried. Or, again, if a sum of 3*l*. 10s. 8d. be paid yearly for five years only by or on behalf of a young woman aged twenty, she will be secured the sum of 100*l*. at fifty, should she reach that age without marrying, or, if preferred, may obtain a proportionate sum even at forty. At the age of ten, a sum of 2*l*. 9s. 6d. only for five years will secure the same advantages, and so on, thus opening up a way also of rendering birth-day presents, for instance, of greater or more permanent advantage. The principle, though novel, is based, it is alleged, on sound calculations from the Registrar-General's population and other returns. The president of the society is the Earl of Harrowby, and the vice-president Mr. Labouchere; and amongst the directors we observe such names as those of Mr. J. Bullar, Mr. W. Hawes, and other gentlemen of equal standing.

The Limerick School of Art.—A handsome testimonial, consisting of books on architecture and ornament, has been presented to Mr. Raimbach, the head master, by the students of the Limerick School of Art, accompanied by an address expressive of their regret at his removal, and appreciation of his former services. This school (as well as those at Belfast and Cork) remains closed in consequence of differences with the Department of Science and Art, which we trust will, however, shortly be arranged in a satisfactory manner.

The Timber Trade of the Mersey.—The arrivals of timber from British North America into this port for the week ending 22nd August, this year, compared with the same period last year, have been as follows:—

	Vessels.	Tons.	Pine Timber. In Logs.	Deals. Pieces.
1855	25	20,793	4,247	417,804
1854	34	25,613	14,140	254,745

—*Liverpool Times.*

A Village lighted with Natural Gas.—In the western part of the State of New York, the village named Fredonia, has been lighted with gas, which ascends through fetid limestone strata, from beds of bituminous coal it is supposed. The flame is not very brilliant, but pleases the inhabitants, who have it supplied from a gasometer placed over an inch and half bore through the rock. One hundred lights are supplied at a dollar and a half yearly for each.

Antiquities discovered at Rome.—A letter from Rome mentions some fresh discoveries, among which are two columns, one of alabaster, and the other of marble, dug up in the Via della Scrofa, and a granite column, 20 feet long, with a well-preserved Corinthian capital of marble.

The Leeds Borough Surveyorship.— Mr. Tilney, the architect and surveyor to the Leeds corporation, has resigned his office, in consequence of their refusal to increase his salary from 300*l*. to 500*l*. The corporation resolved thereupon to advertise for a new surveyor, at a salary of 200*l*.

New Stucco.—M. Claudot, a French architect, has invented a composition of marble coating, of greater or less thickness, formed by the laying upon a surface of stone, plaster, or other analagous materials, of successive layers of milk of lime, compressed and smoothed, and then polished until the hardness and brilliancy of marble are obtained; also, the addition of carbonic acid thrown upon these surfaces, and the mixing of colours with the milk of lime, in order to produce coloured marbles, &c.

Fatal Accident at Durham.—Mr. J. Sinclair, contractor of the Aucland Branch Railway, Durham, has been killed, owing to the fall of a stone from a viaduct which is being erected. This, it is said, is the seventh life that has been lost since the commencement of these works.

Metropolitan Parks.—A parliamentary return published recently gives some particulars about the metropolitan parks. Their extent is as follows, in acres (omitting roods and perches):—Kensington-gardens, 261; Hyde-park, 388; St. James's-park, 91; Green-park, 60; Regent's-park, 472; and Victoria-park, 265. The total outlay upon the last-named has been—from the Department of Works, 8,809*l*.; and from that of Woods and Forests, 140,000*l*.

Sale of Gas Works.—According to the *Mining Journal*, Mr. W. Thompson submitted for sale by auction, at Garraway's Coffee-house, on Thursday week, a large plot of leasehold ground, with wharfage and frontage to the Thames, situate at Northfleet, in Kent. Upon the work are erected a retort-house, working six retorts, capable of being enlarged to fifteen, enclosed by iron doors; a gas-holder for 20,000 cubic feet, with condensers, two purifiers, and apparatus complete for carrying on the business of a gas manufacturer, together with a large coal-store, seventy-three consumers' meters, and about 220 chains of mains and pipes, together with a small gasometer for testing the accuracy of meters. The whole of the above were included in the purchase. The property was held for 151 years, from September 1851, and was sold for 2,350*l*.

Suggested Middlesex Archæological Society.—A society under this title is in course of formation, for the purpose of investigating the history and antiquities of the metropolitan county. With all respect for the opinion of some of the gentlemen who are named as forming the provisional committee, the establishment of this society would seem to be almost an act of supererogation. Middlesex is the seat of the parent Society of Antiquaries, of the British Archæological Association, and the Archæological Institute, and one or all of these bodies should be worked upon to do what may be necessary in this county.

Doncaster Church Fittings, &c.—The committee for rebuilding St. George's Church have accepted the tender of Mr. Ruddle, of Peterborough, for the execution of the whole of the oak roofs and seating. The amount of the contract is 10,259*l*.

Roads and Drains.— The following strange tenders were delivered at the office of Mr. Lee, for making roads and drains on an estate at Putney, for Mr. J. T. Leader:—

Yeoman	£1,361	0	0
Keys	1,100	0	0
W. and R. Aviss	1,057	0	0
Radley	1,019	0	0
Strickson	942	18	0
Simpson and Markwick	863	0	0
Brown	855	0	0
Rogers	839	0	0
Smith	832	0	0
Lee and Lavers	800	0	0
Adamson and Sons	793	19	0
Whitfield and Carnester	716	0	0
Harding	705	10	0
Carlyle and Co.	654	9	6
Culverhouse and Nicholson	596	0	0

Master and Workman in France.—A singular and important case of coalition on the part of journeymen, for the purpose of putting a stop to work in factories, occupied the Correctional Tribunal of Paris the week before last, and ended in the conviction and imprisonment of a number of workmen. The combination took place amongst the bronze-casters, who dreaded a return to the practice of powdering the moulds with charcoal, as productive of disease in the lungs. This practice had been discontinued in favour of meal (fécule), which, however, had been found to be otherwise objectionable. According to the French law, such combinations are illegal, whatever be their ostensible purpose. Sixty-one men, including, by the admission of the public prosecutor, some of the most respectable journeymen in Paris, were tried and found guilty, with the exception of four, and sentences of imprisonment, ranging from two years to fifteen days were pronounced. It is believed the Emperor will remit the sentences, or mitigate them at least.

The Somersetshire Archæological Society have been meeting at Dunster, but we are unable to afford space in our present number for any account of their proceedings.

Galvanized Iron Roofing.— Messrs. Tupper and Carr, of Mansion House-place, have patented some improvements in the construction and arrangement of coverings for buildings. The invention consists in constructing tiles of galvanized iron, or any other suitable material, each tile being turned up longitudinally at its two opposite sides, so as to form a species of tubular beading.

A simple Washing Machine.—At most American warehouses may be seen a simple contrivance for saving the knuckles of washerwomen, namely, a board about 18 inches by 14 inches, with the surface cut into smooth ribs on one side. The clothes are rubbed across the ribs of this board. The same plan is adopted in Germany and other parts of the continent

TENDERS

For a first-rate house in Finch-lane, City; Mr. Thos. Hague, architect:—

Jay	£7,737	0	0
Lucas	7,600	0	0
J. and C. W. Todd	7,559	0	0

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

TO ARCHITECTS AND OTHERS.

A GENTLEMAN who has been in practice for himself, desires an ENGAGEMENT as GENERAL CLERK, or to take the direction of an office. Undeniable references. Expectations moderate.—Direct, A. L. M. Office of "The Builder."

AGRICULTURAL MACHINES.—CLERK and BOOK KEEPER WANTED Salary required, and testimonials as to competence in this particular trade, to be sent, prepaid, to COOKE and WHITLEY, Advertising Agents, 58, Lombard-street, London.

TO PARENTS AND GUARDIANS

A TIMBER MERCHANT has a VACANCY for a youth as ARTICLED PUPIL, who will have unusual facilities afforded him of obtaining a thorough knowledge of the trade in all its branches. References to bankers and others. £1 per week allowed in lieu of board and residence with his employer. A premium expected.—Address, N. O. Roberts's Library, 2, Arabella-row, Pimlico.

TO PARENTS AND GUARDIANS.

AN Architect and Surveyor, in good practice, has a VACANCY for an ARTICLED PUPIL. A taste for drawing and genteel address indispensable.—Apply to J. G. Burr 81 Edmunds, Suffolk.

FOREMAN.—WANTED, a first-rate WORKING FOREMAN, to take entire charge of the repairs and alterations to two houses in the neighbourhood of Portman-square.—Apply, by letter only, stating qualifications and terms, to J. B. 72, Seymour-place, Bryanston-square.

TO CARPENTERS AND JOINERS

GOOD WORKMEN can find EMPLOYMENT by applying to Mr. J. WRIGHT, Foundation-street, Ipswich.

STONE CARVERS WANTED immediately. None need apply but those well acquainted with the Mediæval Art. A clever Youth wanted as an Apprentice.—Apply to Mr. BOULTON, 191, Carlisle-street, Lambeth.

TO CIVIL ENGINEERS.—Gentlemen of the above profession having a VACANCY for an ARTICLED PUPIL, are requested to apply by letter, pre paid, to H. E D. Office of "The Builder."

TO BRICKLAYERS' FOREMEN

WANTED, immediately, a WORKING FOREMAN, to take charge of a job of 4 cott.—Apply, by letter, stating terms and with references, to A. at Gardener's Library, Guildford.

TO FOREMEN OF STONEMASONS

WANTED, a good WORKING FOREMAN in a country yard, who thoroughly understands setting out work and management of hands. Lasting employment and constant employment.—Apply, stating terms, age, and reference, to A. Andrew's Library, Guildford, Surrey.

TO BUILDERS' CLERKS.

WANTED, in a Builder's Office, a respectable Young Man as CLERK. None need apply but those who have been engaged in a similar situation for two years. Apply, by letter only, to R. I. Office of "The Builder," stating age, salary required, and where last employed.

WANTED, a steady Man, as TIMEKEEPER and PORTER, who has some experience in smiths' work. Good references required as to character.—Apply by letter only to A. O. care of Saunders, Brothers, Newspaper Agents, 106, London-wall.

WANTED, an expert DRAUGHTSMAN, who understands Gothic thoroughly.—Apply by letter, stating terms, &c. addressed R. U. S. Wyld's News-room, Leicester-square.

TO DECORATORS AND OTHERS

WANTED, an active, clever, and industrious SALESMAN, to take orders, and do the working portion of a business, or to take the entire management if competent. He must well understand the manufacture, sale, and application of decoratives, for Paper-hanging, Graining, and other trade workmen, styles, gilding, furniture, upholstery, &c. &c.; sketch and estimate correctly and quick, and be a good bookkeeper. Security will be required.—A letter, with full particulars, real name and address, to F. L. 14, Brewer-street, Golden-square, will be attended to, and none other.

N.B. This will be found an advantageous employment to a young active man of real use and honest purpose, and may lead to a share in the business.

TO BUILDERS AND PLUMBERS.

WANTED, by a respectable Young Man, a SITUATION as good PLUMBER, and will fill up his time in painting, if required. Good references can be given.—Address, post paid, to T. G. 23, North-street, Manchester-square, London.

TO CARPENTERS, &c.

WANTED, to APPRENTICE, a YOUTH, 15 years of age, who is very desirous of learning the trade, and where he will have a good opportunity of doing so. To-doors.—Address, with particulars, to R. S 34, Newington-causeway.

TO BUILDERS AND CONTRACTORS

WANTED, by an experienced Builder's Foreman, a SITUATION as Walking or General Foreman, or charge of Works. Present engagement terminating shortly.—Address, J. P. Mr. Seward's, Undertaker, Bath-street, City-road.

WANTED, by a Draughtsman, who has just completed an engagement with an extensive engineering firm, a SITUATION in a Civil Engineer's Office.—Address, W. B. Post-office, Dudeston-row, Birmingham.

TO TIMBER MERCHANTS AND OTHERS.

WANTED, by a respectable Middle-aged Man (who is about to leave his present employer), a SITUATION as FOREMAN or SALESMAN in a Timber-yard, having been in that capacity for many years; would not object to travel, and make himself generally useful.—Address, post paid, A. X. 8, Mydd leton-place, St. John-street-road, Clerkenwell.

TO BUILDERS, &c.

WANTED, by a confidential Person, a SITUATION as Foreman or Manager in a Builder's Establishment. Has been in the business for the last fifteen years.—Apply to A. B. at Mr. Hawker's, No. 9, Desborough-terrace, Harrow road.

WANTED, by a Middle-aged Man, a SITUATION as OUT-DOOR FOREMAN, or to superintend a New Building, or to engage himself with a Private Gentleman. Thoroughly understands repair and dilapidation. Satisfactory references will be given. Country preferred. Direct, pre-paid, to A. N. 15, Princes-road, Homerton New-town.

WANTED, by a good Grainer and Writer, a SITUATION in London; can give a reference to a first-rate establishment, where he has been constantly engaged as grainer and writer during the last five years. The Advertiser is not out of situation, but wishes to engage with a metropolitan house for some time.—Address, G. W. Post-office, Stretford New-road, Hulme, Manchester.

WANTED, by a respectable Man, a SITUATION as Manager in a Builder's Business, or General Superintendent of the Out-door Works. Has been many years engaged in extensive works. Aged 37. Noblemen, and gentlemen building on their Estates would find the Advertiser well qualified to take the entire management. Unexceptionable references given.—Address, W. H. care of Mr. Jullyan, Builder, Camberwell.

TO PUBLIC COMPANIES AND ENGINEERS

WANTED, by a Young Man of considerable experience, a SITUATION as CONFIDENTIAL or CORRESPONDING CLERK; would have no objection to go abroad, and can give satisfactory references.—Address, V. Y. Office of "The Builder."

TO COUNTRY BUILDERS

WANTED, by a good Modeller and Plasterer, a SITUATION in the country. Terms moderate. Address, ALPHA, Office of "The Builder."

TO DECORATORS AND BUILDERS.

WANTED, by a Young Man, aged 20, a Painter, who has a good knowledge of Grai ing, a constant SITUATION. Good reference. No objection to the country. Address pre paid, Z. Y. 15, Mar.-street, Hampstead road.

TO ARCHITECTS, SURVEYORS, LAND AGENTS, AND OTHERS.

THE Advertiser, a fair Draughtsman, Accountant, &c. is desirous of an ENGAGEMENT As improvement is an object a moderate salary will be accepted.—Address, F. W. Office of "The Builder."

TO ARCHITECTS, &c

THE Advertiser wishes for an ENGAGEMENT, partial or otherwise; if with a prospect of partnership or for a permanent term, salary not a consideration.—Address, C 3, Tweed Villa, Grove lane, Camberwell.

TO ARCHITECTS AND SURVEYORS

THE Advertiser is desirous of a SITUATION in either of the above offices; he has been accustomed to prepare fair, working, detail, and other drawings, measuring up works, &c. No objection to the country.—Address, L. M. Mr. Hunter's, 7, Hereford-road, Westbourne-grove.

TO MANUFACTURERS, BUILDERS, AND OTHERS.

THE Parents of a respectable Youth wish to place him where he would acquire a practical knowledge of the business.—Address, G. T. Mr. Turner's, the Cock Inn, Clapham, Surrey.

AS YARD FOREMAN OR CLERK.

THE Advertiser is fully competent to undertake the management of a contractor's, builder's, or brickmaker's yard, to receive and send out materials, manage the carts, take men's time, &c. He thoroughly understands the management of horses. Unexceptionable references as to industry and integrity can be given.—Address, M. N 27, Aldersgate street.

THE Advertiser, aged 22 years, who will shortly leave his situation in a Builder's Office, where he has been entrusted with the general management for the last two and a half years, would be glad of a similar ENGAGEMENT; or in a Merchant's Office. Has been entrusted with the collecting of rents, and understands bookkeeping. Unexceptionable reference to present employer.—Address, prepaid, to W. R. Mr. Darton's, 17, Sussex-street, Tottenham Court road.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

THE Advertiser is desirous of an ENGAGEMENT in either of the above offices. He is a good draughtsman, can take out quantities, measure and superintend work, and perform the duties required. The highest references given.—Apply by letter, J. W. 8, Sandwich-street, Brunswick square.

THE Advertiser, aged 27, is anxious to FILL UP a FEW HOURS per day, or occasionally at his own residence, or in a surveyor or builder's office, in PREPARING WORKING or FINISHED PLANS, Specifications, Bills Engrossing, or the general routine of either office.—Address, MIRANDA, Mr. Dixon's, 2, Manor-place, Holloway.

TO ARCHITECTS.

THE Advertiser, who has been upwards of six years in the profession, wishes for an ENGAGEMENT. Is well acquainted with Gothic Architecture, and is a good perspective draughtsman.—Address, B. A. Y. 105, East-street, Manchester square, London.

PLUMBER.—WANTED, by the Advertiser, carrying on business in one of the Channel Islands, a first-rate PLUMBER. A steady, active man, with good character, will meet with a comfortable situation, at liberal wages.—Apply by letter only, to R. S. T. care of Messrs W. Robertson and Co. Falcon-wharf, Holland-street, Blackfriars.

EVENING EMPLOYMENT WANTED, in a Builder's or Carpenter's Office, or Three Days in each Week. Practically acquainted with and qualified for the arrangement of back accounts, book keeping, drawing, &c. Satisfactory references.—Address, ALPHA 20 News-rooms, 66, Cheapside.

DRAUGHTSMAN and BOOK-KEEPER.—To Cabinet makers, Upholsterers, and Others. A practical DRAUGHTSMAN, and one thoroughly conversant with CLERK of WORKS'S in the office. No objection to the country. Address, ARCHITECT, 54, Aldersgate st eet.

A YOUNG MAN is desirous of an ENGAGEMENT with an Architect, where he may obtain further improvement in the profession, which would be considered part remuneration for his services. He is a good draught-man and colourist, and understands perspective.—Address, BETA, care of Mr. Hammond, 27, Lombard-street.

TO PLUMBERS.

A YOUNG MAN, aged 25, wishes to Article himself for a short term to a Plumber, to learn the business; has a good knowledge of the business, having been an itinerant served occasionally as labourer for the last four or five years. 3l will be given as a premium.—Address, G. S. 12, Harland-square, Philip-street, Kingsland-road.

A LAND SURVEYOR, DRAUGHTSMAN (engineering or architectural), &c. requires an ENGAGEMENT for a short term. Is steady, of good address, and has been accustomed to town as well as field work. Testimonials, references, &c. Terms, 3s. per day.—Address (prepaid), H. B Office of "The Builder."

TO BUILDERS.

A YOUNG MAN, of business habits, who has a knowledge of Builders' Accounts and Drawing, wishes to meet with a SITUATION in a Builder's Office. Improvement more an object than salary. References as to respectability, integrity, &c.—Address, ALPHA, 30, Huntingdon street, Barnsbury-park.

TO PLUMBERS, BUILDERS, &c.

A GOOD PLUMBER wishes to meet with a PERMANENT SITUATION, in town or country; has no objection to make himself generally useful, as he understands the three branches.—For further particulars, address G. S. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, BUILDERS, &c.

A RESPECTABLE and industrious Young Man, engaged in the profession seven years, is open to an ENGAGEMENT as GENERAL ASSISTANT with either of the above. Unexceptionable references will be given, and a moderate salary only required.—Address, W. L. Post-office, King William-street, City.

AN efficient CLERK of WORKS is open to an ENGAGEMENT. The highest testimonials can be given.—Address ZETA, Mornington Library, Mornington-street, Hampstead-road.

TO ARCHITECTS AND SURVEYORS.

A GENTLEMAN of great experience in the Profession is desirous of an ENGAGEMENT.—Address, F T. Office of "The Builder."

TO SURVEYORS, ARCHITECTS, AND ENGINEERS.

A GENTLEMAN who is thoroughly acquainted with the business of an office, and field-work in the above profession, is in WANT of a SITUATION. He is a superior draughtsman. Unexceptionable testimonials as to character and ability. Terms moderate.—Address, free, to A B. Mr. Williams, 18, Diamond-row, Southampton street, Camberwell.

TO LANDOWNERS, CIVIL ENGINEERS, ESTATE AGENTS, SURVEYORS, AND OTHERS.

A SURVEYOR of many years' general experience, who has also had considerable practice in civil engineering and architecture, and is competent to the management of an estate, an office, or works, is open to a RE-ENGAGEMENT at home or abroad, or to enter into Partnership where an active partner is required.—Address, W. J. News-office, 10, Tottenham-court-road.

TO BUILDERS AND MASTER PAINTERS.

A RESPECTABLE Young Man wishes for an ENGAGEMENT as Grainer and House Painter. Respectable references can be given.—Address, by letter, B. Office of "The Builder."

TO ARCHITECTS.

A CLERK of WORKS, who has for many years had charge of very extensive buildings in town and country, is DISENGAGED.—Address, B. E. E. care of Mr. ARMITAGE, Paper-hanger, Shoreditch.

TO ARCHITECTS.

A GENTLEMAN, 25 years of age, of considerable experience under first-rate architects, both in the out door and in-door branches of the profession, in town and in the country, and who has practised occasionally on his own account, is desirous of an ENGAGEMENT as ACTIVE JUNIOR PARTNER or PRACTICAL MANAGER to one who may require such assistance.—Apply, prepaid, to Mr. Z. O. A 6, Newington-crescent, Kennington road, London.

TO ARCHITECTS ONLY.

A CLERK of WORKS.—Wanted, a SITUATION as above.—The Advertiser, aged 33, is duly qualified—thoroughly practical, and can be well recommended.—Address, E. F. A. Mr. Cooper's, Post-office, Camaburgh street, Regent's-park, London.

TO ESTATE AGENTS.

A YOUNG MAN from the country is desirous of obtaining a SITUATION as CLERK in an office of the above.—Address, S. G. 14, Robert-street, Grosvenor-square.

TO PLUMBERS.

A YOUNG MAN, eighteen years of age, wishes to APPRENTICE himself for three or four years to a respectable Plumber.—Address, E B. Curtice's Library, 3, Morrton terrace, Pimlico.

AN ITALIAN ARCHITECT is desirous of an ENGAGEMENT in an Architect's Office, as Architect or as Draughtsman. Is conversant with perspective and working drawings. Salary not a primary consideration.—Address, stating salary, C. B. 3, Clifton-street North, Finsbury-square.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer and is about 60 per cent cheaper than the leather hose pipe. Manufactured only by WAITHMAN & Co. Bonham, Lancaster.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings. Groups, statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition, and will be found to be a different material to that now being imitated by puffers and manœuvrers, with only three or four years' experience, and without practical knowledge. Some of the works recently completed by M. H. B can be referred to the whole of the embellishments to the external part of Clifden House, his Grace the Duke of Sutherland's, also Tottenham and Kingsland Churches, the turrets to the Camden-road Chapel, containing from 3,000 to 4,000 feet cube; the colossal Britannias, 32 feet high, at the County Fire Offices, Cornhill and Lombard-street; the Arms, with the allegorical group, at the Kent Mutual Insurance. Queen-street; and other works elsewhere, too numerous to mention. A large Block of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Burdilla, dove, black, black and gold, Sienne, St. Ann's, statuary, serpentine, verd antique, Portland, Harehill, Park spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England. THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden and Hall Statues, Vases, Tazzas, Consoles, &c. executed and delivered at reasonable rates. For further particulars apply at the Offices of the Company, 18, Cannon-street, City.
WILLIAM W. BONNIN, London Secretary.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 29, Surrey-street, Strand.
HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London

TO SCULPTORS, MARBLE MASONS, and BUILDERS.—Now landing, from barges at Whitehall-wharf, ex *Conquest*, from Leghorn, upwards of FIFTY BLOCKS of fine STATUARY, for figures, VEIN and SICILIAN. Mr. FRANKLIN begs to call attention to the above, also to his extensive stock of marble, in blocks and slabs; consisting of statuary, vein and Sicilian, Irish Green and Black, Dove, Bardilla, Sienna, Brocatella, Rouge Royal, St. Anne's, Emperor's Red, Black and Gold, &c. which he is enabled to offer on advantageous terms.

TO SCULPTORS, MARBLE MASONS, and BUILDERS.—Now landing from barges at Whitehall-wharf, ex Conquest, from Leghorn, upwards of FIFTY BLOCKS of fine STATUARY, for figures, VEIN and SICILIAN. Mr. FRANKLIN begs to call attention to the above, also to his extensive stock of marble, in blocks and slabs; consisting of statuary, vein and Sicilian, Irish green and black, dove, Bardilla, Sienna Brocatella, rouge royal, St. Anne's, Emperor's Red, black and gold, &c. which he is enabled to offer on advantageous terms.—Depôt, Whitehall-wharf, Parliament-street, Westminster, London.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the best marble at the lowest prices.—Yard, Stone Slabs, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Cannon Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.

DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

IMPERIAL LIFE INSURANCE COMPANY, 3, OLD BROAD-STREET, LONDON. Instituted in 1820.
WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDSON, Esq. Deputy-Chairman.
The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.
FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.
ONE-THIRD of the premium on insurances of 500l. and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of 50l. and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.
SECURITY.—Those who effect insurances with this Company are protected by its subscribed capital of 750,000l. of which 140,000l. is invested, from the risk incurred by members of Mutual Societies.
The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

At the close of the last financial year, the sums assured, including bonus added, amounted to	£2,500,000
The premium fund to more than	800,000
And the annual income from the same source, to..	109,000

Insurances, without participation in profits, may be effected at reduced rates. SAMUEL INGALL, Actuary.

PELICAN LIFE INSURANCE COMPANY, established in 1797.
70, Lombard-street, City, and 57, Charing-cross, Westminster.

DIRECTORS.

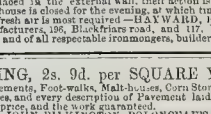
Robert Gurney Barclay, esq.	Thomas Hodgson, esq.
William Cotton, esq. F.R.S.	Henry Lancelot Holland, esq.
John Davis, esq.	J. Petty Muspratt, esq.
Jas A. Gordon, M.D. F.R.S.	C. Hanbury Tracy, esq. F.R.S.
Henry Grace, esq.	Matthew Whiting, esq.
Kirkman D. Hodgson, esq.	M. Wyvill, jun. esq. M.P.

The Company offers—
Complete Security—
Moderate Rates of Premium with Participation in Profits—
Low Rates without Profits.
BONUS.—Four-fifths or Eighty per Cent. of the Profits are divided amongst the Policy holders.
LOANS in connection with Life Assurance on approved security.
ANNUAL PREMIUM required for the Assurance of 100l. for the whole term of life:—

Age.	Without Profits.	With Profits.	Age.	Without Profits.	With Profits.
15	£1 11 0	£1 15 0	40	£2 18 10	£3 6 5
20	1 13 10	1 19 3	50	4 0 9	4 10 7
30	2 4 0	2 10 4	60	6 6 1 0	6 7 4

For Prospectuses and Forms of Proposal, apply at the Offices as above, or to any of the Company's Agents.
ROBERT TUCKER, Secretary.

SECURITY TO EMPLOYERS.



THE TIMES ASSURANCE COMPANIES:
To Clerks and others guarantees at the lowest rates.
Plate Glass Assurance.—Windows, mirrors, &c. insured against breakage.
Every description of life and fire assurance.
Apply to the Manager, 23, Ludgate-hill.

INDISPUTABLE LIFE POLICY COMPANY, 72, Lombard street, London.
LORD VISCOUNT TORRINGTON, Chairman.
The Policies of this Company, being indisputable in terms of the Deed of Constitution, registered in conformity with the Act, 7 and 8 Vict. c. 110, by which this Company is incorporated, form FAMILY PROVISIONS and NEGOTIABLE SECURITIES; their validity not being dependent (as in the case of ordinary policies) on the import of previous, and perhaps forgotten statements, reports, and other documents.
ALEX. ROBERTSON, Manager.

THE OBJECTS MOST TO BE DESIRED IN EFFECTING A LIFE ASSURANCE.—These are, Perfect Security and the Largest Benefits in proportion to the Contributions paid. They are both fully attained in the SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY, which is now of twenty-four years' standing and possesses accumulated funds, arising from the contributions of members only, to the amount of 700,918l. and an annual revenue of 165,294l.
The MUTUAL PRINCIPLE being adopted, the entire surpluses or "Profits," as ascertained triennially, are allocated in addition to the sums assured, and they present a flattering prospect to the members. For example: the sum now payable on a policy for 1,000l. effected in 1831, is 1,583l. 6s. 9d. being a return of seventy-one per cent on the premiums paid on middle-aged lives, and policies effected in later years are similarly increased.
The NEXT TRIENNIAL DIVISION OF PROFITS will take place on 1st MARCH, 1856, and policies effected previously will receive one year's additional bonus over those opened after that date.
ROBT. CHRISTIE, Manager.
WM. FINLAY, Secretary.
Head Office—26, ST. ANDREW SQUARE, EDINBURGH.
Office in London—126, BISHOPSGATE-STREET.
Agent—WILLIAM COOK.

LOOKER'S PATENT TUBULAR VENTILATOR is the CHEAPEST and most ORNAMENTAL yet introduced for effectually admitting pure air without a perceptible draught. Decorated to suit any building or apartment.—Particulars and prices may be obtained, and specimens seen, at the Office of Mr. J. PATMAN, Architect, 4, Bank-in-inn, LEEDS; or on application to BENJAMIN LOOKER, jun. Patentee, Kingston-on-Thames.

VENTILATION.—PURE AIR.

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed on the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.
Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

This Paint possesses in an eminent degree the following advantages over all other known Pigments:—
INDESTRUCTIBILITY BY HEAT—PRESERVATION OF IRON FROM OXIDATION, WOOD FROM DECAY, AND MASONRY AND BRICKWORK FROM DAMPNESS—PERMANENCE OF COLOUR AND FREEDOM FROM DELETERIOUS PROPERTIES—SUPERIORITY OF BODY.

The Protoxide Paint, as at present produced, is of one shade of colour, viz.:—a pale drab, but it may be tinted with any other colour to suit the taste and purpose for which it may be required. It is not affected by sulphuretted or carbureted hydrogen gas, bilge water, or indeed foul air of any kind, and is therefore well adapted for the interior of Ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.—Sole authorized Agents for England:

MESSRS. C. GRABHAM AND CO. 4, BARGE-YARD, BUCKLERSBURY, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc can be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK, LONDON PATENT. And if not so marked, the quality is not warranted. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in use *marked*; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to Inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT, 6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly, is now supplied by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties. It is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS Millbank street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for home and foreign trade. Portland cement is manufactured at these works with special reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no grinding. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of this Parian under patent, and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Park, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Nails, Firebricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Carrolano

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by D. & J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied or shipment, on advantageous terms.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour resembling the Bath stone.—CHARLES RICHARDSON, 6 South Wharf, Paddington.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the quality manufactured on the above works. Also STOCK and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise. Apply to G. BOOTH, Agent, as above.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enables them thereby to transmit all orders they may receive to any station on the before mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on a moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be sticked to the head of each cask.—Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

SOUTHAM BLUE LIAS LIME and PORTLAND CEMENT WORKS OLDHAM and TATHAM are now prepare to receive orders from contractors, builders, and merchants for Ground and Lump Blue Lias Lime, also for Portland Cement and Lias and Bath Cement, both of which will be found of very superior quality, and will be improved by the addition of two or more parts of sand to one of cement. IO and T.'s boats can run alongside any wharf or works, and all orders addressed to Warwick will receive prompt attention.—Office, Warwick

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), and NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Woodham hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers—Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 6a, King William street, City, London. Also has been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE. I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c. Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Maclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor, and, therefore, not the "Roman cement" of "Jurus," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tilleries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 28s. per 1,000; floor bricks and 6-inch pavings, at 25s. 6d. per 1,000; 9-inch pavings, at 37s. 6d. per 1,000; 8-inch pavings, at 27s. 6d. per 1,000; 7-inch pavings, at 22s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

DUTCH CLINKERS, 32s. per thousand, by the best Makers.

WELSH, STOURBRIDGE, AND NEWCASTLE FIRE-BRICKS, LUMPS, AND TILES, at much less than cost prices. The BUSINESS to be DISPOSED OF, with the valuable premises, and a portion of the PREMISES to carry on the same, TO BE LET, at almost a nominal rent.—For particulars inquire on the premises, Hondurus Wharf, Bankside, Southwark, London.

BRICKS.—To Builders and Contractors.—Capital Hard burnt GREY STOCKS, of good colour, GRISSELS, and PLACE, at very reduced prices. Cash. J. F. SMITH, Further Field, Acton Bottom, near Shepherd's Bush.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, using the chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and flare bricks, fire goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

GREAT NORTHERN WHARF, York-road, King's-cross. WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 26s. per thousand; Grizzles, 30s. per thousand; Rough Stocks, 28s.; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any white matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS

OOWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE, 5, ADELAIDE-PLACE, London bridge.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Fire Goods, &c. of the description required, and of best quality. WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent.—Mr. J. UNWIN, Private Residence, 30, Nelson square, Blackfriars-road.

BRICKS.—Builders wanting Bricks of good colour, are solicited to call on B. PARKS, Lewisham, and see the quality at low prices. Carriage within six miles on the most reasonable terms. Red facing bricks 20s. 30s. and 35s. per kiln of tiles, paving bricks for even building, salt glazed stone pipes manufactured; also all kinds of red pipes and pots.—Application by letter punctually attended to.

FOR IMMEDIATE SALE.—FIRE BRICKS, LUMPS, TILE, and TERRA COTTA.—SAMUEL THICKETT has received a large consignment of the above goods for sale. Apply on the premises, Stone-wharf, Isle of Dogs.—Dealers and large consumers liberally dealt with

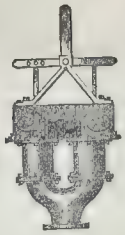
TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, at very low prices, a large quantity of very hard BUILDING BRICKS, TILES, and PAVING WARE; also, 3, 4, 6, 9, and 12 inch red Socket Drain Pipes, in 2 feet lengths.—Apply to St. JOHN HEWITT, Redhill Works, Southampton

CLAY ARCHITECTURE.—To NOBLEMEN, ARCHITECTS, BUILDERS, and OTHERS.—A PATENT has been taken out by JOSEPH ARNOLD, Tamworth, Blue Brick and Tile Manufacturer, for making ORNAMENTAL BRICKS of any pattern, whatever, on a raised ground, with the same accuracy as a seal upon wax. By this novel invention the pattern is made with the brick, the clay is prepared by the moulder, which produces, when burnt, an imperishable article, ornamental window heads and sills, large bricks for plinths, and facings chamfered, common size bricks, grape and vine, herringbethon, or any other pattern. The patentee can make them blue, red, or strawberry colour. His large paving bricks, 18 by 9 inches, and 3 inches thick, on a depressed Mosaic pattern, to prevent slipping, and carry off the rain, only require being seen to supersede the flagging now in use, being imperishable. For the foundations of large public buildings, bridges, Government premises, bricks are made 18 by 6 inches, 6 inches thick, weighing nearly 36 lbs. of this superior material. The time has now arrived when the exterior of our public and private buildings may equal, if not exceed the interior decorations in the hands of architects, as there is no limit to design.—Specimens of these articles may be seen in the Inventor's Gallery, Crystal Palace, Sydenham; or at his Metal of Earth Works, on the Watling-street-road, Wilnecott, within three minutes' walk of Wilnecott station, on the Midland Railway, and two miles from Tamworth Station, Trent Valley line.—Church-street, Tamworth, August 8, 1855.

TO ALL POTTERS, CHINA, AND BRICK AND TILE MAKERS.

HANDS'S GREAT ECONOMISING PATENT KILN.—The merits of this kiln are so to economise the heat in time of burning and cooling for drying purposes, to enable one person so employed to keep up the works all the year round if he please, without any additional cost of fuel beyond the consumption of about six or seven tons of coal to burn off about 3,000 of goods in each kiln. Any persons engaged in the above works, and desirous of availing themselves of this opportunity for license or otherwise, apply to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom, Surrey.

LOANS, at Five per Cent. in connection with Life Assurance, on personal security, for one, two, or three years, repayable by instalments. ENGLISH and FOREIGN LIFE ASSURANCE OFFICE, 13, Oxford-street.



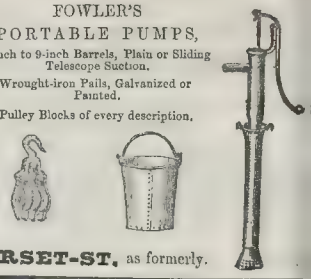
FOWLER'S
IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, at 15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION, in various plain and ornamental patterns, for square and market-places, roads, reservatories, liquid manure, ship, barge, brickmakers, contractors, gold-diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors &c. &c.; Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

ON SALE SINGLE PUMPS, BARRELS AT SHORTEST FOR HAND STEAM



AND HIRE, AND DOUBLE 3 in. to 15 in. to any depth, NOTICE, OR POWER.

FOWLER'S
PORTABLE PUMPS,

3-inch to 9-inch Barrels, Plain or Sliding Telescope Suction.

Wrought-iron Pails, Galvanized or Painted.

Pulley Blocks of every description.

BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocks and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and regged on a new system, which gives a superior tone and facility for ringing

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, holding a large number of patents relating to the construction and reparation of the permanent way of railways, are at all times ready to communicate on the subject and to grant licenses for their use. From the facilities thus afforded to companies to negotiate for a number of inventions much trouble and chance of litigation is avoided. The Company undertake arrangements for bringing new inventions on the subject before the public, upon terms advantageous to the proprietors of patents.—Applications may be made to CHARLES MAY, F.R.S. the Manager; or to WILLIAM HOWDEN, Secretary.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, elect-street, London.

These Pencils are prepared in various degrees of hardness and shades.

H H H H for drawing on wood.
H H H for architectural use.
H H for engineering.
H for sketching.
H B hard and black for drawing.
M medium.
F F light and shading.
F for general use.
B black for shading.
B B ditto ditto.
B B B ditto ditto.
B B B B ditto ditto.

Sold by all the principal Stationers in town or country.

TO WATER COMPANIES AND PLUMBERS

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

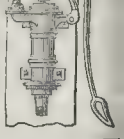
These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 330 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO BUILDERS AND PLUMBERS.



The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

PATENT METALLIC LAVA.

A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALT

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Black-wall. Orders executed from the above place, from Falcon-wharf, 80, Bankside, Blackfriars, and from Marion-bridge-wharf, Stratford, Essex.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 1, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

SALES BY AUCTION.

TWICKENHAM.—To Builders and Persons wishing to build for their own occupation or as an investment.—Valuable Land, with extensive frontage, and Two Ground Rents, amounting to 70l. per annum. By Mr. MASON, at GARRAWAYS, on TUESDAY, SEPTEMBER 25th.

FIFTY PLOTS of FREEHOLD BUILDING GROUND, delightfully situate, near the new church, Twickenham, a short distance from Pope's Villa; four and a half acres are open site Wellesley House, nearly adjoining Sir Wm Clay's Park, two and a half acres are between the upper and lower roads; gravelly soil and good water; eligible for villa residences, with a railroad station half a mile distant. Also a well-secured rent of 18l. issuing for two houses, already built on part of the estate, annual value, 70l.; and another ground rent of 52l. from a piece with 18½ feet frontage, 45 to the Legacy, this is an erect eight villas, worth 330l. a year.—May be viewed on application to Mr. PENDRY, at the Prince Albert. Particulars had of the Auctioneer, Northfalgate.

MARYLEBONE.—TO BUILDERS, SCULPTORS, MARBLE MASONS, &c.

MESSRS. THOMPSON and HOLMES beg to inform the Trade that their PUBLIC AUCTIONS of MARBLE will take place on the following days:—
MONDAY, 3rd SEPT. 1855. MONDAY, 1st OCT. 1855.
MONDAY, 5th NOV. 1855.

Catalogues and further particulars to be had on application one week previous to each sale.—The MARBLE WHARF, Thames Bank, Pimlico, at the foot of VAUXHALL BRIDGE.

ON THE HIGH ROAD, STRATFORD.—TO BUILDERS AND OTHERS.

MR. F. G. DEBENHAM will SELL by AUCTION, at the MART, on THURSDAY, SEPTEMBER 6, at TWELVE, FIVE UNFINISHED FREEHOLD HOUSES, desirably situate, facing the high road at Maryland Point, Stratford, Essex, capable of being completed at a small outlay, and moderately estimated, when finished, to produce a rental of 150l. per annum. The buildings are of a remarkably substantial character, and the ground possesses a frontage of 70 feet by a depth of 207 feet; 700l. may remain on mortgage for two years at 5 per cent. affording an admirable opportunity to a builder of small capital by completing the houses of becoming the freeholder of a valuable and remunerative property, without the necessity of a large outlay in the first instance.—May be viewed, and particulars obtained at the Angel Inn, Stratford; at the Mart; of D. HUGHES, Esq. Solicitor, 13, Gresham-street; and of Mr. DEBENHAM, Auctioneer, Land Surveyor, and Estate Agent, 89, Cheapside.

BUILDING MATERIALS, WINDSOR HOME-PARK.—By order of her Majesty's Commissioners of Works and Public Buildings.

MESSRS. CLEAVE and UNDERHAY (successors to the late Mr. Tebbott) are honoured with instructions to SELL by AUCTION, upon the PREMISES, near Frogmore House, Windsor-park, on THURSDAY, SEPTEMBER 6th, 1855, at TWELVE o'clock, about 100,000 of Saint's BRICKS, part stacked and part in boundary park wall, from the Rotten Row Gate to Windsor, about 50 yards; plate and iron bars and slates, a quantity of Dutch clinkers, several wrought-iron floodgates and frames, fir and oak quartering of various scantlings, rafters, doors, &c. &c. The whole is in good condition and close to the river Thames.—To be viewed the day before and morning of sale; and catalogues had, at the Auctioneers' Offices, Windsor; and 9, Upper Baker-street, Regent's-park, London; or forwarded by post, on application.

WESTBOURNE TERRACE NORTH.—To BUILDERS and OTHERS.—Seven unfinished Houses.

MESSRS. LOCKWOOD are directed by the Mortgagees to SELL by AUCTION at the STAFFORD ARMS, HARROW ROAD, on WEDNESDAY, SEPTEMBER 12, at TWO, SEVEN UNFINISHED HOUSES, situate and being Nos. 18, 20, 22, and 24, Westbourne-terrace North, and Nos. 4, 5, and 6, Cornwall-terrace, Chichester-road, Bayswater, all brick-built and substantially erected in a position most eligible, in close proximity to Westbourne-terrace, and the fashionable locality surrounding. The larger houses are estimated to realise 80l. and those each, and the three 55l. per annum. They are 1 in 3 living rms, at low ground rents. May be viewed and printed particulars obtained fourteen days before the sale, of Messrs. CRIPPS and COLLINS, Solicitors, 11, Bloomsbury-street, Cavendish-square; and at the Offices of the Auctioneers, No. 1, Barnard-place, Bryanston-square, and No. 44, Upper Baker-street. Part of the purchase-money may remain if required.

FREEHOLD BUILDING LAND, STRATFORD, ESSEX.

MR. JOHN COLLINGS will SELL by AUCTION, at the CASTLE TAVERN, near the property, on MONDAY, SEPTEMBER 10, at FIVE o'clock, FORTY FOUR PLOTS of VALUABLE BUILDING LAND, situate in Claudes-road, Church Estate, Angel-lane, Stratford. Particulars and conditions of sale may be had of H. D. Daukes, Esq. 45, Vincent-square, Westminster; King's Head Inn, West Ham; at the Castle Inn; of Mr. SHOWELL, Builder, Angel-lane, Stratford; and of Mr. JOHN COLLINGS, Estate Agent, Wordsworth place, Kingston, Surrey

TO CARPENTERS, BUILDERS, PIANOFORTE AND CABINET MAKERS, AND OTHERS

MR. LEREW will SELL by AUCTION, on the PREMISES, No. 42, Union-street, Somers-town, on WEDNESDAY, SEPTEMBER 12th, at ELEVEN for TWELVE, about 2 very clean, white, pine and spruce PLANKS, DEALS, and BATTENS, 60 squares of prepared flooring, lap weather boards, mahogany hinges and planks, a perfect of seasoned, cedar pole, painting, ladders, harness, 1,000 pieces of paperhangings, dry out stuff, and miscellaneous useful items.—May be viewed the day prior, and catalogues had.

Auction Offices, 2, Cardington-street, Hampstead-road.

IN BANKRUPTCY.—SAINT LUKE'S.

MR. LEREW will SELL by AUCTION, on the PREMISES, No. 198, Upper Whitecross-street, on THURSDAY, SEPTEMBER 6, at ELEVEN for TWELVE, by order of the Assignees of Messrs. SAMUEL and ELIZA Hayes, Builders, the genuine STOCK-IN-TRADE, comprising mahogany, dry, and other stuff, quantity of soft deals, fifteen window frames, glazed, fourteen doors, two stoves, copper and other boilers, two pumps, lead and iron pipes, about 1,000 old bricks, two brick-carts, chaff engine, 2½ pairs of cart wheels, about twenty loads of old oak and fir timber, cart and other harness, and numerous other appertaining to the trade.—May be viewed the day prior and morning of sale; and catalogues had on the Premises; of A. DIGBY, Esq. Solicitor, 31, Chancery-lane, Finsbury; of Mr. WHITMORE, Estate Office, Lisson-grove, 2, Basinghall-street, City; and of the Auctioneer, 2, Cardington-street, Hampstead-road.

HAMMERSMITH.—Valuable Contractors' Plant, New Bricks, and Farming Stock, belonging to the estate of the late William Hoof, Esq.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, on the PREMISES, Brickfield Farm, Wood-lane, Shepherd's-bush, on TUESDAY, 11th, of SEPTEMBER, at TEN for ELEVEN, on account of the number of lots the sale of which will occupy the day, the useful young cart-horses, and sets of harness, three strong built lumber carts, stable and timber waggons, oil and water cans, iron tanks, mains, &c. a capital van, railway ballast trucks, sets of iron ladders, double-pitched timber, chaff engine, hoisting jacks, double-action pumps, well-boring tackle, blocks and falls, lengths of iron gas and water pipes, iron wheelbarrows, carpenters' benches, useful materials and working plant, new bricks, tiles, slates, &c. Also the FARMING STOCK, comprising cows and pigs, a steam plough, with engine and boiler, farming implements, meadow hay, straw, and other effects.—May be viewed one day previous, and catalogues had at the Offices of Messrs. Reed and James, Solicitors, 13, Bell-yard, Carey-street, Lincoln's-inn; of Messrs. FOSTER and SON, 54, Pall-mall; on the Premises; and of the Auctioneers, 3, Parliament-street, Westminster, or Coal Exchange.

SALES BY AUCTION.

HIGHGATE.—Capital Stock Bricks, Place, and Grissels.

MESSRS. PRICKETT and SON will SELL by AUCTION, at the BRICKFIELDS, on the west side of the Archway-road, on MONDAY, 3rd SEPTEMBER, at ONE o'clock, under a distraint for rent, about 314,000 capital STOCK BRICKS, 5,000 Stocks, Place, and Grissels, and 26,000 Rough Stocks.—May be viewed, and catalogues obtained at the Inns in the neighbourhood; and of Messrs. PRICKETT and SON, Auctioneers, 34, Southampton buildings, Chancery-lane, and Highgate.

FREEHOLD LAND, eligible for building, on Copthorne-common, now called Effingham park, in the county of Surrey, near the Effingham station, East Grinstead Railway.

MESSRS. FOSTER and SON will SELL by AUCTION, at the MART, on TUESDAY, SEPTEMBER 18th, at TWELVE, a PLOT of FREEHOLD LAND of eight acres, having roads on three sides, in the parish of Burstow, free of tithe and land-tax, on a gravelly soil, high and dry, within five prospects.—Particulars may be had, fourteen days before the sale, at the Fox Inn, Worth; at the Mart; of Messrs. S. F. MILLER and SON, Solicitors, Sussex-chambers, 10, Duke-street, St. James's; and of Messrs. FOSTER and SON, 54, Pall-mall.

FREEHOLD LAND.—To BUILDERS or Parties wishing to build Suburban Residences.—FREEHOLD LAND TO BE SOLD, in some of the most eligible building estates in the neighbourhood of London, viz.:—
FOREST-HILL, Croydon Railway.
ST. MARGARET'S, near Richmond, South Western Railway.
OAKLANDS GRANGE, Weybridge, Surrey, ditto.
HOUNSLOW, Middlesex, ditto.
TOTTENHAM-GREEN, Eastern Counties Railway.
TUNNEL, South Western Railway.
RECTORY ESTATE, EALING, Great Western Railway.
The WADDINGTON ESTATE, ENFIELD, Eastern Counties Railway.
WOOD-GREEN, Green-lanes, Hornsea, Great Northern Railway.
OLD FORD, Stratford, Eastern Counties Railway.
Part of the purchase-money may remain at 5 per cent. interest. Parties assisted in the building of their own residences. Several Plots to be Let on Building Lease. Money advanced to respectable parties.—Apply to Mr. GEORGE MORGAN, 5, Chancery-lane.

BUILDING GROUND, with liberal CASH ADVANCES.—TO LET, at Old Ford, for the erection of Fourth-rate Houses, which are much required in this rapidly improving neighbourhood, and which let and sell rapidly. Cash liberally advanced as the buildings proceed. Term, 160 years. Ground-rent low. For further particulars, apply to Mr. GEORGE CLARKSON, Surveyor, 48, Penton-street, Pentonville.

MAITLAND-PARK, HAVERSTOCK-HILL, Hamp-tead-road.—LAND-TAX REDEEMED TO BE LET, upon Building Leases for ninety-nine years, from Christmas 1852, desirable BUILDING SITES upon the above Estate. The central situation for houses in this locality, and the picturesque position of the property adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders generally, and for investors themselves.—For terms and to view plans, apply to the Secretary of the Orphan Working School, 33, Ludgate-hill; Messrs. TERRELL and CHAMBERLAIN, 59, Lincoln's-inn-fields; the Architects, Messrs. WEHNERT and ASHDOWN, 43, Charing-cross; or at the Porter's Lodge, on the Premises.

DOVER.—VICTORIA PARK.—FOR SALE, this valuable PLOT of FREEHOLD LAND, containing nearly seven acres, most delightfully situate on a gentle slope in the south west side of the castle, and admirably adapted for the erection of first-class semi-detached and detached villas. The early completion of a direct line of railway from the metropolis, which may now be safely relied upon, will restore to Dover its important advantages, and thus enable a successful issue to any judicious building enterprise.—Apply to Mr. JAMES WORSFOLD, Estate Agent, Dover.

ST. MICHAEL, CORNHILL.—TO LET, upon building leases, for a term of sixty-one years, the SITES of the NORTHERN PORTION of the GEORGE and VULTURE TAVERN, and Nos. 6, 7, 8, and 9, on the south side of St. Michael's-alley, Cornhill.—The Churchwardens and Committee of Overseers will meet in the Vestry-room, in St. Michael's Church, Cornhill, on THURSDAY, the 20th SEPTEMBER, at TWELVE o'clock precisely, to receive TENDERS from parties desirous of taking the above sites, which are divided into two lots. The terms and conditions may be seen, or printed copies of the same obtained on payment of 1s. upon application to Mr. W. A. MASON, Architect and Surveyor, Great St. Helen's; or to Mr. HENRY HOPPE, Vestry Clerk, Sun-court, Cornhill. Parties tendering must send in Tenders to the Vestry Clerk on or before the 19th SEPTEMBER, under cover addressed to the churchwardens, and indorsed "Tender for Ground in St. Michael's-alley," and must be personally in attendance at ELEVEN o'clock on the 20th SEPTEMBER. The churchwardens and overseers do not bind themselves to accept the highest or any other Tender. Should any Tender be accepted, the party Tendering will be required thereupon to sign a memorandum, a form of which may be previously inspected upon application to the Vestry-clerk

FREEHOLD BUILDING LAND, with excellent Brick Earth, Islington.—TO BE SOLD or LET, in large or small lots, about TWENTY TWO ACRES of LAND, between the Upper Holloway and Hornsey Roads, within two and a half miles from the Angel, in a most eligible situation.—Apply to Mr PEACHY, 17, Salisbury square, Fleet street.

ON BUILDING LEASE.—TO BE LET, an eligible PLOT of GROUND, having Two Frontages, making together about 468 feet in length, with a considerable quantity of old materials on the ground.—Apply to W. C. READ, Architect, 4, Old Broad-street, where a plan may be seen and an order to view.

THE CAMP, ALDERSHOTT.—TO BUILDERS, BREWERS, and OTHERS.—FREEHOLD LAND TO BE LET, on building lease, with immediate possession, suitable for the erection of shops and a high-class tavern. It is a corner plot, possessing numerous advantages, fronts the turnpike-road to Farnham, and is in front of the Aldershott Camp, the permanent barracks, and two miles from the town of Farnham.—Further particulars may be obtained on application to Mr HAGGETTER, Westend Farm, Aldershott; and Mr. T. GOODCHILD, Architect and Surveyor, Guildford; and offers for same will be received by Mr. GOODCHILD up to SIX o'clock, SEPTEMBER 15th, 1855.

HAVERSTOCK-HILL.—To BUILDERS. TO BE LET, in the MALDEN and QUEEN'S ROAD (both main roads), some eligible FRONTAGES for Shops and Private Houses. All the sewers are in the estate, roads all formed, and now making. Term, ninety-nine years. Low ground-rents. Bricks supplied at a low price, and liberal cash advances. Apply to Mr. JOHN MOORE, 80, Chalk-st reet, Euston-square.

ABOUT ONE ACRE and a HALF of LAND TO LET, on the Eastern side of Devereil street, New Kent-road, adapted for contractors, timber merchants, dealers in building materials, or any business requiring space. For particulars apply to Mr. DAVIES, 9, Portland-place, New Kent-road.

FOREST-HILL.—BUILDING LAND TO BE LET, commanding most extensive views, beautifully picturesque, very eligibly and advantageously situate, three or four minutes' walk from the railway station. Further particulars of Mr. WM. RIDDLES, 54, Little Britain, City, between the hours of Twelve and Three.

FREE RAILWAY TICKETS.—ENFIELD ESTATE.—IMPORTANT to BUILDERS.—The head of every house built upon the Waddinton Estate, of the value of 50l. per annum, will be entitled to a Free First-class Railway Ticket; the head of every house of the value of 35l. per annum, will be entitled to a Free Second-class Railway Ticket, for fourteen years.—Apply to Mr. GEORGE MORGAN, 5, Chancery-lane.

WANTED, at Islington, Highbury, or Canonbury, to PURCHASE a small genteel RESIDENCE, either Freehold or Leasehold, semi-detached preferred.—Address, R B No 1, Edward-street, St Peter's-road, Mile-end.

EXTENSIVE BUSINESS PREMISES, situate at No. 3, Union-street, East Spitalfields, consisting of a house, with lofty and commanding shop, warehouse in the rear, with separate entrance in Crispin-street, TO BE LET, on a Repairing Lease for Twenty-one Years, by PUBLIC TENDER, by the parish of St. Mildred, Bread-street, London. Sealed Tenders to be sent, marked "Tender for Lease of House No. 3, Union-street East," to Mr. STEINBERG, Vestry Clerk, 32, Broad-street, Cheapside, on or before FRIDAY, the 21st of SEPTEMBER, 1855. May be viewed on application at the Premises; and particulars of terms obtained, and specification of repairs inspected, at Mr. STEINBERG'S Office; and at Mr. HAWTREYS, No. 97, Cannon-street West.

WORKSHOPS or PREMISES.—TO BE LET, in the neighbourhood of Oxford-terrace, Edgware-road, TWO spacious WORKSHOPS, in thorough repair, suitable for any business, and possessing every capability. They are each 42 feet long, 21 feet wide, and respectively 16 feet and 16 feet in height. They have a range of lofty windows along the side, and the upper one has five large skylights. There are two fire places and ventilating shafts. The floors are wood, and under the lower one is a space for storage.—For further particulars and terms, apply to Mr GREEN, House-agent, Upper Southwick-street, in the immediate neighbourhood; or at 38, Bloomsbury-square.

TO BE SOLD, TWO substantially-built semi-detached VILLAS, situate near the Uxbridge railway station, on the Great Western Railway, about fifteen miles from London. They are in a forward state of completion each containing five large and lofty bed-rooms, two large sitting-rooms, two good kitchens and cellar, pantry, &c. well suited for respectable families, having a full south aspect, and standing on a high gravelly soil. The above property is leasehold, subject to a ground rent of 3l. 13s. 6d. each per annum.—For particulars, apply to T. HARDY and SON, Builders, Cowley, Middlesex.

TO BE DISPOSED OF, by PRIVATE CONTRACT, the GOODWILL, PLANT, and POSSESSION of ASHFORD MARBLE WORKS, DERBYSHIRE, with the STOCK-IN-TRADE thereon. These old established works are situate in the very centre of the marble district of Derbyshire, and combine the advantages of the cheapness of labour, in a country village, with an excellent business connection, comprising some of the first architects and builders in the large provincial towns. There are two excellent Black Marble Quarries close to the works, a Rosewood Marble Quarry within one mile, and quarries of the celebrated Fossil Marble within three miles. The river Wye runs close by the works, affording an ample supply of water for use in the manufactory, and a motive power for the machinery, unattended with the expense of steam. The works themselves consist of a manufactory about one acre in extent, with sawing and polishing mills, fitted with machinery, worked by two unrivalled water-wheels, workshops, show-room, counting-house, and apartments. There is a dwelling-house, with a garden and orchard adjoining the works, and about nine acres of land are also held therewith. The premises are about two miles from Bakewell, five miles from Rowsley Railway station, thirteen miles from Chesterfield, seventeen miles from Sheffield, nine miles from Buxton, and thirty-four miles from Manchester. From Rowsley Station is every facility for railway communication to all parts of the kingdom, except in the direction of Manchester; and when the railways are completed for connecting Derby with Stockport, direct railway communication with Manchester and the North west will be brought within ten miles of the works. It is rarely that such an eligible opportunity for business is presented to persons having the command of 1,500l. or 2,000l.—Further particulars may be known, on application prior to the 22nd day of SEPTEMBER next, at the Office of JOHN TAYLOR, Solicitor, Bakewell.

Aug. 25, 1855.

TO BUILDERS, CARPENTERS, AND OTHERS.

TO BE SOLD, the GOODWILL of an old-established BUILDER'S BUSINESS, employing on an average thirty men, in a good situation in the county of Hertford. There is also a small Builder's Plant and Stock, which will be taken at a valuation, or would be sold by auction on the premises, if declined by the person taking the business. The premises comprise convenient dwelling-house, with good garden, &c. yard and workshops, sheds, &c. four-stall stable and cart-house, &c. Rent, 30l. per annum, on lease, the present owner being the freeholder.—For further particulars and terms, apply to Mr. W. R. GLASIER, Auctioneer, &c. 41, Charing-cross.

TO PLUMBERS, PAINTERS, GLASS CUTTERS, &c.

TO BE DISPOSED OF, an established BUSINESS, in a first-rate situation, at all times commanding a good trade; Domestic affliction the cause of leaving. Coming in early particulars of the Tyne Glass Company, Bridewell-wharf, William-street, Blackfriars, London.

TO PLUMBERS, PAINTERS, GAS FITTERS, and OTHERS.—A BUSINESS to be DISPOSED OF, in the City of London, and may be had with lease of Premises for 50l.—Apply by letter to C. C. C. 18, Budge-row, City.

TO SMITHS, IRONMONGERS, FARRIERS, &c.—TO BE LET, with immediate possession, an old-established BUSINESS in the above trade, of forty years' standing, four miles west of London. Satisfactory reasons for leaving. For particulars, enquire on the Premises to Mr. GEO. CANE, opposite the Coopers' Arms, Putney, Surrey.

TO CARPENTERS and JOINERS, PIANOFORTE and CABINET MANUFACTURERS, PRINTERS, or any Persons requiring Business Premises.—TO LET, on lease, for seven, fourteen, or twenty-one years, a PEN-ROOFED HOUSE, with three workshops in the rear, situated 9, Rupert-street, Coventry-street.—Inquire of Mr. GRETTAN, 91, Hemingford-terrace, West Islington. Rent moderate.

TO ESTATE OWNERS AND ALLOTTEES.

MR. JAMES WYLSON, ARCHITECT and SURVEYOR, 31, Church Row, Beauvoir Square, Kingsland (Con-sulting Surveyor to the National Freehold Land Society), ADVISES as to LAND and BUILDING SPECULATIONS.—A VACANCY for an OUT-DOOR ARTICLED PUPIL.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either high boxes or carriages.—Portland, Caen, Bath, and Yorkshire Block Stone always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c. N.B. This wharf is very near the St. Margaret's estate.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX, Brook, & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 14, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, September 1, 1855.

CRYSTAL PALACE.—The FOUNTAINS INSIDE the BUILDING are now playing DAILY.
By order,
C. GROVE, Secretary.
September 3rd, 1855.

BUILDERS' BENEVOLENT INSTITUTION.—The EIGHTH ANNIVERSARY DINNER will be held at the LONDON TAVERN, Bishopsgate-street, on TUESDAY, the 30th of OCTOBER next.
CHARLES LUCAS, Esq., President, in the chair.
Gentlemen desirous of promoting the interests of the institution by becoming stewards, will please to forward their names to the Treasurer, Mr. GEORGE BIRD, 38, Edgware-road, or to the Secretary, at the Office, 19, Southampton-street, Bloomsbury.
A. G. HARRIS, Secretary.

BUILDERS' BENEVOLENT INSTITUTION.—An ELECTION of PENSIONERS will take place in NOVEMBER next. Candidates may obtain forms of application (to be returned on or before 24th SEPTEMBER) at the Offices of the Institution, 19, Southampton-street, Bloomsbury.—Pensions, £24 per annum for males, and £20 for females.
August 30th, 1855. A. G. HARRIS, Secretary.

COMPETITIONS.

TO ARCHITECTS AND OTHERS.

THE GUARDIANS of the WHITECHAPEL UNION are desirous of receiving PROPOSALS from Architects as to the terms upon which they would supply PLANS for the ERECTION of a new WORKHOUSE, with necessary offices, upon the site of the present establishment in Christchurch, Mile-end, New-town, to contain 1,200 adult poor persons, male and female, but which works may be only partially carried out at present. The foundations will meet at the Board-room in the Workhouse, in Whitechapel-road, on TUESDAY, the 18th SEPTEMBER instant, at SIX o'clock in the Evening, to receive answers to the above. Further particulars may be obtained and a plan of the ground seen at the Office of the Clerk, No. 46, Leman-street, Goodman's-fields.
By order,
W. J. RUDGE, Clerk to the Guardians.
September, 1855.

CONTRACTS.

WICKLOW HARBOUR.—NOTICE to CONTRACTORS.—The Commissioners for Improving the Harbour of Wicklow are prepared to receive TENDERS from competent parties for the EXECUTION of the undermentioned WORKS, viz.—CONSTRUCTING a PIER and BREAKWATER of TIMBER PILING and MASONRY, DREDGING out the BAR and CHANNEL to a depth of EIGHT FEET at low water, and to REPAIR the existing QUAY WALLS. The Contractors to set forth in their Tenders the period within which the works are to be executed and the terms of complete measuring Plans and specifications prepared by HENRY BRETT, Esq. C.E. and which may be seen at the Office of the Secretary to the Harbour Commissioners, Wicklow; or by application to Mr. BRETT, Engineer, 4, Harrington-street, Dublin. The Tenders to be sent in, sealed and addressed to the Chairman of the Harbour Commissioners, on or before TWELVE o'clock, on MONDAY, the 17th of SEPTEMBER 1855.—By order,
ROBERT HALPIN, Secretary to Harbour Commissioners.
Harbour Office, Wicklow, August 16, 1855.

BOROUGH of BIRMINGHAM. — To SURVEYORS and VALUERS. — The Assessment, Rate, and Appeal Committee of the Council, is desirous of CONTRACTING to make a NEW VALUATION of all the RATEABLE PROPERTY within the Borough. Surveyors desirous to Tender may inspect the specification and obtain all necessary information on application at my Office, in and after the 3rd day of SEPTEMBER next sealed Tenders, mark'd "Tender for New Valuation," to be delivered to me on or before the 15th day of SEPTEMBER next.—The Committee does not bind itself to accept the lowest or any Tender.
By order, THOMAS STANBRIDGE, Town Clerk.
Temple-street, Birmingham, August 28, 1855.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Commanding Royal Engineer's Office, Dublin, 28th August, 1855.—The principal Officers of Her Majesty's Ordnance hereby give Notice, that they will receive PROPOSALS for the following CONTRACT, viz.:—For the CONSTRUCTION and ERECTION of PROPOSED BUILDING, to contain Steam Washing and Drying Apparatus, with Hot Air Machinery and Engineer, at the temporary barracks on the Curragh of Kildare, in the Dublin district. Persons desirous of Tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, Lower Ostman-yard, Dublin, and may obtain specifications, with the terms of contract, upon making a deposit of 1l. for the same, which deposit will be repaid when the specifications are returned unsoiled. The whole of the work to be completed within one hundred days after the acceptance of the Tender.—The letter of Tender to be sealed, and transmitted, under cover, to "The Director-General of Contracts, Ordnance Office, Pall-mall, London," so as to be received on or before the 10th day of SEPTEMBER, 1855, and to be marked on the outside, "Tender for Work at the Curragh of Kildare."

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London district hereby gives Notice, that sealed TENDERS, addressed to the Director-General of Contracts, will be received at the Office of Ordnance, Pall-mall, on or before the 10th SEPTEMBER, 1855, for RAISING the BUILDINGS (except the Riding-school) a story, west bun nary, at Regent's park barracks. The specification and plans for the above service may be seen, and forms of Tender obtained, at the Royal Engineer's Office, 11, James street, Buckingham-gate, between the hours of ELEVEN and THREE o'clock, from the 3rd to the 12th of SEPTEMBER, 1855, inclusive. The Ordnance Department reserves to itself the right of rejecting the whole or any of the Tenders.
Royal Engineer's Office, London District, 31st of August, 1855.

NOTICE to BUILDERS.—The Commanding Royal Engineer in the London District, hereby gives Notice, that sealed Tenders, addressed to the Director General of Contracts, will be received at the Office of Ordnance, Pall-mall, on or before the 12th SEPTEMBER, 1855, for SLEEPERING, LAYING DOWN, and FIXING the necessary GAS PIPES and FITTINGS to the several BUILDINGS at the TOWER of LONDON. The specifications and plans for the above service may be seen, and forms of Tender obtained, at the Royal Engineer's Office, Tower, between the hours of ELEVEN and THREE o'clock from the 3rd to 10th SEPTEMBER, 1855. The Ordnance Department reserves to itself the right of rejecting the whole or any of the Tenders.
Royal Engineer's Office, London District, 31st August, 1855.

Royal Engineer's Office, Portsmouth, August 28, 1855.

TO BUILDERS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 24th of SEPTEMBER, 1855, from such persons as may be willing to enter into a contract with the Ordnance for the ERECTION of 2 WOOD WATER TANKS, with supply pipes, pumps, &c. at Albany Barracks, Isle of Wight, agreeably to the plans and specification to be seen by applying at the Royal Engineer's Office, Portsmouth, every day (Sundays excepted), until the 22nd day of SEPTEMBER, 1855, and where also forms of Tender may be obtained.
N.B. The Ordnance reserve to themselves the right of rejecting all or any of the Tenders.

Royal Engineers' Office, Portsmouth, 28th August, 1855.

TO BUILDERS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 24th day of SEPTEMBER, 1855, from such persons as may be willing to enter into a contract with the Ordnance for the ERECTION of proposed OFFICERS' QUARTERS, MESS ESTABLISHMENT, and SOLDIERS' PRIVIES, at Winchester Barracks, county of Hants, agreeably to the plans and specification to be seen by applying at the Royal Engineers' Office, Portsmouth, every day (Sundays excepted), until the 22nd SEPTEMBER, 1855, and where also forms of Tender may be obtained.
N.B. The Ordnance reserve to themselves the right of rejecting all or any of the Tenders.

THE ENFIELD LOCAL BOARD of HEALTH are prepared to receive TENDERS from persons willing to contract for MAKING, LAYING, or FIXING the HOUSE CONNECTIONS and SERVICES, WATER CLOSETS, &c. &c. for Drainage and Water-supply in the district of Enfield, including all materials and apparatus required, as well as labour, being Contract No. 9. Further particulars may be obtained by application at the Office of J. PILBROW, Esq. C.E. Tottenham, engineer to the said Boards, and where printed specifications and conditions of contract may be had upon payment of 2s. each. Tenders must be sent in on or before THURSDAY, the 20th day of SEPTEMBER instant, endorsed "Tender for House Services," and addressed to the Local Board of Health, Enfield, Middlesex.
By order of the Board,
JOHN SAWYER, Clerk.
Enfield, September 4th, 1855.

HARROW LOCAL BOARD of HEALTH.
To CONTRACTORS for GRAVEL, &c.—The Board hereby give Notice, that they are prepared to receive TENDERS from parties willing to contract for the supply and delivery of 450 yards of well sifted DAWLEY STONES (for roads); 120 yards of well sifted small DAWLEY STONES (for footpaths); 150 yards of well sifted HARROW WEALD STONES (for roads); 50 yards of well sifted small HARROW WEALD STONES (for footpaths). Both materials to be delivered at such places in the district of the said Board, in such quantities, at such time, and in such manner as the said Board, or their Surveyor, shall from time to time prefer. The Board will not object to receive separate Tenders for either the Dawley or Harrow Weald Stones, and do not bind themselves to accept the lowest or any Tender. Tenders endorsed "Tender for Gravel," to be sent in to me at or before ONE o'clock, p.m. on THURSDAY, the 13th instant.
By order of the Board
Harrow, September 1, 1855. WM. WINKLEY, Jun. Clerk.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS. The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 3, Greek-street, Soho-square, on TUESDAY, the 11th day of SEPTEMBER next, at ONE o'clock p.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING, certain intercepting BRICK and PIPE SEWERS, 9,457 feet in length, or thereabouts, with other works connected therewith, at and near Lambeth, Batchbath, and other places in the county of Kent, and for the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained at the principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 17th day of SEPTEMBER inclusive. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted, will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.
E. H. WOOLRYCH, Secretary.
No. 1, Greek-street, Soho-square.
Dated this 6th day of September, 1855.

METROPOLITAN COMMISSION of SEWERS To BUILDERS, CONTRACTORS, and OTHERS The Metropolitan Commissioners of Sewers hereby give Notice that they will be ready at the Court-house, No. 3, Greek-street, Soho-square, on TUESDAY, the 18th day of SEPTEMBER instant, at ONE o'clock precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING, certain intercepting BRICK and PIPE SEWERS, 9,457 feet in length, or thereabouts, with other works connected therewith, at and near Lambeth, Batchbath, and other places in the county of Kent, and for the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained, at the principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 17th day of SEPTEMBER inclusive. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted, will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.
E. H. WOOLRYCH, Secretary.
No. 1, Greek-street, Soho-square.
Dated this 6th day of September, 1855.

ATHERTON GENERAL CEMETERY.—To BUILDERS.—Notice is here given, that the Burial Board of the township of Atherton, in the county of Lancaster, intend CONTRACTING for the ERECTION and COMPLETION of TWO CHAPELS, LODGE, ENTRANCE GATES, and other WORKS, and that persons willing to Contract may inspect the plans and specification at the Offices of the Architect, Mr. THOMAS B. BARRY, 47, Bedford-street North, Liverpool, from the 10th to the 24th SEPTEMBER. Sureties will be required for the due performance of the contract. The Tenders to be forwarded, sealed, to the undersigned, on or before the 25th of SEPTEMBER, by TWELVE o'clock at noon. The Board will not pledge itself to accept the lowest or any Tender.
G. MARSLAND, Clerk to the Board.
Bolton-le-Moors, August 30th, 1855.

TO BUILDERS

PERSONS willing to CONTRACT with the Heap Burial Board for the ERECTION and COMPLETION of TWO CHAPELS, ENTRANCE LODGE, GATES, and other works, may inspect the plans and specification at the Offices of the Architect, Mr. THOMAS B. BARRY, 47, Bedford-street North, Liverpool, from the 10th to the 24th SEPTEMBER inclusive; where also bills of quantities may be had on application. Parties whose Tenders are accepted will be required to enter into a bond with two sureties for the due performance of the contract. The Board will not pledge itself to accept the lowest or any Tender. The Tenders must be delivered, sealed, to the undersigned, on or before TUESDAY, the 25th inst., by TWELVE o'clock at noon.
THOMAS WOLSTENHOLME, Clerk to the Board.
Heywood, Aug. 29, 1855.

BRAINTREE CEMETERY.—To Builders and Others.—The Burial Board for the Parish of Braintree, in the county of Essex, are desirous of receiving TENDERS for BUILDING, ERECTING, and COMPLETING TWO CHAPELS, ENTRANCE LODGE, and GATES, at their new burial-ground. The plans, specifications, and contract may be seen at my Office, and at the Offices of the Architect, JOHN JOHNSON, Esq., Whitney-street, Bury St. Edmunds, of whom further particulars and bills of quantities (price of 1s.) may be obtained. Sealed Tenders addressed to me, and indorsed "Tender for Cemetery Works," to be sent in on or before TWELVE o'clock at noon, on MONDAY, the 24th day of SEPTEMBER next. The Board will require approved security for the due performance of the contract, but do not pledge themselves to accept the lowest or any Tender.
A. CUNNINGTON, Clerk to the Board.
Braintree, August 28, 1855.

EXETER WATER COMPANY. — The Directors of the Exeter Water Company are prepared to receive TENDERS from parties who may be willing to undertake the following CONTRACT.—To make and erect STEAM-ENGINES, PUMPS, and APPARATUS at Pynes, near Exeter. The drawings may be examined, copies of the specification and form of Tender procured, at the Company's Office, No. 4, Bedford-circus, Exeter, on and after the 24th instant. The Company do not bind themselves to accept the lowest, or any Tender. The Tenders to be delivered on or before FRIDAY, the 14th day of SEPTEMBER next.
By order,
WM. TOMPSON, Clerk to the Company.
4, Bedford-circus, 23rd August, 1855.

[*For remainder of Contracts see next page.*

CONTRACTS.

TO BUILDERS

THE GUARDIANS of the POOR of the STRAND UNION are desirous of receiving TENDERS from parties who may be willing to CONTRACT for certain WORKS to be done at the Infirmary of their Infant poor Establishment, Millfield House, Tanner's-end, Edmonton.—Specification may be inspected at the Infant House, or at the Union Office, 6, Bow-street. Sealed Tenders to be delivered at No. 6, Bow street, at or before HALF-PAST SEVEN o'clock in the evening precisely, on TUESDAY, the 18th day of SEPTEMBER next, when the parties tendering, or their agents, are requested to be in attendance. The Guardians do not pledge themselves to accept the lowest or any Tender. By order,

JAMES KILNER, Clerk.

August 29, 1855.

HORNSEY DRAINAGE.—To BRICKLAYERS and GENERAL CONTRACTORS.—The Highway Board of the Parish of Hornsey hereby give Notice, that they are prepared to receive TENDERS for EXCAVATING and LAYING SEWERS and DRAIN PIPES as also the Construction and completion of other works connected therewith at the Maynard-street District, in that parish. The drawings and specification may be examined, and after THURSDAY the 13th inst. and form of Tender, with schedule and bill of quantities (to per copy), may be obtained at the Offices of the Board, No. 1, Tenders to be delivered before FOUR o'clock on MONDAY, the 17th SEPTEMBER, endorsed, "Tender for Drainage Works," addressed as under, to Mr R MALCOLM RAMSAY, Surveyor to the Board. The lowest or any Tender not necessarily accepted. By order,

TOLEMIN SMITH, Chairman.
W. POTTER, Clerk.

Offices of the Hornsey Highway Board,
17, High-street, Highgate.

TO TAR DISTILLERS and OTHERS.—The Directors of the Chartered Gas Company are desirous of receiving TENDERS for the PURCHASE of TAR to be taken from their several stations, viz. Horseferry-road, Westminster; from their Brick lane, Old-street; and Curtain-road, Shoreditch, during a period of twelve months. Quantity, about One Million Gallons, at per gallon. Payments to be made monthly, in cash.—Parties desirous to be treated with are requested to send in on or before SATURDAY, the 15th instant a list of their names and addresses to the Secretary, Horseferry-road, Westminster, and indorsed "Tender for Tar."

3rd September, 1855

ETON UNION, BUCKS.—To BUILDERS.—Notice is hereby given, that the Guardians of the said Union will at their Meeting, to be held at the CENTRAL WORKHOUSE at STOKE on TUESDAY, the 11th day of SEPTEMBER next at ELEVEN o'clock in the Forenoon, receive TENDERS to perform certain BUILDING and DRAINAGE WORKS, according to plans and specification to be seen on application to the Master of the Workhouse of the said Union at Slough. The Guardians will not pledge themselves to accept the lowest or any Tender. By order of the Board of Guardians,

C. P. BARRETT, Clerk

Eton, August 23rd, 1855.

TO CAPITALISTS, HYDRAULIC ENGINEERS, and Others.—The PATENT RIGHT of an APPARATUS for RAISING LIQUIDS to be DISPOSED OF, on most moderate terms. By the use of the apparatus, the refuse water, which has been used for baths or other purposes, is made to raise the same quantity from the basement of a building, to whatever elevation the waste water may be discharged from it; it may be also applied to many other purposes, such as raising gas, &c. as no pumping would be required; it would be found in point of steadiness and cleanliness greatly superior to the beer-engine. An early application is necessary.—Address, T. L. Mrs. Lima, 16, Grafton-street, Soho.

CHUBB'S LOCKS & FIREPROOF SAFES.

INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH WESTERN RAILWAY, LIVERPOOL.

"London and North-Western Railway Company,
"Liverpool, May 17, 1853

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs Chubb and Son."
FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

8, Great Vine street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, as I shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, T. OTWAY.

"Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests, Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock

Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 18, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; and Horsley fields, Wolverhampton.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Iron, Grey, Brass Fitting, Nail, Spike, Nail (cut), Copper, and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr Arn its Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope street, three-quarter, London.

No. 1051, Class 3, Sec. 2, in the BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

IRONMONGERY.

PFEIL AND STEDALL.

THE LARGEST STOCK AT

THE LOWEST PRICE,

5 AND 6, BROAD-STREET, BLOOMSBURY.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior safe fastenings, of moderate prices. Beth's Pisan and ornamental cast and wrought iron work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

MORTISING MACHINE.
127 to 132

KIMBERLEY'S PATENT MORTISING MACHINE.

The Patentee feels justified in calling attention of all Builders, Cabinet-makers, and others to this simple, strong, cheap, and most effective machine. Hundreds are in daily use all over the kingdom, and references to any extent can be given to prove it really is what it is represented, viz. the most valuable tool ever offered to the trade.

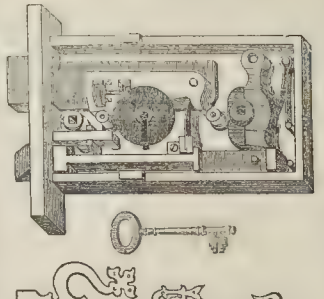
Amongst testimonials of the highest character, he would respectfully invite attention to the following:—

"Rugby, June 14, 1855

"Dear Sir, In reply to your inquiry respecting the Patent Mortising Machine I purchased from you THREE YEARS AGO, I have to inform you I consider it a most simple, EFFICIENT and DURABLE ARTICLE; nor do I think it saying more than it deserves when I give it as highly approved every way to one I was recently induced to purchase from a London house, which, although represented to be unexcelled in its principal and most essential movement and all others, I assert that in my shop is of GREAT VALUE, as it must, indeed, be to every builder who possesses it.

"I am, Sir, yours faithfully,

"JOHN PARNELL"



Local Agents: Messrs. PUGH and CO. 13, King-street, Snowhill, who keep stock of all Kimberley's Patent Goods, Flooring Cramps, &c.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, 55, & 57, WYCH-STREET, STRAND.

RESTELL'S PATENT ENGLISH PROTECTOR LOCK.

LOCKS, HINGES, HANDLES, BOLTS, &c.

Paris Exhibition, No. 1717.

Also Specimens at the Crystal Palace, Sydenham.

Illustrated Price-catalogues on receipt of four postage-stamps.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged their improved Premises in the Kings-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.—Houses and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentee's, POWIS, JAMES, and Co. Wholesale Iron Merchants and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

TO ARCHITECTS AND BUILDERS.

PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patent. Improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any bank, public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at 9d. shilling the foot.

R. S. NEWALL and Co's Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

Five ft.	14 14

Coverings, 5s per foot.
Fixing, 5s. per foot.

This valuable KITCHEN RANGE, the Manufacturer has much gratification in stating, has been in use several years, and given the utmost satisfaction. It may be used either with the fire open or closed, thereby avoiding the objection so naturally felt against having the fire in all times shut up, which is well known to generate a close unwholesome vapour.

The Prize Medal and Honourable Mention was awarded to this Range at the Great Exhibition of 1851.

To be seen in operation at the Manufactory,

J. SHERWIN, 93, TABERNACLE-WALK, FINSBURY.

Castings of every description in Loam or Sand.

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO. 1, Arthur-street East, London-bridge.

Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and CO.

8, Ridgmount-place, Hampstead, March 9th, 1855.

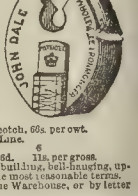
Gentlemen,—I have great pleasure in bearing testimony to the capabilities of your extraordinary Gas Cooking Apparatus, being the largest and most perfect in use. Suitable for hotels mansions, club-houses, private houses, and the army; having cooked in one day 1,000 fowls, and many cwts. of ham, beef, veal, mutton, lamb, pastry, &c.; roasting in one department a baron of beef weighing 300 lbs. in nine hours, fifty-three minutes, presented by J. Banister, esq. Threadneedle-street, to the directors, for the banquet given to the foreign ministers. They have been in full operation for ten months, and are now in as perfect order as when first finished. "They have not cost one shilling for repairs."

I am, Gentlemen, yours respectfully,
EDWARD HORNE.

Messrs. Deane, Dray, and Co.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and feeder department of Deane, Dray, and Co's establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. opening to the Monument, London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S office, 145, Regent-street, London.



HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 8s. 6d. This achievement in heating by hot water is unprecedented.

DEELEY'S PATENT SELF-ACTING FURNACE, for melting pig-iron. A saving of 66 per cent. in fuel over the cupola method. Furnaces can be erected to produce from one to ten tons of molten iron per hour, as may be required.—For particulars apply to MR. R. L. CURTIS, Surveyor, 1, Nicholas-court, Lime-street, City.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.

Register Stoves, 5½d. 6½d. 7d. 8d. and 9d. per inch.

Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—

3 ft., 2l. 18s.; 3 ft. 6 in., 3l. 5s.; 4 ft., 3l. 18s.

3-feet Cottage Ranges, with ovens and back boilers, 35s. each.

3-feet self-acting ditto, ditto, 36s. each.

Air Bricks, 4s. per doz.

Best Town Gips, 56s. Ditto, Scotch, 60s. per cwt.

Best Patent Sash Line.

4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	10s. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 35, High Holborn.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

STUART AND SMITH'S
PATENT GILL AIR WARMER.

TESTIMONIALS.

RICHARD REDGRAVE, Esq R.A.

"18, Hyde-park Gate, Kensington, February 24, 1855

"My dear Sir.—The Air Warmer continues to work very satisfactorily indeed, with regard to the main body of the house, and during this weather is charming, even in the painting-room. Mrs. Redgrave is extremely pleased with it in her domain, and says that she never enjoyed a winter before as she has done this, since the apparatus was fixed.—I remain, my dear Sir, yours sincerely,

"Mr. J. Jobson Smith." "RICHARD REDGRAVE.

JAMES SILK BUCKINGHAM, Esq. late M.P. for Sheffield.

"Stanhope-lodge, St. John's-wood, London, January 27th, 1855.

"Dear Sirs,—I am happy to be able to report to you most favourably as to the operation of your Patent Gill Air Warmer, which has exceeded the expectations I had formed of it. From a residence of many years in tropical climates, I have always been peculiarly susceptible of cold since my residence in England, and this has increased with increasing years and decreasing strength; I have, therefore, had recourse, from time to time, to various stoves and other modes of warming the hall and passages of my house; but I have never succeeded till now in producing an equal temperature over every part, and having that temperature completely under control, which your Air Warmer so effectually gives me. By its use we are really insensible to those changes of temperature and chills which are ordinarily produced in passing from warm rooms to cold halls and passages, and have the climate of May within doors in the months of December and January. The servants learnt its proper management in a few days without difficulty, and its economy in fuel is as remarkable as the many other good qualities it possesses. Indeed, I cannot speak too highly of it, and shall lose no opportunity of heartily advising its adoption to all who desire to protect themselves against the changes of temperature in their dwellings. I am, dear Sirs, yours faithfully,

"JAMES SILK BUCKINGHAM.

"To Messrs. Stuart and Smith, Roscoe-place, Sheffield."

M. E. HADFIELD, Esq. Fellow of the Institute of British Architects.

"Sheffield, March 6, 1855.

"My dear Sir, We have kept the Gill Stove in full operation during the past severe weather, and I have much pleasure in saying the result has been most satisfactory. The temperature of the house has been pleasant and equable, and the atmosphere perfectly free from the disagreeable oppressive odour produced usually by Hot Air Stoves. I can conscientiously recommend the principle to my friends as cheap and effective.—I am, my dear Sir, yours faithfully,

"Mr. J. Jobson Smith, Roscoe place." "M. E. HADFIELD.

WILLIAM RUTSON, Esq.

"Newby Wiske, Thirsk, 13th February, 1855.

"Sirs,—I wish to tell you what promise of comfort as well as of economy I have in the Gill Stove placed in the staircase of my house recently built. In spite of the disadvantages incident to an unfinished and unfurnished house, with all the doors open into the apartment rooms, it is keeping up a very genial influence over the temperature, even during this severe weather. The manner in which the air is admitted gives perfect control over the combustion; and I find, with coke at 16s. 8d. per ton, the rate at which it has been fired for the last two or three months, is 1½ per hour.

"I am, Sirs, yours truly,

"Messrs. Stuart and Smith "WILLIAM RUTSON.

"P.S.—Mr. Rutson, on looking again, sees the cost of coke for his Gill Stove, burning nine hours per diem, from 31st October to 9th February, for six days each week, was 3s. 9d. for coke—say about 3d. per day."

EDWARD MARTIN, Esq. M.R.C.S.

"Sheffield, Glossop-road, February 27th, 1855.

"My dear Sir,—I have now had the Patent Gill Air Warmer in operation during two winters, and the result has been extremely satisfactory. During the late severe frost, the comfort has been so great that I scarcely know how we could have done without it. Instead of the hall, staircase, and passages, being a reservoir of cold air, a genial warmth has been everywhere diffused; and when recovering from colds, my children have had the general run of the house without the fear of a relapse. To many invalids the invention will prove invaluable, giving them the freedom of their habitation instead of confining them prisoners to one apartment.—Believe me, my dear Sir, very truly yours,

"Mr. Jobson Smith." "EDWARD MARTIN.

E. F. SANDERSON, Esq.

"West-street, Sheffield, 27th March, 1855.

"Gentlemen,—The Gill Air Warmer you put up for me last year at Endcliffe, and which I recorded with some distrust and doubt, has been thoroughly tested during the past unusually cold winter. Having been accustomed to a dry climate, my family has been painfully sensitive of the damp and chilly air of this country; but by the happy effects of your Air Warmer the house has been kept at a most agreeable temperature by a continued ventilation of pure, warm, fresh air. This excellent apparatus must be invaluable to invalids and delicate persons. I most cordially offer my testimony in approbation of your effective plan of rendering dwelling-houses most equably comfortable in point of temperature.—I am, yours very truly,

"Messrs. Stuart and Smith, Roscoe-place." "E. F. ANDERSON.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.,

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS. DEVICES FOR GAS ILLUMINATION.

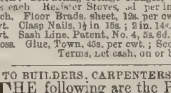
IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.



COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER-TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's Improved Fixtures. May be had either plain, galvanized, or enamelled. Every article for the harness room and stable kept in stock. — Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley-street, Oxford-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THIS IS THE ORIGINAL PATENT

for important improvements in stable fittings, including a method of rendering all others for conveying the straps and leaden weights to the back of the fittings, to prevent the horse getting at them. Stable Fittings of every description, enamelled or galvanized. All kinds of stable Furniture in stock; Iron Hurdles, Gates, Fencing, &c. &c. Manufacturer of Kite's Patent Noiseless Cast-Iron Smoke-Curing Chimney-Cans.—200 on Buckingham-palace. — Price Lists sent on receipt of two postage-stamps.

JAMES BARTON, Iron Founder, &c. 170, Oxford-street, a few doors East of the Pantheon.

TO BUILDERS, CARPENTERS, &c.

CABINET-MAKERS, &c.—To be had, at FREUND'S IRONMONGERY WAREHOUSE, 56, Church-street, Bethnal-green:—Self-acting Cottage Ranges, 30 in. 28s.; 33 in. 30s.; 34 in. 32s. each. Register Stoves, 9d. per inch. Elliptic ditto, 2½d. per inch. Floor Brads, sheet, 12s. per cwt.; Each Nails, 1s. 6d. per cwt. Clasp Nails, ½ in. 10s.; 2 in. 14s.; 2½ in. 13s. 6d.; 3 in. 13s. per cwt. Sash Line, Patent, No. 4, 5s. 6d.; No. 5, 8s.; No. 6, 9s. 9d. per gross. Glue, Town, 42s. per cwt.; Scotch, 60s. per cwt.

Terms, 1st cash, on or before delivery.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE:—

No. 3	4	5	6
4s.	5s.	6s. 3d.	7s. 9d. per gross.

At JOHN YOUNG'S, Birmingham and Wolverhampton, Agent, Factor, and General Ironmonger, 18, Blandford-street, Manchester-square, running out of Baker-street, Portman-square. Every other article equally reasonable.

LARK'S PATENT SMOKE-BURNER:

an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Coal-pits and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in all duties the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.

Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's.—JONES and BLAXTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BARRIS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c always in stock.

FOUNDRY AND IRON WORKS,

83, DRURY-LANE, and CHARLES-STREET, DRURY-LANE

GLOVER, BROS.,

Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, and Steam-engines; Range and Hot-plate Metal. An improved Seet Door, adapted for internal work.

A large stock of Rain-water Pipes, Plain and O G Gutters, Air bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 20 per cent. cheaper than Terra-cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book-safes and Strong Rooms, Tanks and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS,

168, DRURY-LANE, and CHARLES-STREET.

IRON FOUNDRY,

HARROW-STREET, LANT-STREET, SOUTHWARK.

W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—55 and 56, High Holborn.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

ESTABLISHED 1817.

WILLIAM HARRIER'S Smiths' Works,

Stove and Range Manufactory, and Ironmongery, Metal, and Zinc Warehouse, 18, Horseferry-road, and 1, New Peter-street, Westminster.—Contractors, Builders, &c. supplied with General Ironmongery at the lowest wholesale prices

Cottage Ranges, with oven or boiler, complete, 22s. each.
Self-acting ditto, with ditto, from 25s.
Self-acting Oven and Boiler Ranges, with wrought fittings, &c. complete, from 45s. each.
Register Stoves, from 4d. per inch.
Elliptic ditto, with double backs, from 2½d. per inch.

Cast-iron Rain-pipe	2	2½	3 inch.
	11d.	1s 3d.	1s 4d. per yard.
4-inch Eaves Gutters, 9d. per yard.			
O G Gutters	¾	4	6 inch.
	1s.	1s. 1d.	1s. 3d. 1s. 6d. per yard.
Best Cut Clasp	1½	2	2½ 3 inch and larger
and Rose....	12s.	13s.	14s. 6d. 16s.

1-inch Best Cut Lath, 12s 6d. per cwt.
Sheet Floor Brads, 13s. 6d. per cwt.
Hoop Floor Brads, 13s. per cwt.

Sash Weights, 7s. 6d. per cwt.; 9-inch Air Bricks, 3s. 6d. per doz.; 6-inch Sink Traps, 9s. per doz.; strong Coal Plates, with hooks, 30s. per doz. Sheet Zinc, Perforated Zinc and Tubing. Estimates given for Iron Railing, Gates, Balconies, and Ironwork of every description.

AUSTIN'S IMPERIAL

PATENT SASH and BLIND LINE,

can be obtained of all

ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY,

Established 1774.

SKAIFE'S GALVANIZING WORKS, Commercial-road, Lime'ouse, London.
Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where iron not liable to rust is required.
Patent Galvanized Iron supplied in every form.
Sheets plain and corrugated—Roofs fixed complete.
J. Skaife is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles.
An Allowance to the Trade.

PATENT IRON ROOFING and IRON BUILDING MANUFACTORY (late the Coalbrookdale Company's premises), 13, James street, Liverpool.—N.B. Parties are particularly requested to note the address, LIVERPOOL. FRANCIS MORTON and Co. will supply estimates, plans, &c. for Iron Roofs and Iron Buildings, painted or galvanized, to be erected in any part of the United Kingdom. Roofs and buildings prepared for shipment abroad. F. M. and Co. possess advantages from their long experience, and are enabled to execute work on the most moderate terms consistent with good materials and workmanship
N.B.—The attention of Agriculturists and Landed Proprietors is particularly invited to their Corrugated Iron Farm Buildings, Sheds, Roofs, &c.

PATENT GALVANIZING and CORRUGATING IRONWORKS (Improved Process).
WORKS—GLASS-HOUSE YARD, opposite the Entrance to the London Docks
GALVANIZED SHEET IRON and WIRE of every description superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.
ESTIMATES given for IRON ROOFS, Corrugated Sheds, Houses, &c.
A Discount allowed to the Trade.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire proof. Drawings and estimates furnished.
Island Foundry and Iron works, Millwall, London.
Offices: 12, Feuchurch-street, City.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, schools, cottages, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.
PLAIN, CORRUGATED, PAINTED, or GALVANIZED.
Estimates and Drawings furnished on application.
Experienced Workmen sent to all parts of the Country.
3, MANSION-HOUSE PLACE, and LIME-HOUSE, LONDON; BERKLEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON,
For Roofs, Flats, Cisterns, Gas Tubing, Gutters, Pipes, Fencing, &c.
To be obtained only at
TUPPER and CARR'S WAREHOUSES, NEW REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; or BERKLEY-STREET, BIRMINGHAM.
Sheets, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coal-scoops, Buckets, Pumps, &c. always in Stock.
N.B. An allowance to the trade.
Address all letters to TUPPER and CARR, 3, MANSION-HOUSE-PLACE, CITY, LONDON.

PATENT CORRUGATED IRON.—JOHN WALKER, Manufacturer of Roofs, Buildings, &c. &c. Works—Mill-wall, Poplar. Offices—Arthur-street West, London-bridge.

PATENT GALVANIZED IRON.—JOHN WALKER, Galvanized Iron Merchant, &c. The trade supplied. Corrugating by steam power capable of doing 100 tons per day, at the lowest remunerative prices, for bulk.

IRON-FOUNDER, &c.—JOHN WALKER, Iron-founder and Engineer.—Orders to any extent can be executed at his Works, Mill-wall, Poplar.—Apply at the Works.

BUILDER and CONTRACTOR.—JOHN WALKER, having his own Saw-mills, is enabled to CONTRACT for BUILDERS' WORK, at low prices, consistent with good work.—Apply at his Offices, Arthur-street West, London-bridge.

JOHN HENDERSON PORTER, ENGINEER AND CONTRACTOR, IRON BUILDING AND ROOFING WORKS, GAS-STREET, BIRMINGHAM.
LONDON OFFICE—1, RICHES-COURT, LIME-STREET.

A. MOREWOOD and CO. (late Morewood and Rogers), Dowgate Dock, Upper Thames-street, London, and Baskerville Works, Birmingham.
PATENT GALVANIZED TINNED IRON, and GALVANIZED IRON, in Sheets,
PLAIN or CORRUGATED, and Curved, of all Gauges.
Manufactured articles always kept in stock, such as pails, scoops, bowls, riddles, skips, &c. of all sizes.
Also the Patent Galvanized Tinned Iron Tiles, Gas and Water Tubing, Stamped and Moulded Gutters, Wire, Wire Netting, Hooping, Nails, Rivets, &c.
Estimates given for Roofs, and every description of Galvanized Building, at the
OFFICES and WAREHOUSE, DOWGATE DOCK, LONDON.

TO ARCHITECTS, BUILDERS, AND THE TRADE.
PATENT PLUMBIC ZINC.
GREAT REDUCTION IN PRICE.
PLUMBIC ZINC is a perfect combination of Lead and Zinc, and not unfrequently to be purchased such or one inch as thick as Sheet Lead, is consequently very much cheaper than that material, and at the reduced price costs but little more than Sheet Zinc.

No.			
No. 11 gauge weighs about	18	oz.	per foot super.
12	20		
13	23		
14	26		

Full particulars and the reduced price sent by post on application to
A. MOREWOOD and CO. DOWGATE-DOCK, LONDON, to whom all letters must be addressed.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc Tube, and Copper-Wire. Gas Pendant-, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

THOMAS EDINGTON, PURCHASER and INSPECTOR of CASTINGS on COMMISSION, 17, GORDON-STREET, Glasgow.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporizing) with all the improvements, under their Quadruple patents of 1849 51-54 and 1855 including their Gunpowder Proof Solid Lock and Door (without which no safe is secure).
THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.
MILNER'S PHŒNIX (only) SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47A, Moorgate-street, City. Circulars free by post.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE,
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Sise-lane, London.

ESTABLISHED 1803.

Full Security to Parties Assured by means of a Capital of ONE MILLION STERLING, for the last Fifty Years all Paid up and Invested.
Premiums particularly favourable to the younger and middle periods of life.
Two-thirds of Profits as Bonus.
Life Tables according to various plans, to suit the special circumstances of Insurers.
No charge for Stamps on Life Policies.
Fire Insurance Proposals entertained to any amount.
Liberality and promptitude in the settlement of claims.
Prospectuses—with full Tables and Details—and Forms—may be had at the Company's Offices, or of the Agents.
WILLIAM NEWMARCH, Secretary.
N.B. Life Insurance Premiums are allowed as deductions in Income Tax Returns.

ANNUAL DIVISION OF PROFITS.
GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY,
14, Waterloo-place, London, and 30, Brown-street, Manchester.
DIRECTORS.
THE CHISHOLM, Chairman.
RICHARD HARTLEY KENNEDY, Esq. Alderman, Deputy-Chairman.

Major-Gen. Michael E. Bagnold	William Morley, esq.
Francis Brodigan, esq.	Robert Francis Power, esq. M.D.
Alexander Robert Irvine, esq.	Archibald Speck, esq.
John Inglis Jerdein, esq.	Frederick Valiant, esq.
James John Kinloch, esq.	Rev. F. W. J. Vickery.
Henry Lawson, esq.	

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums. Policy-holders participate in profits after payment of five annual premiums.
The Annual General Meeting of this Society was held on the 30th of May, 1855, when a Report of the business for the last year was presented, exhibiting a most satisfactory progress. It appeared that during the two last years, 1853 and 1854, between 800 and 900 new Assurances had been effected, producing an increase of premium income amounting to £1,903. per annum. It also appeared that, notwithstanding the extraordinary mortality which prevailed during the last year in consequence of the prevalence of the cholera, the Reserve found necessary for the risks in the slightest, the allowance previously awarded to the Policyholders
The Members present at the Meeting were fully satisfied with the Report, and resolved unanimously that a Reduction of 3½ per Cent. should be made in the current year's Premium payable by all Policyholders now entitled to participate in the profits.
Credit is allowed for half the Annual Premiums for the first five years.
The following Table exemplifies the effect of the present reduction:—

Age when Assured.	Amount Assured.	Annual Premium originally paid.	Allowance of 3½ per cent	Annual Premium now payable.
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	6 11 6	14 6 0
30	1,000	25 13 4	8 1 8	17 11 8
40	1,000	33 18 4	10 13 8	23 4 8
50	1,000	48 16 8	15 7 8	33 9 0
60	1,000	73 17 6	23 18 0	51 19 6

A. R. IRVINE, Managing Director.
14, Waterloo-place, London.

SECURITY TO EMPLOYERS.
THE TIMES ASSURANCE COMPANIES.
To Clerks and others guarantees at the lowest rates.
Plate Glass Assurance.—Windows, mirrors, &c. insured against breakage.
Every description of life and fire assurance.
Apply to the Manager, 32, Ludgate-hill.

THE OBJECTS MOST TO BE DESIRED IN EFFECTING A LIFE ASSURANCE.—These are, Perfect Security and the Largest Benefits in proportion to the Contributions paid. They are both fully attained in the SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY, which is now of twenty-four years' standing and possesses accumulated funds, arising from the contributions of members only, to the amount of 916,847l. and has an annual revenue of 163,394l.
The MUTUAL PRINCIPLE being adopted, the entire surpluses or "Profits," as ascertained triennially, are allocated in addition to the sums assured, and they present a flattering prospect to the members. For example: the sum now payable on a policy for 1,000l. effected in 1831, is 1,538l. 9s. 9d. being a return of seventy-one per cent. on the premiums paid on middle-aged lives, and policies effected in later years are similarly increased.
The NEXT TRIENNIAL DIVISION of PROFITS will take place on 1st MARCH, 1856, and policies effected previously will receive one year's additional bonus over those entered after that date.
ROBT. CHRISTIE, Manager.
WM. FINLAY, Secretary.
Head Office—26, ST. ANDREW-SQUARE, EDINBURGH.
Office in London—126, BISHOPSGATE-STREET.
Agent—WILLIAM COOK.

SMOKE! SMOKE! SMOKE!—The only cure for smoky chimneys is MARK BERRY'S IMPROVED VENTILATOR: price, for 10-inch pot, 7s. 6d.; 11-inch, 8s. 6d.; 12-inch, 9s. 6d.—at MARK BERRY'S Wholesale and Retail Zinc and Galvanized Iron Works, Whitechapel Church-yard, London.

LOOKER'S PATENT TUBULAR VENTILATOR is the CHEAPEST and most ORNAMENTAL yet introduced for effectually admitting pure air without a perceptible draught. Decorated to suit any building or apartment.—Particulars and prices may be obtained, and specimens seen, at the Office of Mr. J. PATMAN, Architect, 4, Serjeant's-inn, London; or on application to BENJAMIN LOOKER, jun. Patentee, Kingston-on-Thames.

VENTILATION.—PURE AIR.
Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.
With single pulley, from 6s. each; with leading pulley, from 8s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Stringing to any pattern for ingabelle tables.
Diving-dresses of superior make, and improved Vulcanized Rubber Apple-pipes for ditto.
Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.
N.B. All communications and orders punctually attended to, addressed to the Manufactory of JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.
CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, hose and tubing; also for gas-holders, sand pumps, alkali cisterns, &c. &c. Articles, moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge street, Manchester.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter: FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1853.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

METALLIC PROTOXIDE PAINT.—This Paint has been in extensive use and severely tested on the Great Western, North and South Western, Midland, York and North Midland, and other railways; the new Houses of Parliament, British Museum, Lambeth Palace, East and West India Docks, &c. The Protoxide Paint unites most intimately with iron, preventing oxidation, and rendering it equal to galvanized. It is of great value when applied to iron vessels, roofs, steam and water pipes, and their joints, and for coating the inside of sugar moulds. It is not affected by foul air or gas of any kind, and dock-houses, &c. can be painted during occupancy, without the least risk to the health of the inmates. It preserves wood from decay, and will be found effectual in preventing discolouration on stuccoed buildings, and keeping out all dampness.
D. and G. BRYMNER, Agents for Scotland.
Greenock, August 1st, 1855.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.
The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.
The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents, in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 6, Tottenham-court, New-road. In Manchester and Liverpool, by R. CLAY, 3, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.
The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.
For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 23, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

J. CHILLINGWORTH, Modeller and Letter Maker, respectfully invites the attention of the building public, to his well assorted stock of Enrichments in Composition, Cement, and Plaster, consisting of Bed Mouldings, Ceiling Flowers, Caps, Trusses, &c. &c. Workmanship first-rate, and charge low. Projecting letters in every variety of pattern, in wood or composition. Specimen of letters on front of "The Builder" Office, and in all the main thoroughfares of London.—Manufactory, 32, Francis-street, Westminster-road.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

Author of "The Natural History of Creation," "Indications of Instinct," &c.
CONTENTS.—1. The Revelations of the Laboratory. or the Present State of Inorganic Chemistry.—2. The Crust of the Earth, or the Chemistry of Geology.—3. Matter Vitalised, or the Present State of Organic Chemistry.—4. The Chemistry of Life, or the Chemico-Physiological Laws of Animal and Vegetable Life.—5. The Application of Chemistry to the Arts.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

FUEL AND ITS APPLICATIONS.
Now ready, new edition, in two vols 8vo. cloth, beautifully Illustrated, price 36s. post-free.

CHEMICAL TECHNOLOGY; or, Chemistry in its Applications to the Arts and Manufactures.
By Dr. E. RONOLDS, of Galway, and Dr. T. RICHARDSON, of Newcastle-on Tyne.
Vol. I. in Two Parts (Fuel and its Applications), illustrated with 453 Engravings and SIX Plates.
Vols. II. and III. of the Chemical Technology contain Glass, Potteries, Flour, Sugar, &c. &c. illustrated with 343 Engravings and Ten Plates. Price II. 1s. and II. 2s. per vol. post-free.
London: HIPPOLYTE BAILLIERE, Publisher, 219, Regent-street, and 290, Broadway, New York, U.S.

Neatly bound, price 4s.

A HANDBOOK of ARCHITECTURE for the UNLEARNED: in a Series of Letters to a Lady, embodying a Popular Sketch of the History of Architecture, and the Characteristics of the various Styles which have prevailed.
By GEORGE GODWIN, F.R.S. &c.
With Illustrations
By the same Author, price 1s.

LONDON SHADOWS; or, a Glance at the Homes of the Thousands. With Illustrations.
Office of "The Builder," 1, York-street, Covent Garden; and from any Bookseller.

HYDRAULIC TABLES, for the use of Engineers engaged in River, Thorough Drainage, Sewerage, and Water Works.
By JOHN NEVILLE, C.E. County Surveyor of Louth.
"A useful aid. Mr. Neville has included all that is requisite, and fully succeeded in his design."—*Civil Engineer and Architect's Journal.*
"The author has exhausted the entire circle of hydraulic experiment and analysis."—*Mechanics' Magazine.*
"In the ever-changing requirements of the civil engineer, the work before us will be eminently serviceable."—*Morning Advertiser.*
London: JOHN WEALE.

THE NUISANCES REMOVAL ACT, 1855.
TO SURVEYORS OF HIGHWAYS AND OTHERS.
In a few days will be ready, in 1 vol. 12mo. price 5s.

PRACTICAL PROCEEDINGS for the REMOVAL of NUISANCES and EXECUTION of DRAINAGE WORKS in every Parish, Town, and Place in England and Wales, under the NUISANCES REMOVAL ACT, 1855, and by other Course of Law. With numerous Forms and complete Instructions for the Conduct of Parish Committees. To which is added, THE DISEASES PREVENTION ACT, 1855.
By TOULMIN SMITH, of Lincoln's-inn, Esq. Barrister-at-Law.
*** Sent free, by post, on receipt of a Post-office Order (payable to either of the Publishers) for 5s.
London: HENRY SWEET, V. and R. STEVENS and G. S. NORTON, and W. MAXWELL, Bell-yard.

THE LIMITED LIABILITY ACT, 1855.
In a few days will be published, in 1 vol. 12mo.

THE LIMITED LIABILITY ACT, 1855, and the Act for the Registration, Incorporation, and Regulation of Joint-Stock Companies (7 and 8 Vict. cap. 110), under which Companies, with limited liability, are to be formed. With an Introduction, Notes, Forms, and Index.
By GEORGE SWEET, Esq.
Of the Inner Temple, Barrister-at-Law.
London: HENRY SWEET, V. and R. STEVENS and G. S. NORTON; and W. MAXWELL.

METROPOLIS LOCAL MANAGEMENT ACT, 1855.
In a few days will be ready, in 1 vol. 12mo.

A COMPLETE EDITION of this Act, with practical Notes, and Forms, and an Index.
By TOULMIN SMITH,
Of Lincoln's-Inn, Esq. Barrister-at-Law.
London: HENRY SWEET; V. and R. STEVENS and G. S. NORTON; and W. MAXWELL.

Third Edition.

THE BUILDER'S FRIEND, Price One Shilling.
Office of "The Builder," and of all Booksellers.

NUISANCES REMOVAL ACT for 1855.
BOOKS of FORMS necessary for carrying the same into operation.
Prepared, with Instructions for use, by TOULMIN SMITH, Esq.

I. PRESENTMENT BOOK, for ENTRY of COMPLAINTS. (100 sheets in each book, price 7s. 6d. bound.)
II. INSPECTOR'S REPORT BOOK. (100 sheets in each book, price 7s. 6d. bound.)
III. ORDER of AUTHORIZATION to INSPECTOR. (100 sheets in each book, price 6s. bound.)
IV. NOTICE of APPLICATION for ORDER of ADMISSION. (100 sheets in each book, price 6s. bound.)
V. NOTICES of NUISANCE, and REMEDY. (250 sheets in each book, price 12s. bound.)
VI. NOTICES of COMPULSORY PROCEEDINGS. (100 sheets in each book, price 6s. bound.)
VII. NOTICE to OCCUPIERS FOULING DRAINS. (100 sheets in each book, price 10s. 6d. bound.)
VIII. LICENSE to USE COMMON DRAINS on PAYMENT. (100 sheets in each book, price 12s. 6d. bound.)
A complete set of the above, price 3l. 6s.
These forms may also be had with the title of each parish or district specially printed, at a small advance.
Sent free, by post, on receipt of a post-office order (payable to either of the publishers) for the above amount.
London: H. SWEET; V. and R. STEVENS and G. S. NORTON; and W. MAXWELL.

PRACTICAL MECHANICS' JOURNAL. Part XC. September, 1855. 1s.
Illustrations: Large Copperplate Engraving of M'Connell's recent Improvements in Locomotive Mechanism, and twenty Woodcuts.
Contents:—Great Exhibition at Paris, 1855, by our own Correspondent; Confirmation of Letters Patent, by authors of the "Patentee's Manual," Heim's Process for Making Paper from Straw; Strong's Apparatus for Removing Locomotive Engine Wheels, Chaplin's System of Forced Combustion in Furnaces; Compound Stop and Throttle Valves; Captain Norton's Clayhall Draining; Laurent's Carriage Axleboxes; Torbane Blackening for Foundry purposes; Gwynne's Centrifugal Pumps; Bennett's Percussion Cap and Cartouche Box; Filling Gas Tubes with Mercury; Smith's Miners' Safety Cage; New Carpenter's Hinge; Marine Memoranda; Hobb and Hill's Tubular Steamed Mast; Reviews of New Books; Lists of New Patents and Registered Designs.
HEBERT, 88, Cheapside, London. Editor's Offices (Offices for Patents), 47, Lincoln's-inn-fields, London.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. IX. for September, just published.
GEO. ROUTLEDGE and CO. Farringdon-street; and R. SPENCER, 314, High Holborn.

PHOTOGRAPHY.—A complete Apparatus, 3l. 3l. 6s. and 11l. 11s.—Send for a List, post-free, to GILBERT FLEMING'S, 498, Oxford-street, Author of "First Steps in Photography," price 6d.; by post, 7d.

"The finest we ever saw."—*Art-Journal.*
"Unequalled for beauty."—*Morning Advertiser.*
"Superior to anything yet produced."—*Morning Herald.*
"Invaluable aid to intellectual progress."—*Globe.*
"One of the wonders of the age."—*Britannia.*
"Of inestimable value to the fine arts."—*Sir David Brewster.*

TO ARCHITECTS.—HAVE YOU A STEREOSCOPE? If not, at once secure this very valuable aid to your profession. Architectural beauties in abundance, standing out in all the reality of actual existence. A beautiful instrument, with brass eye pieces and seven views sent for ONE GUINEA.—London: Stereoscope Company (corner of Hanover-square Gates), 313, Oxford street. A visit solicited.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. B. BARLOW, 2, Thavies-inn, Holborn (between 1 and 3 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

TO ARCHITECTS.
COMPETITION and other DRAWINGS.—MR. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services to Painting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, MR. BOYS, 29, Albany-street, Regent's-park.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. Terms—Day Pupils Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, T Squares, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 54, Guildford-street, Russell-square.

THE ARCHITECT'S, BUILDER'S, CIVIL ENGINEER'S, and MACHINIST'S DRAWING ESTABLISHMENT, conducted by T. J. HILL, Architect, for giving instruction in Architecture, Civil Engineering, Measuring, and Valuing Buildings, Land, Timber, and in preparing Finished and Detail Drawings, &c. A separate class for Measuring-up Works, Taking out Quantities; also for Architectural Colouring.—For prospectuses, apply at the Offices, 15, Old-street, City-road.

ENGINEERS, MECHANISTS, ARTISTS, BUILDERS, CHEMISTS, MUSICIANS, and all SCIENTIFIC Professionals and Amateurs, will find at the ROYAL POLYTECHNIC every Novelty, in Peace or War, likely to interest them. Capitalists, or Students, MODELS on the largest scale; LECTURES by the ablest professors; EXHIBITIONS constantly varied, and most instructive and amusing. Open twelve hours daily. Admission to the whole, ONE SHILLING. Liberal arrangements entered into with conductors of Railway Excursions, heads of Schools, Factories, and large employers of skilled Labour; and Special Illustrations given for Operatives and Scholars. Inventors and Manufacturers of Unique Articles of Utility or Beauty are invited to judge for themselves of the advantage of having their Designs and Products displayed at the POLYTECHNIC, the most frequented and highly patronised Institution of the kind in Europe, and one invariably visited by all seniors and celebrities arriving in London. Particulars on application, personally or by letter, to J. H. PEPPER, Esq. Managing Director.

The Builder.

Vol. XIII.—No. 657.

THE object Mr. Street has in his new work, "Brick and Marble in the Middle Ages," from which we have already given some extracts,* is to point out the peculiarities of the development of Pointed architecture in Italy, and especially to show in what way the materials so commonly used there—brick and marble—were introduced both in decoration and in construction. This should affect us practically. There is nothing connected with our art in which improvement is more needed and more practicable than the use of brick in architecture. And in this point of view particularly, we are disposed to welcome warmly Mr. Street's elegant volume, and to aid to the extent of our power in giving it circulation. The art of the bricklayer is at a very low ebb in England: compo and contracts have left us but little of it. Saying nothing of the rows beyond rows of unsubstantial structures reared throughout the suburbs simply to sell, the existence of which might be almost sufficiently explained by supposing that—

"Casual bricks in airy clime,
Encountered casual horsehair, casual lime,"—

in our most extensive and important buildings of brick, anything more than solid work is seldom if ever attempted.

From time to time, and for a long time, we have sought to turn the attention of architects and brickmakers to the use of clay, to which we are restricted as a material for building in so many parts of the kingdom, in other and more ornamental forms than a would-be rectangular parallelopiped 9 inches long, 4½ inches wide, and 2½ inches high, without a sharp arris, or a square side. Here and there endeavours have been made, and are being made, to effect an improvement in this respect. Hitch, of Ware, did something in this way very long ago; then Bakewell's screw presses for the formation of moulded bricks, good and cheap, were looked forward to. Messrs. Bowers, of Tunstall, patented a method of making brick ornaments, and, not to mention many others, at the "Poole Architectural Pottery," experiments in mixing different sorts of clays, colouring, &c. are now being made preparatory to commencing operations.† A leading architect in Nottingham, aided by the spirited owner of a fine bed of clay, and prompted admittedly by observations which have appeared in these pages, is introducing moulded brickwork to a considerable extent in that district. Mr. Street's book will, we have no doubt, help the movement. He went by the way of Zurich and Brescia to Verona, Venice, Mantua, and Milan, and he has illustrated his notes with seventy-four engravings from his sketches made on the road. Some of these we have been permitted to transfer to our pages, and the sample thus given will probably induce many of our readers to desire to possess the whole. Mr. Street is a determined mediævalist. He went away resolved not to look at any of the works of the Renaissance, for which, like the popular writer whom he imitates somewhat closely, he exhibits the greatest contempt. With Palladio he has of course no sympathy:—

"And is it possible, my readers will exclaim (he says), that you, an architect, can have dared to pass within sight of Vicenza without making long sojourn there to drink in the lessons which the works of your great master Palladio are there to instil! Even so, reader; for in this world there are unhappily two views of art, two schools of artists—armies of men fighting against each other;—the one numerous, working with the traditions and rules of their masters in the art, exclusive in their views, narrow in their practice, and conventional in all their proceedings, to the most painful forgetfulness of reality in construction and in ornament; the other young and earnest, fighting for truth, small in numbers, disciples of nature, revivers of an art to all appearance but now all but defunct, yet already rising gloriously above the traditional rules of three centuries;—the one class representing no new idea, breathing no new thought, faithful to no religious rule; the other rapidly endeavouring to strike out paths for themselves as yet untrodden, gathering thoughts from nature, life from the intense desire for reality and practical character, faithful moreover to a religious belief, whose propagation will be for ever the great touchstone of their work;—the one class, the disciples of Palladio, journeying towards Vicenza with reverence, to learn how he built palaces of compo with cornices of lath and plaster, already in two short centuries falling to decay, wretched and ruinous; the other stopping long at Verona, dreaming over the everlasting art of the monuments of the Scaligers, and of the nave of Sta. Anastasia, still, though five centuries have passed with all their storms about their heads, fresh and beautiful as ever, fit objects of veneration for the artist in all ages."

Mr. Street is led at times by his enthusiasm—shall we call it?—into strange statements, as when he glorifies the sunken and twisted, though beautiful, pavements of St. Mark's, for *not* being level and even,—for swelling "up and down as though they were petrified waves of the sea, on which those who embark in the ship of the Church may kneel in prayer with safety, their undulating surface serving only to remind them of the stormy seas of life, and of the sea actually washing the walls of the streets and the houses throughout their city!" There is a superabundance too of "glorious" and "noble," but we are looking at the book as to its practical value.

The brick campanile tacked on to what Mr. Street wrongly calls "a hideous *classic* edifice"—the church of S. Andrea, at Mantua—affords some good details. Figs. 1 and 2* exemplify this. The tracery is formed by cusped circles pierced in a tympanum within an inclosing arch: the shafts between the lights are of polished marble, and coupled one behind the other. The proportion of the cusps in this and most other Italian buildings is mostly good. "In trefoils, for instance, the upper cusp is by far smaller than the lower; and in all good cusping it must be so. Modern men generally reverse the order, and at the present day, so little is the subject really understood, that at least ninety-nine out of every hundred cusped window-openings are designed without feeling, and quite unlike the best old examples; and this, though apparently a point of very small importance, is really of great consequence to the perfection of any pointed work."

We give a view of the campanile itself (fig. 3): the smallness of the octagonal lantern with spire, and the abrupt manner in which it is set upon the square, produce a bad effect.

The campanile of the Palazzo dei Signori, at Verona (fig. 4), is a better example of Italian tower-building. It rises "out of a large pile of buildings, and for a short distance above their roofs is built in alternate courses of brick and a very warm-coloured stone, and then entirely in brick, pierced with only one or two small openings, and terminating with a most gloriously simple belfry-stage: the belfry windows, with their arches formed without mouldings, and with the sharp edges only of brick and stone used alternately, are divided into three lights by coupled shafts of shining marble: the shafts, being coupled one behind the other, and thus giving strength with great lightness, are very striking in their effect. They have, too, remarkably large balconies, but without balustrading of any kind. The upper and octangular stage of the campanile is I think comparatively modern, but perhaps rather improves the whole effect."

Fig. 5 is a window from Cremona Cathedral. The bricks all radiate with the arch (not from centre of cusp), and look as though they might have been built, allowing plenty of length of brick for the cusps, and then cut to the proper outline. In all cases where brick is used for tracery, it is "plate-tracery." The tympanum of the arch is filled in with a mass of brickwork, through which are pierced the arches over the several lights of the window; and these are supported on marble or stone shafts with carved capitals, instead of monials. Above these sometimes, as in the example we have given from S. Andrea at Mantua (fig. 1), are three cusped circles. A panel of terra-cotta, with a moulded ornament and ornaments in the mouldings, vary others. Labels are rare, but in their place is introduced a course of very narrow deep-red bricks, which surrounds the back of the arch By the use of deep-red bricks in courses alternating with a very warm-coloured stone, agreeable effects are produced in these Italian buildings. A general perception of this fact, by the way, appears to be creeping over England. We have seen lately numerous small evidences of it, some of them melancholy enough. Where effect of this sort is desired, architects should satisfy themselves as to the goodness of the material. We have a letter from Spalding, in Lincolnshire, which says that certain red bricks, which were used in the entrance-archway of the Cemetery there, alternating with stone courses, and with good effect, have suddenly become quite pale, as if ashamed of a previous imposition!

Fig. 5.—Brick Window, Cremona Cathedral.

The windows in Verona recall the memory of those in Venice, but are generally inferior. Fig. 6 is a specimen.

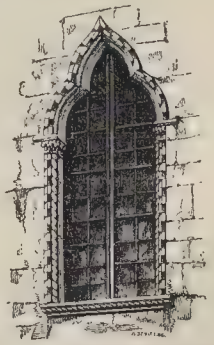

Fig. 6.—Domestic Window, Verona.

* See p. 377, ante. "Brick and Marble in the Middle Ages: Notes of a Tour in the North of Italy." By G. E. Street, Architect, F.S.A. London: John Murray. 1855.

† Of the clay-fields at Poole, we shall have to speak again soon.

* See p. 427.

Fig. 7 is a two-light window in red brick, from the cathedral at Monza.

Touching the marble shafts, which we have said carry the arches of the window-lights, Mr. Street points out what must strike all architectural observers in Venice,—the constant and unsparing use of the shaft there during several centuries, when little used in England, and cries—

"All shame to us if we do not attempt for the future so far at any rate to follow in their steps! So rare are any but shafted windows in Venice, that at present I hardly remember a single instance of a window with monials formed by the continuous mouldings of the tracery; and it is obvious that this gave occasion, not only to the use of beautiful marbles—never so well used as in shafts,—but also to the constant use of carved capitals. In domestic buildings, as I have before remarked, this arrangement of shafted windows is very valuable, because it suggests one obvious way in which we may unite traceried windows with the very newest arrangement of window-frames or sashes in the most comfortable nineteenth-century houses; for in these Venetian palaces the glass was always contained in a separate wooden frame within the marble shafts and tracery."*

Our author attributes the continued use of the bearing shaft to the influence of classic art, which was so potent upon Italians. He sees the effect of the same influence in their cornices, and gives fig. 8, from S. Francesco, Brescia, as an example.

Fig. 8.—*Cornice; S. Francesco, Brescia.*

The Venetian balconies, which are for the most part very elegant and pleasing, almost always consist of a number of small shafts with carved capitals, supporting a piece of stone, the underside of which is notched into trefoils resting on the capitals. Here we have an example (fig. 9), quaintly finished at the angles with figures of animals. The angle windows, too, in Venice, as most visitors must have noticed, are very effective. Fig. 10 is an example. It has a bold shaft at the angle, whilst the jambs are ornamented at their angles by a twisted cord-like moulding, which is frequently met with in the later work.

The value of the simple detached circular shaft, and the beauty which the cusping of a large arch in a proper manner gives, cannot be too strongly dwelt on.

The doorway of the Broletto, at Brescia (fig. 11), is executed mainly in stone, and has some traces of fresco in the tympanum.

Our author urges strongly the importance of introducing more colour in the interior of our buildings, and bids architects remember it is they who must bring this about:—

"Could we but place one of our cold bare places of worship by the side of S. Mark's, and let the development of Christian art in the construction of the fabric be ten times as great in our northern church as in the Venetian, we may yet rest assured that every religious mind would turn at once to the latter, and scarce deign to think of the former as a place for worship at all. If this is so, does it not point most forcibly to the absolute necessity for the introduction of more colour in the interior of our buildings, either in their construction, or afterwards by the hand of the painter? And architects must remember that this ought all to be within their province as directors or designers; and therefore, that they must not, as now, venture to design cold shells, which may or may not

* "This arrangement is not by any means unknown in Northern Europe, though certainly comparatively uncommon. There is an example of the thirteenth century at Easby Abbey, Yorkshire, whilst in France the wonderful collection of ancient houses at Clany all have it, and at Ratisbon, one of the most interesting cities in Germany, every one but of a great number of houses of the twelfth and thirteenth centuries, of prodigious architectural interest also, has it."

BRICK AND MARBLE ARCHITECTURE IN ITALY.

afterwards receive the necessary and indispensable decorations, but from the very first must view these decorations as part and parcel of the work in which they personally are concerned: then, and not till then, shall we see a satisfactory school of architects in England."

In closing our notice of the contents of this work, we cordially recommend it to our readers, as containing much that is both new and useful.

THE RECENT HISTORY OF ARCHITECTURE.*

WORKS OF HENRY HOLLAND, JAMES WYATT, AND OTHERS.

BY comparison with the works undertaken within a few years after 1815, those belonging to the period of the war were executed under a condition of *art* approaching to paralysis. As the course of our history may eventually show, even the questionable taste for which credit has been given to George IV. as the Augustus of England, furnishes a marked contrast to that of the reign which preceded.

If the present war is to bring with it a loss of aids, most important to human progression; according to the experience of the last war, it might indeed in that way inflict an amount of disaster equal to that of the sacrifice of life and treasure. Such, however, is the incidental and inevitable result of wars. Education, civilization, social condition,—in short, progress of every kind, in ordinary affairs, or in science or art,—what does not involve as a condition of it, the interchange of thought? At all times, there has been much of insular exclusiveness in English character. Establish a barrier against outward impressions, and a nation, like an individual, will speedily wear out any stock of ideas. It is not merely the spur of emulation, not merely the means of estimating the true position, that will be lost. Ideas multiply and procreate in combination. In the trituration of many minds, the sustaining aliment of progress is produced. Even with some materials gathered together in that spirit of research which we found to have become a European characteristic, compensation did not accrue to art in England, for the ignorance of much that was old, and all that was recent or contemporary on the Continent. Therefore, nothing could be worse than the state of general taste in the latter part of the reign of George III.—the Regency, of course, inclusive. We may admit, that painting retained the eminent position it had acquired; and sculpture, likewise, was cultivated with no mean power. The opportunities which the war created for the production of monuments and works in portraiture, were themselves sufficiently numerous. But as to some branches of united ART, wherein, as we must continue to believe, is most evinced the feeling for art, as *art*; we mean, as matter distinct from representation—the deadness of intellect was complete. In the exteriors of ordinary houses, or in the style of interior finishing—we can hardly call it *decoration:* in the common articles of furniture and household use, there is the same blank and vapid character. Any considerable attempt that might perchance be made, displayed a total ignorance of the *nature* of art. So that, generalizing, we could only say that the age had *no* Art.

As for the chance of the proper use of ancient models,—whilst that use implies the study of, and deduction from them, rather than the moulding of copies, it implies also the comparison of a large and varied number. Without the estimation of the merit which there is in each and all, the elements of good art—propriety of character and novelty (neither of which, as we lately argued, can be wholly spared for the other),—would not bear their proper relation in any new work. Probably, however, those who had the means of influence in their hands, knew less of Italy and the continent than was known during the reign of Elizabeth, or to the travelling ecclesiastics of a previous time. Illustrated books were almost inaccessible even to architects; and, whatever may be the difficulties now, of bringing the influence of professional knowledge to bear upon public taste, the difficulty must have been greater formerly, by reason of the limited number of architects. Those who did find scope for practical undertakings—and the number of men being small, they were generally kept well employed,—had all the distracting claims involved in a decision on the point to which we referred,—the question of predominance of novelty, or of purity of style. Architecture in Europe had greatly emancipated itself from the vicious influence of a Borromini, but, with some exceptions, only to be resigned to the mannerism of a cold version of Palladianism; and we have shown that the architects of the Burlington school were rapidly falling into practices, tending to the loss of all the characteristic features of our special art. The better manner of Sir Robert Taylor and Sir William Chambers, and the eccentric style of the Adams, had supervened. The doctrine of absolute novelty next was supported by Sir John Soane.

But, although the expression of art observed in our streets—whether in ordinary houses, or in the majority of public buildings—has been in great part produced since 1815; a certain number of works were of necessity undertaken during the period of the war, and by architects who deserve notice. We have referred to some of those; but the names of Henry Holland and James Wyatt are too important to be passed over. The former died in 1806. His principal works were—the theatre of Drury-lane, which was destroyed by fire, in 1809; the theatre at Covent-garden (or the greater part thereof), destroyed in 1808; the front and screen of Carlton-house; and the main part of Melbourne, or Dover House, Whitehall. He was also architect of the far inferior work—the Pavilion at Brighton, shown in the "Vitruvius Britannicus," and which was subsequently remodelled under Nash and Porden; and the design of the front of the India-house, ascribed by Mr. Cunningham, Mr. Timbs, and most other writers, to R. Jupp, the surveyor to the Company, under whose direction the work was executed, is attributed by the writer in the "Penny Cyclopædia," with great probability, though we know not on what conclusive authority, to Henry Holland.

The theatre of Drury-lane was commenced in the year 1791, on the site of the old house,—a structure of small dimensions internally, slightly decorated in the style of the Adams, and celebrated as the scene of the performances of Garrick. Holland's theatre is described as having occupied more ground than the present house; the quantities given amounting to respectively, 49,600 and 32,400 superficial feet. We doubt whether as to building area, the excess could have been what would here appear. The west end of the building was some yards distant from Brydges-street,—from which, however, there was a pit entrance by a passage. The main entrances were from Russell-street, on the north, and from a street called Woburn-street, on the south. There were colonnades for part of the length,—similar to that which has been added to the present structure in Russell-street,—though not projecting over the footway,—the main building being set back. The exterior appears to have been very plain,—but was, at all events, not inferior to present theatres—than which it would be difficult to find any class of edifices so singularly unsuccessful in effect;—and that, whether they attempt little, or attempt much. But the view of the interior in Wilkinson's "Londina Illustrata," justifies what was thought of Holland's theatre at the time of its completion. The shafts, or supports to the tiers of boxes (of which last there were several, as in the present theatre), were moulded, so as to have a very tasteful character, as compared with present contrivances. The tiers of columns carried arches,—supporting the ceiling,—the arches being hung with drapery. The lattice-work pattern,—in general use at this time and later, through mere absence of art—was indeed everywhere; but effect was redeemed by a superior character of classical ornament,—as paterae and Vitruvian scrolls—and well-grouped panelling to the fronts and backs of the boxes. The misconception of principles which we could hardly help noticing in any work of this date, is evinced in some of the decorations of the proscenium, where, on each side, backed by a group of flags and trophies, was a large flaming urn.

Difficulties appear to have retarded the completion of the building; though probably they were not such as should dim the fame of the architect. 150,000*l.* the amount of the estimate, had been raised in 300 debentures of 500*l.* each. The manner of paying the regular interest seems not to have been thought of. In the present building, and nearly all other works of the class, the extraordinary rapidity of execution, which is general, has been disadvantageous, at least with regard to decorative character; and from that haste results much that we should see reason to object to in the ephemeral ornaments of the interiors. However, in 1794 Holland's theatre was opened with an oratorio. In the first dramatic representation John Kemble, Mrs. Siddons, and Miss Farren appeared, and Charles Kemble took his first part. The play was "Macbeth." An attempt to leave out the ghost of Banquo was given up, at the remonstrance of the galleries; and a lake of real water was exhibited. Then, or shortly afterwards, an iron curtain seems to have been added to the proscenium, with the view of shutting off the auditory, should any fire break out behind the scenes; and two immense reservoirs were placed in the roof. When the fire did occur, in fifteen years' time, these provisions, like others in similar cases, were found to be of no avail,—the reservoirs being empty or forgotten, and the curtain having been removed a few months previously, as it had become too rusty to work. Respecting the difficulties the architect had to contend with, an anecdote is told which may bear repeating, even in this place. Though every one seems to take liberties with the Sheridaniana,—very reprehensible in dealing with these classics of English literary and domestic history, we will merely try to throw such light as knowledge of professional matters might be expected to do, in the telling of the present story.

The theatre had, it appears, been opened, and nothing remained to be done but the usual agreeable business of settling the accounts. Our practical readers might say,—fancy Sheridan at such a task! The duty was put off until Holland became impatient, or perhaps the builders with him. Mr. Sheridan was *nowhere*, or rather, everywhere. At his house he was "not at home;" at the theatre, he had "just stepped out;" at clubs and other resorts, he had "gone to his house." But after a few weeks, the architect one day tracked the manager to the stage door. Holland overpowered the porter and detected Sheridan on the stage with a party of gentlemen, to whom he was showing the theatre. Sheridan saw his architect approaching: escape this time was impossible. He therefore put a good face on the matter. "Ah! my dear fellow," said he, "you have come quite *àpropos*. I am truly sorry you have had the trouble of calling on me so often; but

* See p. 397, *ante*.

now, in a few minutes I shall be at liberty: we will then go into my room and settle our affairs. But first, you must decide an important question here. Some of these gentlemen tell me there are loud complaints that the transmission of sound is defective in your beautiful theatre,—that, in fact, the galleries cannot hear at all, and that this is the reason they have been so noisy of late." "Sound defective! not hear!" ejaculated the astonished architect, turning pale. "Why it is the most perfect building for sound that ever was erected: I may stake my reputation the complaint is groundless." "So say I," returned Sheridan, "but now you are here, we will bring the question to a practical test, and then have a paragraph or two in the papers. Do you, Holland, go and place yourself at the back of the *upper* gallery, while I stand here on the stage and talk to you." "Certainly," said Holland, "with the greatest pleasure." A lantern was provided, with a guide, and away went the architect through a labyrinth of dark and winding passages—almost a day's journey—until he reached his distant and elevated post. "Now, Mr. Holland," cried Sheridan, "are you there, and ready?" "Yes!" was the immediate answer. "Can you hear me?" "Perfectly, perfectly, Mr. Sheridan." "Then I wish you a very good morning." So saying, Mr. Sheridan disappeared, and was a mile off before Mr. Holland could get down again. Another long interval elapsed ere the fugitive could be chased to his lair again, and the subject of accounts broached. In these days it was held somewhat gentlemanly to escape a debt; and for the failings of the individual, we, like the recording angel of Sterne, may fitly drop the tear which blots them out for ever. What, indeed, of that wit and pathos which the vulgar think opposites, but which are nearly allied: how much that is rich in poetry and graceful in diction, is called to recollection in the name of one, whose high principle and whose erroneous practice were ever at terrible conflict with each other? We are not doubtful of the merit of the modern drama; but, few are the works which now some way, do not leave us:—

> "Sighing that nature formed but one such man,
> And brake the die in moulding Sheridan."

In 1801, the concern of the theatrical proprietary had got into such hopeless difficulties, that application was made to the Lord Chancellor for protection. Sheridan pleaded in person, and accused Holland of leaving the theatre unfinished, though he had exceeded the contract. The theatre was, however, kept open.

Accounts as to the origin of the fire vary. The day, the 24th of February, 1809, was a Friday in Lent, when there was no performance. The fire was discovered about eleven o'clock at night; in ten minutes it extended from the front lobby—to which one account relates that it was at first confined—to the boxes; and in one quarter of an hour from the first discovery it had extended over the whole house. In another quarter of an hour, the Apollo at the top fell into the pit; and very soon after, the roof fell in. In about four hours from the first, the whole was destroyed. This extraordinary rapidity of destruction might afford a very useful lesson—one which was attended to in the subsequent building, more than it has been in still later theatres. There was, we should state, an unfortunate system of construction in the case of Holland's theatre. Under the idea of advantage as regards sound, the skeleton of the fabric was made more essentially a matter of carpenters' work—even than was usual at the time. The complete framework, indeed, was all finished, and stood for some considerable period before the spaces were filled with brickwork.

One story tells how that during the time of the fire, Mr. Sheridan was discovered seated in one of the taverns hard by, calmly enjoying a pint of wine. A friend discovering him, expressed surprise that he could sit there under the circumstances. Sheridan replied, "What! cannot a man take his glass of wine by his own fireside." This story in most of the lives of Sheridan is denied, and on the ground that when the news of the fire reached the House of Commons, Sheridan was there, and was able to observe, on the motion for adjournment, that "whatever might be the extent of his private calamity, he hoped it would not be suffered to interfere with the public business of the country." That it would appear quite certain that Sheridan remained at his post, and that different anecdotes are therefore disposed of, would, however, seem to be not the necessary inference, since other accounts say that the House did adjourn, many of the members at once going towards the theatre. The fire occurred five months after that at Covent Garden.

The difficulties of providing a new theatre, in the state of the finances, were of course very great. The work was, however, accomplished, and the present theatre, by B. Wyatt, architect, was commenced on the 29th of October, 1811, and opened on October 10, 1812. Extensive alterations in the auditory by the late Mr. Beazley were afterwards made; but some important features of Wyatt's structure remain, and these may demand notice in the proper place. For the present we wish to look at other works in which Holland was concerned.

Carlton House, as known to many of our readers, occupied that portion of Waterloo-place which is south of Pall-mall. The name of the original architect, in the time of Queen Anne, is not known; but the celebrated landscape gardener-architect Kent laid out the grounds when the property was in Lord Burlington's hands, between 1725 and 1732. These gardens extended along the south side of Pall-mall, and are said to have been in imitation of Pope's garden at Twickenham, with numerous bowers, grottoes, and terminal busts. Mr. Cunningham speaks of an engraving of them by Woollett. The property came into the possession of the father of George III. and being assigned as the residence of the prince—afterwards George IV.—in 1783, great alterations were made under Holland. A basement story of low rooms on the side next the park seems to have been part of the original arrangement, and therefore not due to the taste for low rooms with which the owner has been credited, but the whole of the front portion of the house is to be considered as having been renewed, and the decorations may be fairly ascribed to the period of taste we have remarked upon, and of which they must of course be deemed superior specimens. In accordance with that system of waste in expenditure on public works which prevails most in connection with royal palaces, the costly fabric under notice was of very short duration. It was taken down in 1827. The riding-house and stables, however, remain. Some architectural details may be discovered, tending to show that Holland's manner was superior to that in many contemporary buildings. The principal feature is a semicircular and conch-headed recess, intersected by an entablature; the Doric columns supporting the latter, being without bases, and fluted, but Roman in character. "Carlton Ride" is now best known as the precarious depositary of invaluable public records.

The main front of the house had a central portico and projecting ends; the walls being rusticated; and the portico being partly recessed, and partly projecting—leaving a wide intercolumn in the flank for a carriage-drive under. This very desirable arrangement however, involved an appearance of weakness, and in spite of the grouping of internal columns. That such effect is not inevitable has been shown in the case of Covent-garden theatre; but the omission of the proper base—the flight of steps—in such cases; or the substitution of blocks or dwarf wall is a change for the worse. We think, with some contrivance, convenience and effect might be both attained. The portico at Carlton House was hexastyle, and of the Corinthian order. The columns have been used again at the National Gallery, though denuded of much of the decoration. The original order had not only enriched base mouldings, but an enriched frieze. Looking at the interior, the hall was square on the plan, and on each side was an opening, or a recess, with a segmental coffered arch, enclosing two Ionic columns and entablature, the last supporting vases and chimeræ. A landing of the staircase was octagonal in plan, with well-hole and lantern-light; and the angles of the ceiling there, were formed by fan-shaped springers. One of the dining-rooms was circular, with columns and recesses, somewhat after the arrangement of those features in the Pantheon at Rome. At the opposite sides of this room were large mirrors. The general decoration of the house was of pseudo-classical character. Trophies were freely introduced; and panels, even those of doors, were enriched with lyres, wreaths, and festoons. One common introduction was that of terminal figures, used for the filling up of apertures, or for parts of furniture. These terminals were common in the style of the Adams. They may be still seen in what may have been originally shop-fronts, in Adam-street, Adelphi. From the same school, was derived the better sort of ceiling decoration in some of the rooms. Generally, the ceilings were painted to represent the sky and clouds. In the furniture, the ordinary refuge of bad taste, gilding, was used to a great extent. In many of the rooms, the furniture was entirely gilt, with crimson or crimson and black cushions. Art degenerated; but in those days, the upholsterers' business must have been a thriving one. Decoration of some kind was required—at least in palaces—and the upholsterer, not the architect, was set to do it; and he, of course, took care to use plenty of cloth—silk and velvet—in the work. In ordinary houses, as much architectural decoration as there was in Carlton House, would have been eschewed in favour of walls of plain drab colour,—not, be it remarked, on the score of saving, but because of an extraordinary apprehension of anything like decoration and colour, as indicating pretension and vulgarity. We believe a similar delusion still interferes with the growth of art. The upholsterer-decorator of the Prince Regent's time has, however, of late become much more of an artist.

The most important point for notice as to the interior of Carlton House, is the absence of the Louis Quinze style. Where the furniture had not the usual straight and stiff character, it resembled that which is known from the works and gallery of Thomas Hope, though only in some rooms was equal to that. Some of the arm-chairs have a peculiar hollow curved back. The design is, we think, known as the Carlton House chair. The Carlton House table is one with drawers round three sides of the top of the table. One of the most effective of the rooms was the crimson drawing-room. Here the backs of the chairs were curved, and the arm-chairs were indeed of very fair character. All round the upper part of the room were festoons of drapery, with folds, radiating from stars,—curtains depending both at windows and doors. The colours were, for the accessories already mentioned, crimson and gold; for the doors and chimney-pieces, black with gold mouldings and ornaments; and for the ceiling, which was banded, coved, and enriched, fawn colour and gold. In the ante-chamber leading to the throne-room, some of the arm-chairs showed a decided effort in classical character; they had straight roll-shaped arms, partly supported by sphinxes, and moulded and ribbon-banded posts as support at the back. These chairs were gilt, and had blue cushions, with long gold fringe. The panels of this room were filled with blue velvet. In other rooms, decorated as it was intended, in imitation of Indian or Japanese ornament, we have evidence of that childlike taste wherein *art* is disregarded for the sake of mere imitation,—that is to say, the taste of which the decorations of the Pavilion at Brighton were the most remarkable example. With such exceptions, we think that no pattern in mural decoration was attempted, and there is none in the pavements and carpets, frequently. Paper-hangings at that time were of inferior design and quality,—though from Professor Donaldson's investigations given in his paper read a few years since at the Institute of British Architects, it would seem that the manufacture had been during some time carried on in England. Surface decoration recently, in the interiors of ordinary houses, has been made *too prominent*, and the resulting disadvantage is increased by the disregard of principles which is all but invariable in the abundant variety of designs. In the *suite* of rooms in the basement of Carlton House, there were some things which should be mentioned. One room was called the Golden drawing-room, or Corinthian room. Here the walls were coloured pink, and the whole of the

columns and wood-work of furniture, and the cornice were gilt. An alcove was fitted with mirrors, opposite to each other. At one end of the *suite* was the Gothic dining-room. This was in wretched taste. The ceiling exhibited a surface of plain white plaster, with a range of pointed-arch-shaped ribs, cusped, laid thereon, and inverted as it were, what would be the points of springing being towards the centre of the room, at which points were suspended lights. This notable device was, however, less worthy of record than that of the conservatory at the opposite end of the *suite*. The conservatory was said to be in "imitation of a cathedral," or "Henry VII.'s chapel." In a view, the appearance of the elaborate workmanship is equally suggestive of Roslyn Chapel. The ribs of the fan-tracery were filled in with stained glass. This idea is one that might be made much of, without producing the caricature of a style. The conservatory was, we believe, designed by Mr. Hopper,—not by Holland. The Gothic furniture, about this time, was conceived under complete misconception of those principles which are amongst the most valuable contributions of the style to art,—namely, those which relate to the distinctive properties of materials. Of course, the Gothic dining-room at Carlton House—furnished, as was supposed, in admirable consistency throughout—was full of works of the mistaken character referred to. But, it was very long before what is now clear and simple, was arrived at: the Pugins even, father and son, did much that they must have afterwards regretted. The younger Pugin, indeed, in his "True Principles of Pointed Architecture," referred specially to his own designs for furniture at Windsor Castle, as exemplifying what should be avoided. He, however, had a spirit which few possess. He one day remarked to a publisher, that there were "no good books on Gothic furniture." "Why," said Mr. ——, "aren't there your own?"—which some people would think tolerably good; which, at all events, have been the foundation of the greater part of the Gothic designs during many late years. "Pooh!" said Pugin, very contemptuously, "I must *write down* those things."

That portion of Holland's building which was most noticed at the time, was the screen of columns in front. The arrangement adopted belongs to the debateable ground, whereon amateur criticism may safely venture. It is, however, very much less objectionable than the single column, used as a monument by the Romans, or the misshapen example which stands now on part of the site of Carlton House. A screen of columns affords just as much separation as is necessary; and it is fairly argued could be substituted for the common blank walls of London houses, with advantage both to their effect and to the public. At Carlton House, with the portico seen through the screen (where the first public application of the newly-invented lighting by gas was made), the effect must have been worthy of admiration in those days. But Soane, according to Mr. Tite's *résumé* of the professor's lectures, thought differently about screens; and Bonomi made the one in question the subject of an epigram, thus done into English by Prince Hoare:—

"Dear little columns, all in a row,
What *do* you do there?
Indeed, we don't know."

When Waterloo-bridge was built, some wiseacre varied this into a dialogue between the two columns, thus:—

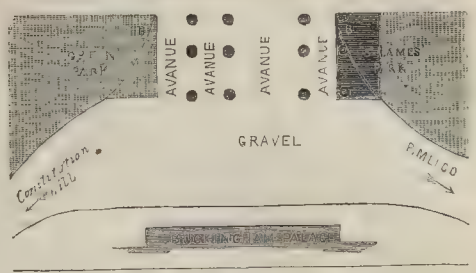
"Brother, dear! what do we here?"
(*Answer.*) "I know not; ask the engineer."

These smart sayings are not favourable to sound criticism; and perhaps we do wrong in giving them.

A similar feature had been used by Taylor, previous to this screen of Holland's, in the Bank of England,—we might perhaps say even by Soane,—not to mention Chambers's treatment of part of the river-front of Somerset House. The screen at Hyde-park-corner belongs to a later date. The columns at Carlton House were of the Ionic order, and there were archways for carriages.*

* To be continued.

PROPOSED DISMEMBERMENT OF ST. JAMES'S-PARK.



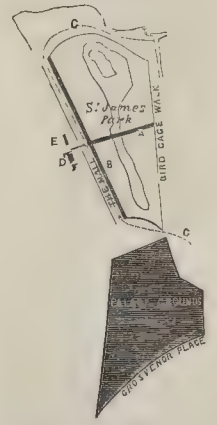


FIG. 1.

A. Proposed road. B. A green avenue at present. C. Roadway at present ready. D. St. James's Palace. E. Marlborough House.

THE ROAD THROUGH ST. JAMES'S-PARK.

FEW changes could be made in the metropolis which would give more general dissatisfaction than the cutting up of the beautiful park known as St. James's, which is the most venerable of our parks, and also the most artistic and elegant in its arrangements. It has taken upwards of 200 years to form the picturesque whole which on summer Sundays gladdens the eyes of so many thousands of Londoners. St. James's, to a large population, is a convenient park, as it closely adjoins a dense population: it is also, by its position and immediate conjunction with the town residence of the sovereign, the place most frequented by strangers.

From time to time slices of "greenery" have been taken from St. James's-park, and transformed into gravel, or in other ways covered; still, to a certain extent, the integrity of the general plan has not been materially interfered with.

Once upon a time there was painted at the entrances of our parks,—"No admittance for dogs or gentlemen's servants;" and it is only lately that soldiers in uniform were permitted to breathe the air of these places and associate with other citizens. Public opinion has caused the abolition of these restrictions; however, there are now, at certain parts of our public parks, notices still placed that cabs and other public carriages shall not be permitted to pass. The great increase of certain quarters, and, perhaps even more than that consideration, the wonderful facilities afforded by railway and other quick means of transit, have made the general masses of the population impatient of delays, and unwilling to spend in reaching a distance of less than half a mile an amount of time in which they might have been whisked nearly twenty miles: the expense is also a consideration.

The complaint, in this respect, which has attracted most remark of late, has been that referring to the road between Pimlico and Pall-mall; and many persons residing in these localities have written to the public journals suggesting that the notice respecting cabs should, like the regulation respecting the soldiers and livery servants, be repealed, and that free access should be allowed through the park gates at Pimlico, Storey's Gate, and along the Mall, and that a wider opening should be made into Pall-mall, near St. James's Palace.

The plan adjoining (fig. 1) shows a large space of firmly-gravelled road, a considerable portion of which has at different times been taken from the green part of the park. From the entrance at Pimlico, there is a spacious road, which is divided by a considerable space from the screen of Buckingham Palace. This leads to the Mall, which is divided into four noble avenues, one of extraordinary width, and each of the others broader than most of our London thoroughfares. We have here ready to hand a road equal to a great traffic, which might, by the peculiarity of the arrangement, be managed without inconvenience or confusion. We would not grumble if the curves marked by the dotted lines B B should be made.

Instead, however, of availing themselves of the means ready to hand, it would seem that the authorities have determined to cut the park in two by a road, which is to extend from the Birdcage-walk to between St. James's Palace and Marlborough House, crossing the ornamental water by means of a bridge. Many plans, perfectly ridiculous, in spite of a strongly-expressed public opinion, have been carried out, and remain, to the present day, not only an annoyance to every one of taste amongst our own community, but to astonish our friends from over the water. Yet nothing more unwise

has been proposed during the last twenty years than the idea of putting a great road through this beautiful park. We cannot find words sufficiently strong to express our feelings respecting this scheme: but we would have our sketches second the indignant remonstrance of the *Times*.

Few people will believe, notwithstanding that the posts marking the line have been fixed, that such a thing is contemplated. "But," say the parties engaged upon the work, "it will not be long before it is done."

Can it be possible that this is determined? If it be, then no time should be lost by those who feel an interest in preserving and adding to the beauty of London, to give a strong expression of their opinion on this subject. Unfortunately, we have not Parliament to appeal to; but surely it is only necessary to represent this fairly in the proper quarter, to prevent the destruction of the fine trees and general appearance of St. James's-park, which this unsightly and unnecessary alteration would cause.

It is impossible to describe the surprise of the numerous parties whom we saw collected to witness the erection of the marks. "But," said a gentleman who seemed to know something about the matter, "step this way. Look here: we are now with our backs against the railings of the palace. You see that beautiful row of trees enclosed by the railings: you see a space corresponding with the second from the centre on the other side: St. Paul's looks well in the distance, and these flowers and shrubs are pleasant to the eye. What would you think, sir, if, after the centre road is made, they should dash over this also with gravel? It is really too bad."

We have marked this part in our plan with a shadow, which we hope may not prove ominous; and in the smaller plan with a black line and the letter B.

CHURCH-BUILDING NEWS.

Roydon, Essex.—Roydon church is gradually undergoing a thorough restoration. The interior is now about to be reseated and restored under the direction of Mr. Joseph Clarke. The parish co-operate most warmly with the Rev. A. Pyne, the vicar,—just having made their third rate towards the restoration. Some curious early wall paintings exist under the plaster of the earlier part of the wall of the south aisle, and which are thought to be as early as the thirteenth century. These will be brought to light, and preserved, if practicable. The chancel will be opened into the church, and the floor raised to its original level.

Biddenden, Kent.—Biddenden church is also under restoration by Mr. Joseph Clarke, the diocesan architect. It is one of considerable interest, and contains points of beauty. The interior is to be entirely restored and reseated; the stalls in the chancel, and in Colonel Patterson's chapel, being of a richer design. The piers and arches, with the other stonework, will be restored throughout, and the floor laid with Minton's tiles. The contract has been taken by Messrs. Constable, of Pensburst.

Lincoln.—The church of St. Michael on the Mount is slowly progressing towards completion. It is in the Early Decorated style, and consists of nave and south transept, with apse chancel at the east end. The stone is Lincoln hammer-dressed, with Caen stone dressings; and the roof, which is of slate, is surmounted by crested tile ridging. On the south side nearest the west end the church is entered by a porch, on which, probably, at a future time, a tower and spire will be erected. On the north side is an entrance to a gallery, constructed to accommodate the Christ's Hospital school children; and owing to the precipitous rise of the ground, this gallery is entered at a level of about 6 feet higher than the floor of the church. The roof inside is open. The chancel is semi-octagonal, and is internally separated from the nave by an arch on carved corbels: the transept and nave are divided by two arches. Mr. Teulon is the architect, and Mr. C. Ward, of this city, the builder. The amount of the contract was 2,600*l.*; but it is calculated, says the *Lincolnshire Chronicle*, that before the completion of the church the amount expended will be a considerably larger sum.

Lynn.—At a meeting of the Lynn Town-council, as Burial Board for the borough, on Wednesday before last, the committee to whom it had been referred to receive tenders and enter into a contract for the erection of the chapels, reception-house, lodge, &c. for the new cemetery, reported that the only two tenders received were that of Mr. Bainbridge, at 1,800*l.*; and that of Mr. Stimpson, at 1,680*l.* The estimate of Messrs. Aicken and Capes, the architects, amounted to 1,550*l.*

Yarmouth.—The work of restoration at St. Nicholas's Church, here, which, during the building of the St. Peter's and the Priory National Schools was suspended, has been resumed. For several weeks workmen have been employed in the church, and the result will shortly be to remove the unsightly temporary communion-rails and reading-desk, and to provide an inner chancel suitable to the building. The altar-rails, clergy and choir seats, and reading-desk, are to be of carved oak; and the space round the altar of Minton tiles.

Hempton.—The first stone of a chapel was laid on Hempton-green, near Fakenham, Norfolk, on Friday before last. The Church Building Society, in contributing 65*l.* towards the building, authorised their architect, Mr. Hakewill, to enlarge the original design and to superintend the progress of the edifice. The present structure can only be regarded as a chancel for the chapel. The building will consist of four rough flint walls, with Caen stone dressings. The style, so far as any style can be exhibited on so small a scale, is Early English. The persons employed in the erection are—Mr. D. Forster, stone-mason; Mr. C. Tuthill, carpenter; and Mr. J. Antingham, jun. bricklayer.

Burslem. — St. Ann's Church, Brown-Edge, was reopened on Sunday in week before last. The new tower and spire, designed by Messrs. H. Ward and Son, of Hanley, is of the Norman style of twelfth century, and ornamented with carvings. The tower is square, surmounted by a rectangular spire, ornamented with ribs and shell work, and relieved by two tiers of spire lights and ornamental vane, at the apex, and is upwards of 100 feet high. There is also a staircase turret at the north-east angle of the tower, finished with spire and ornamental vane. The lower stage of the tower forms the vestry, and is connected with the church by an archway, with shafts and mouldings, all carved; and the vestry is separated from the church by a carved oak screen, surmounted with gilt ornaments placed behind the archway. All the carvings have been executed by Mr. Gladwin, of Penkhull; and the ornamental ironwork by Mr. Loton, of Cheadle. A peal of six bells, cast by Mr. Mears, of London, has been put in the tower; and all the windows will be filled with stained and ornamented glass, from the establishment of Messrs. Wailes. The chancel window, which is completed, has in the centre opening a figure of St. Anne (to whom the church is dedicated), teaching the Virgin Mary to read. The above additions and improvements have been effected at a cost of 2,250*l.* supplied by Mr. H. H. Williamson, of Greenway-bank.

Wimborne. — The foundation-stones of the chapels about to be erected in the New Burial-ground in this town were laid on Tuesday before last. The contractors, Messrs. Cottman, Eaton, and Roberts, with their workmen, fifty in number, afterwards dined at the Three Lions. The architect is Mr. R. H. Shout, of Yeovil.

Wells.—Nearly 400*l.* have been raised at Wells, for a memorial to the late Rev. Canon Barnard. It is proposed that it shall consist in the restoration of the parish church of St. Cuthbert, and that a stained glass window shall be placed in it in memory of the deceased, who was vicar of the parish. The subscription, it is anticipated, will speedily amount to 1,000*l.*

Curland. — The foundation-stone of a new church for the parish of Curland, near Taunton, was laid on Tuesday before last. The edifice, one of the smallest, perhaps, in the county, will be in the Perpendicular style, from a design by Mr. Ferrey. The contractor is Mr. H. Davis, of Taunton. There will be no tower, but a turret containing two bells. The church will be built of flint, with Ham stone dressings. Five of the windows and a door were the gift of the Rev. J. E. Lance.

Gateshead.—A new chapel has been commenced at Mount-pleasant, Gateshead, for the Wesleyan New Connection, from designs and under the superintendence of Mr. W. Thompson, of Newcastle, architect. The chapel will have open timbered roof, open seats, and stained glass windows at the west end. The style is Decorated. Mr. E. Bruce, of Gateshead, is the builder.

SOMERSETSHIRE ARCHÆOLOGICAL SOCIETY.

AT the annual meeting of this society, recently held at Dunster, Sir Walter C. Trevelyan, bart. the president referred in his opening address to the iron ore found in the neighbourhood at Treborough, which turns out to be equal to the best Silesian iron in quality, and is found in deeper and richer veins. This discovery, he said, was of great importance not only to this locality, but to the nation at large. The great value of microscopic investigation was alluded to, especially towards determining the fertilizing properties of streams by discovering the extent to which Desmidieæ and Diotomaceæ are found in the water.

The Rev. J. Warre read a paper by Mr. E. A. Freeman, M.A. on "The Priory Church of Dunster," with especial reference to the architectural distinction between merely parochial churches and those which were conventual or collegiate, and especially the peculiarities of those churches in which both purposes were united. This is a subject which Mr. Freeman has treated of in our pages and elsewhere. It was pointed out that, besides the priory and the castle, Dunster contains one or two other architectural remains of some value. The old Market-hall can indeed hardly be called in strictness a work of architecture, but its picturesque effect is about as perfect as may be. The Luttrell Arms Inn contains some portions worthy of detailed examination. There is a good perpendicular porch, on each side of which may be discerned some defensive preparations, which seem to imply the possibility of mine host—if hostelry it were from the beginning—being called upon to stand a siege upon his premises. Within are some good cinque-cento chimney-pieces and other ornamental work: there is also, in a rather out-of-the-way part, where the visitor will have to look for it, some effective, though rather coarse, perpendicular wood-work—two ranges of windows, namely, with intermediate panelling. A paper on "The Remains of Ancient British Hut-Circles on Croydon-hill," by the Rev. W. Arthur Jones, M.A. was read, and one by the Rev. Thomas Hugo, on "The Charters and other Archives of Cleeve Abbey."

On the second day the Rev. J. Warre read a long memoir of the Abbey itself. Various excursions were made, and entertainments were provided in several quarters.

STANDARD OF DEALS.

To prevent misconception as to the Petersburgh *standard* of deals, from the mode adopted in describing the contents of the *Oriental*, at the Commercial Docks (p. 388, *ante*), it may be well to say that the Petersburg standard hundred consists of 120 deals, 12 feet long, × 1½ inch × 11 inches.

In the notice in question, the quantity was reduced to planks of one inch thick, in order to give a more complete idea of the quantity contained in the vessel. It may be useful to give the following comparative view of standard hundreds in different quarters:—

Russia.—120, 12 feet, 1½ × 11, = 165 feet cube.
Battens.—120, 12 feet, 2½ × 7, = 175 feet.
Dantzig.—120, 12 feet, 1½ × 12, = 180 feet.
Norway.—120, 12 feet, 3 × 9, = 270 feet.
Sweden.—120, 14 feet, 3 × 9, = 315 feet.
Canada.—100, 12 feet, 2½ × 11, = 229 feet 2 inches.

NORWICH FINE-ART EXHIBITION.—This exhibition is now closed, and, according to the *Norfolk Chronicle*, thirty pictures have been sold, the whole amounting to 235*l.* On Tuesday week, the drawing of the Art-Union took place. There were only sixty-four subscribers. The whole amount of the prizes was 26*l.*

PARIS DURING THE GREAT EXHIBITION.

NOTES ARCHITECTURAL AND GENERAL.*

Of the palaces and museums in Paris, without doubt the first place is due to the Louvre. It would be superfluous, and indeed impossible, to describe the collection of paintings here. The grand saloon is a noble, lofty, and spacious room, rendered more strikingly so by the approaches being through saloons which, though much smaller themselves, give on first entrance an idea of great size and magnificence. It is amusing to recline on the velvet divan in the centre, and to watch the different expressions of those who enter for the first time; the upward gaze of wonder and surprise changing gradually to admiration. The long gallery, which adjoins the grand saloon, is a still more sumptuous apartment. Sumptuous is indeed the term; for, in place of the grey distempered match-boarding with which we line our national galleries, here are real marble walls and columns, mirrors, silk hangings, and velvet-covered seats. The gallery is 1,322 feet in length, broken at intervals by coupled columns, which advance and break the monotonous effect so great a length would otherwise produce. It is admirably lighted by large windows in the circular vaulted ceiling. Apparently some extension of this gallery will take place on the completion of the great works which are in progress for connecting the Louvre with the Tuileries, as a portion of this gallery is boarded off at present. Besides the collection of paintings, the Louvre contains the Musée de la Marine, consisting of models of ships of war, steamers, marine artillery, &c. and large models of the chief naval ports of France. This collection, though very interesting, is not so much visited as the rest of the Louvre. The approach is up a back stair, very likely to be overlooked by a stranger. There have been recently added to the Louvre some very interesting relics of some of the French monarchs, especially of Napoleon le Grand: these are contained in the Salon des Rois, and the Salon Napoleon I. But next to the paintings, the most important collection is the Musée des Antiquités, which is in many respects analagous to the sculpture galleries of the British Museum. Here are besides a large collection of Egyptian and Assyrian sculptures, some of the most famous antique statues,—the gladiator Germanicus, Diana à la Biche, and above all the exquisite Venus of Milo,—a statue I believe to be in every way far finer than the Florentine Venus. I allotted the only Sunday I was in Paris to Versailles: it happened to be one of the few days on which the grand fountains play. I left Paris at nine in the morning, by the railway on the right bank, accompanied by two young Englishmen. We breakfasted at Versailles, and about eleven, following the constant stream of people tending in the same direction, arrived at the palace, and in five hours had passed through the rooms, resting in none, and being continually on the move. I retained little more than the feeling that I had seen a great many big pictures of battles, had escaped some dangerous falls on the slippery floors, and was suffering from heat and thirst. It is true I saw also the private apartments of Louis XIV. and the chapel, but as these are shown only to a few people at a time, accompanied by a guide, I had not time to make any remarks. By this time the *grands eaux* were playing in full force, and, together with the accessories of an immense concourse of people, of whom a part only were French, military music, and a bright burning sun, formed a most charming scene.

Besides the national collection at the Louvre, there are the pictures of modern French artists at the Luxembourg Palace. One of the most remarkable of these is a large unfinished work by David, of the heroes of the first Revolution, showing the careful manner in which that painter wrought, the figures being elaborately painted nude studies, intended of course to be finished in the costume of the time. At present many of the pictures are removed to the Palais de l'Industrie. The state apartments at the Luxembourg are gorgeous to excess; indeed, there is great sameness in the decoration of the French palaces, as far as I have seen,—gilding and carving, and mirrors—*da capo al finale* The Salle des Sénateurs, a semi-circular chamber, with the president's chair and tribune in the middle of the chord, and the seats and desks arranged in concentric curves, seems better adapted to its purpose than our rectangular legislative halls.

Not far from the Luxembourg is the Hôtel de Cluny, a building of the latter end of the fifteenth century, in a good state of preservation, and, externally at least, not as yet subjected to the process of restoration. Doubly interesting, as the sole remaining civil edifice of its epoch in Paris, it has been made the receptacle of the collection of mediæval art commenced by the late M. Du Sommerard, and destined to form a museum of national antiquities. Adjoining the hotel are the remains of an ancient Roman frigidarium, supposed to have been part of the palace of the Cæsars, and forming the only vestige of Roman Paris. The collection of mediæval sculpture, carving, iron, and gold and silver work, pottery, glass, and painted windows, is extensive and valuable, and, together with the building itself, affords a fund of suggestive matter for the student of mediæval architectural detail.

Another collection which is well worth seeing I visited during my stay, viz. the Conservatoire des Arts et Métiers. It contains, besides a very extensive collection of machinery and models, about 20,000 drawings of machinery, accessible at all times to the public.

Of the numerous magnificent churches of Paris of all periods, I find notes of the following in my diary:—S. Eustache, a very early specimen of the Renaissance style, the Gothic arrangement and construction being strictly adhered to; but the long slender shafts which would cluster round the piers of a Gothic building, are here replaced by small classic columns, each with a fragment of entablature, piled over each other. In spite of these incongruities, the effect of the interior is good. The windows are traceried, but in a style of great poverty. There are some fine pictures, and a polychromic decoration of the interior is now going on.

I was a good deal disappointed with the abbey church of S. Denis, neither the size nor the splendour of the building coming up to my expectations. Restorations of so complete a nature are in progress, that much of the historical and archæological interest is lost, and monuments are shown as of the twelfth and thirteenth centuries, which from their fresh and perfect appearance have very much the look of forgeries. It is the same with the painted glass. The thirteenth-century glass in the aisles of the choir has been completely repaired, and though on close inspection it is easy to distinguish the old fragments from the new patchings, the effect cannot be the same. Of modern stained glass there is plenty, from the dark age of 1820—30, to the present day, forming an interesting illustration of the progress of the art in its revival, and the gradual recovery of the true principles. One can hardly conceive how such abominations as some of the side transept windows are, could have been perpetrated in any age.

The celebrated tomb of Louis XII. is badly placed, being in a dark side-chapel, and screened off. Under an architectural canopy are placed the effigies of the dead king and his living wife, Marie, sister to Henry VIII. Of the merit of these figures I can give no opinion, as it is impossible to see more than the soles of their bare feet. On the summit of the tomb the figures of the king and queen are repeated in their royal robes, kneeling in prayer. In the twelve arched openings which surround the recumbent figures are the twelve apostles, and a sculptured plinth supports the whole. The ornamental details are very fine, and are, I believe, adopted as standard examples of the Renaissance style in our schools of design; but I think as a composition, the tomb is nothing remarkable, and the small figures of the apostles give an air of meanness to the whole, which is altogether on a smaller scale than I supposed from the views I had seen.

The tombs in the crypt are interesting, but visitors are hurried round by a sacristan in the true Westminster Abbey style; and, by the way, I trust that our historical monuments in the Abbey will never be restored in the perfect manner in which those of S. Denis are.

The church of the Madeleine is one of the glories of Paris. The interior is, of its sort, the most perfect that I have ever seen. It declares itself as a church and nothing but a church, which is not the case with S. Geneviève, the other great classic church of Paris. Perhaps the antecedents of this latter have some influence upon the visitor, and it has the bare empty look of our St. Paul's without its magnificence or size.

The Sainte Chapelle, the restorations of which are nearly complete, is freely open to the public at present. It is a gorgeous specimen of the powers of decorative art. I look upon it, however, more as a *tour de force* than as an example to be admired for its good taste. As a restoration it has the usual objection: not a particle of the old work is or can be seen, the proportions only of the original building remaining. The very profusion of ornament, too, defeats its purpose, and the want of a portion of plain surface as a repose to the eye is painfully apparent.

From La Sainte Chapelle I went to see Notre Dame. The interior looked cold and bare after the rich colouring of the former. The effect of the second range of lofty arches which takes the place of the triforium is certainly to lower the apparent height of the church; and this, together with the want of length, renders the interior less effective than that of our abbey at Westminster; but externally there can be no comparison. Notre Dame is magnificent, the radiating flying buttresses of the apsis, the elegance of the window tracery, and the beauty of the towers, especially under the influence of a bright afternoon sun, combine to form a whole to which nothing could be added without injury.

The new Church of S. Clotilde, near the Luxembourg (see *Builder*, vol. xii. p. 602), is now nearly complete. Though possessing many good points, I do not think it is altogether satisfactory for the second half of the nineteenth century. The towers and spires are mean, much frittered away, and want height. I do not think the French architects have as yet caught the spirit of Gothic architecture to nearly the same extent that our own have, although as restorers they are unequalled.

The very beautiful tower of S. Jacque de la Boucherie, now open to the new Rue de Rivoli, is being very carefully and completely repaired, and will form a striking feature in its new position.

The grand effect of the street architecture of Paris, arising from the immense height of the houses, is very striking to a Londoner, who rarely sees three stories exceeded. The new buildings in the extension of the Rue de Rivoli are quite palatial, and, unlike our new streets, are constructed of stone, and not brickbats cemented over. The balconies (of which there are two, one above the *entre-sol*, and a second formed by a bold projecting cornice to the fourth story) are gilt, which mode is probably as durable as paint in the pure air of Paris, and adds much to the gaiety of the general effect of the new street.

Nothing can be more admirable than the arrangements for cleaning and watching the streets; and as for the river it is quite delightful to see the pure pellucid pale green water falling over the weir just above the Pont des Arts. How the sewerage is managed I do not know, but certainly it is effected without polluting the Seine.

It is probable that even were the sewerage of London diverted from the Thames the constant traffic of steamers would render the water turbid in some degree, but we should escape the noxious exhalations continually arising. However, even the Thames is nothing compared to the Liffy, which at low water is but an open sewer of the foulest kind.

I was much pleased with some newly-erected villas and cottages ornés which I saw at Passy and Auteuil, in which a highly picturesque effect was produced by the employment of black and red brick and stone without any elaborate decoration. Some of these were in the Late Domestic French Gothic style—a style peculiarly adapted, I think, for modern residences, and of which there are numerous specimens

* See p. 416, *ante*.

existing in good preservation. Its adoption and introduction to this country would give one more element for those new combinations of known forms which must henceforth in architecture take the place of originality. I saw a great deal of painted glass, new, old, good, bad, and indifferent. Much of the modern French glass is painfully glaring, and in nearly all there is a great preponderance of the primary colours; the modern glass in the thirteenth century style being peculiarly liable to this error, as may be seen at S. Denis, Notre Dame, and La Sainte Chapelle. The large figure subjects in some of the churches—S. Germain de l'Auxerois, for instance—are positively painful to the eyes, from the large unbroken masses of ruby and yellow glass in the draperies. The semi-circular allegories at each end of the Palais de l'Industrie are not painted windows at all, but pictures on glass, and would have been much better if painted on an opaque wall. After all, I saw no glass that I thought so good as Hardman's, in Westminster-hall; and I am much disposed to think, that flat ornament and heraldry are the only proper subjects for stained glass.

D. W. R.

SOME MEMORIALS OF FATHER THAMES.*

FOR many centuries Old London-bridge was the only structure which was passed across the bosom of Father Thames. Various ferries, such as those at Lambeth and Blackfriars, were the only other means of transit.† From as far back as the reign of Queen Elizabeth, the necessity for a bridge from Westminster into Surrey seems to have been strongly felt by the inhabitants of that district. The measure was, however, vigorously opposed by citizens, "who," says John Sanders, in Knight's "London," "felt that the very existence of the trade and welfare of London depended upon keeping Westminster without a bridge." The same opposition was made to the erection of the Putney, Battersea, and Vauxhall bridges.

On April 4th, 1671, a Bill for building a bridge at Putney was brought before the Parliament. On this occasion, Mr. Jones, the member for London, was examined, who said,—"This Bill will question the very existence of London. *Next to the pulling down of the borough of Southwark, nothing can ruin it more.*"

Mr. Waller, the poet, was, however, of a different opinion; for he says,—"As for the imposition laid by this Bill, men may go by water if they please, and not over the bridge, and so pay nothing. If ill for Southwark, it is good for the end of the town where court and Parliament are. At Paris there are many bridges, and at Venice hundreds. *We are still obstructing public things.*"

The Lord Mayor of London was strongly against new bridges, himself and others stating a belief that new bridges would be the means of causing shoals in the river, and by carrying off the population in various angles, do no end of damage, and create the greatest confusion. Little did these gentlemen foresee that, notwithstanding the erection of numerous bridges, the great difficulty with London-bridge now is, how to provide facilities for the immense increase of the traffic. This Bill was thrown out at the time mentioned, by 67 to 54: that bridge, however, as well as Battersea, was eventually erected, the latter by a company, the members of which each subscribed a sum of 1,500*l.* After the greatest opposition, the Parliament was prevailed upon in March 1736, by a vote of 117 to 12, to sanction the erection of a bridge at Westminster also; and it is worthy of remark, that Father Thames, either for the purpose of reproving them for their long delay, or it may be by way of caution, to give a word of advice, or for some other cause, exceeded his ordinary bounds, and marched up to Westminster-hall, where he was a foot deep amongst the legs of the legislators and council. Labelye was appointed the architect of Westminster-bridge, which was intended in the first instance to have consisted of piers only, which were to be crossed by galleries of woodwork. The architect was most anxious for arches, and a severe frost, followed by a flood, having done much damage on the Thames, and severely tested the works of the new bridge, Labelye was permitted to follow out his own plan. In excavating the foundation for the second pier, a copper medal was found, with the head of the Emperor Domitian on one side, and a woman with a pair of scales and a cornucopia on the other. Some have supposed on this slight circumstance that at this point there had been formerly a Roman ferry.

In a short time the oldest of the bridges immediately connected with the metropolis will be removed; it is, therefore, interesting to note the following particulars respecting an almost superannuated public servant.

The first stone of Westminster-bridge was laid in January 1739, and occupied eleven years and nine months building. It was opened at twelve o'clock at night, of 17th November, 1750. The reason for opening the bridge at this unseasonable hour seems to have been, that a day was appointed for the opening which proved to be Sunday; the opening, therefore, took place at night in order that as little attention as possible might be directed to the blunder.

Its extent from wharf to wharf, is 1,223 feet; above 300 feet more than the Thames at London-bridge. The free water-way under the arches of Westminster-bridge, is 870 feet, which is more than four times the extent of water-way left between the sterlings of Old London-bridge.

The value of 40,000*l.* is computed to be always under water, in stone and other materials. The caisson on which the first pier was built contained 150 loads of timber.

The depths or heights of every pier are different, but none of them have their foundations laid at a less depth than 5 feet under the bed of the river, and none at a greater depth than 14 feet under the bed.

Notwithstanding all the precautions which were taken, in 1747 one of the piers sank and damaged the arch to which it belonged so much that the commissioners gave directions for pulling it down, when by laying 700 tons of cannon on the lower part of the pier the foundation was supposed to have settled and set to rights.

The charge of building this bridge from the beginning to the finishing, and for procuring the several conveniences requisite, amounted to the sum of 389,500*l.*; whereof 197,500*l.* was raised by several successive lotteries, and the remainder, being 192,000*l.* was granted by Parliament.

The original cost of this bridge, together with the sums required at various times for extensive repairs, shows that a large sum per annum has been paid during the years it has been in existence. Some time since, while repairing Westminster-bridge, on the removal of the ground within the sheet piling, the projecting part of the timber bottom of the caisson was found to have been broken and separated from that part underneath the pier. This had arisen from the space intended for the caisson not having been sufficiently dredged to receive it, so that it was resting on the slope of the excavation, the centre part being hollow, until the weight of the masonry broke away the sides, and allowed the pier to settle on loose sand and gravel, which ran under it. This will in some measure account for the settling of the bridge in the first instance.

Westminster-bridge had not long been finished when it was proposed to build another bridge over the Thames at Blackfriars. In December, 1755, the subject of building the new bridge was debated in the Common Council, and was agreed to by a majority of 100 to 65; and early in the following year an Act of Parliament was passed to carry the building of the said bridge into effect. This enactment, after appointing a committee to undertake the erection and maintenance of the bridge, provides, "that there shall remain a free and open passage for the water through the arches or passages under the same of 750 feet at least, within the present banks of the river; that the navigation thereof may receive no prejudice, no building besides the proper gates or toll-houses to be built upon the said bridge," &c. After providing for the improvement of the approaches in the neighbourhood of the bridge (the particulars of which we have given at some length in the article on "The Houses and Shops of old London," published in the *Builder* some years since), it was enacted that the channel of Bridewell-dock and the Fleet-bridge should be filled up, and also the bridge over the same taken down, and proper sewers, &c. made. The mayor was empowered to raise a sum not exceeding 30,000*l.* a year, until 160,000*l.* be raised on the whole. A heavy tax was to be paid on carriages, &c.; and for every foot passenger on Sunday one penny, and on every other day one half-penny. Robert Mylne, at the time not more than twenty-five years of age, was appointed architect; and in October, 1760, the foundation-stone was laid by the Lord Mayor, the first pile having been driven in the middle of the river a few months previously. There was no lack of plans for this bridge,—Smeaton and other eminent men competing with the youthful architect. Dr. Johnson at the time entered at some length into the discussion respecting the advantages of the semi-circular and elliptic arches. Mylne completed the bridge to the general satisfaction in 1766; and it is worthy of remark that the bridge and approaches cost 300,000*l.* The architect said that the bridge should not cost more than 153,000*l.*; the whole was completed for 152,840*l.* 3s. 11d. Mylne had agreed to superintend the erection of the bridge at a fixed salary of 300*l.* a year, and a premium on the completion of the works of 5 per cent.; and it is painful to learn that the architect was obliged to resort to legal proceedings before his just claims were recognised.

Southwark-bridge was next built, at a cost of 800,000*l.* Then Waterloo-bridge, which was most violently opposed by the City throughout three sessions of Parliament. The opposition, however, was only a means of strengthening the funds of the Strand-bridge Company, as it was called; and eventually the beautiful and substantial bridge was, under the direction of Rennie, put across Father Thames, at a cost of upwards of a million sterling.

Since then we have had another bridge put over, at the old Hungerford, and we believe that more may be properly erected without opposition from the City.

The damage done by the inundations of the Thames, which undoubtedly was, in a great measure, caused by the obstruction of old London-bridge, must have been enormous, following one after another in rapid succession.

In January, 1762, storms of wind and rain, the Thames rose high and overflowed Millbank, Westminster, &c.

On the 13th of February, 1763, the Thames rose so high, that many houses on the Surrey side were four or five feet under water. The long walk at Lambeth, by the bishop's palace, was overflowed, and boats were employed in the town to carry people from house to house. The damage done by this high tide was estimated at 20,000*l.* In Westminster-hall the water was four feet deep; and the inhabitants of Tooley-street and Wapping were obliged to keep to their upper rooms.

1764.—September: A very high tide, doing much damage.

1767.—After a severe frost: A hurricane and flood in the Thames, doing damage to the extent of 50,000*l.* at the least.

1768.—April: A great flood.

1768.—On the first of July a storm of thunder and lightning passed over London and the neighbourhood; the lightning destroyed several houses, and caused some loss of life. Chamberlain says: "By this storm, the water of the river Thames was so driven out of its channel above bridge, as had never been remembered by the oldest man living, one-half of the bed of the river remaining uncovered for two tides." It appears that this storm raged with the greatest violence on the south side of the river.

On the first of September, of the same year, a heavy rain fell at London and the country round. It began in the evening, and in a few hours the waters poured down High-gate-hill with such violence, that the sewers were not

* See p. 410, *ante*.

† In addition to the ferries, there were in olden time, as we have already hinted, several fords across the Thames. Maitland discovered that the greatest marshes on the south side of the river Thames reached from Wandsworth in the west to Woolwich in the east. "Then," says he, "sounding the said river at several neap tides, from the first of these places to London-bridge, I discovered a ford about 90 feet west of the south angle of Chelsea College-gardens, whose channel in a right line from north east to south-west was no more than 4 feet and 7 inches deep, when the day before my waterman assured me that the water then was above a foot lower, and it is probable that at such tides, before the course of the river was obstructed either by banks or bridge, it must have been considerably lower."

able to carry off the torrent. The adjacent houses were filled almost to the first floors, and as it happened in the night, many were awakened from their sleep in the greatest consternation. The Serpentine, in Hyde-park, rose so high, that it burst its banks, and poured with violence on Knightsbridge. The water in St. James's-park rose higher than it had been known; in fact, the chroniclers say that in the memory of no man living had so much rain fallen in so short a time. About Bagnigge-wells, the water rose 8 feet perpendicular height, though the rain did not continue to fall with violence more than eight hours. In Cold Bath-fields, Mutton-lane, Peter-street, &c. much damage was done; casks of beer, &c. some oxen and hogs, were carried away, and in Mutton-lane, and the lower part of Hockley-in-the-Hole, the inhabitants were obliged to quit their ground-floors, and go up-stairs, for fear of being drowned. The water in St. James's-park swelled so high, that it flowed up to the garden wall of the Treasury, and was so deep that foot passengers could not pass. In Westminster, great damage was done. In the river, many vessels, &c. were sunk, and lives lost, and the Duke of Cumberland's water-works, in Windsor Forest, were entirely destroyed.

The above damage, which is but a part of that caused by the flood of the Thames in a period of only six years, will give some idea of the cost of these regular inundations, and show us that in this respect, the river has been improved by the course of management pursued. It will also be found that the channel at Chelsea, Battersea, London-bridge, &c. has been deepened, and the most eminent of our engineers are of opinion that Father Thames will be still more improved by the erection of substantial quays along his banks.

PROVINCIAL NEWS.

Colchester.—The erection of new barracks on the Ordnance-field, near Colchester, for 3,000 militia, is progressing. The contractors are Messrs. Lucas, Brothers, of London. The buildings will form six rows of huts, intersected by six carriage-ways. In each of the soldiers' huts, which are 38 feet long by 20 feet wide, there will be an entrance at either end; and each will contain ten windows. Those to be occupied by the officers will be divided into four compartments, each with a separate entrance, thus giving a distinct lodging-place to each officer. There will also be officers' mess establishments, stables, servants' rooms, barrack stores, armourers'-shops, coal-yard, &c. The cooking-houses (every sixth erection) will be formed of iron, to prevent the spread of fire. Water is procured from twenty-four wells, each 50 feet in depth, and there will be an efficient system of drainage for the entire encampment. Twenty-four hospital-huts are being raised with a covered way between them, and rooms for a medical staff. There will also be three school-rooms, each 50 feet by 20 feet, and a church for about 800 persons. Forty vessels have been employed in conveying the materials, and upwards of 300 men have been engaged fourteen hours per day in fitting.

Harrow.—The new class-rooms here, according to the *Harrow Gazette*, will soon be completed. The building somewhat resembles the old school, before it was enlarged, some forty years ago. It is in the Tudor style, from a design by Mr. F. Barnes, of Ipswich, and is executed entirely with red bricks. The accommodation consists of six class-rooms, each 24 feet square and 14 feet high, approached by a staircase three stories in height, which forms the centre portion of the west front, and in which are three separate entrances to the three stories. The principal entrance doorway is 12 feet high and 6 feet wide, in the centre of the building, and there are two side doors under open arcades to the north and south. The plan occupies an area of 52 feet by 45 feet, and the height is 65 feet from the ground to the top of the finials.

Dover.—At a recent meeting of the local Board of Health here, a discussion arose respecting the compensation expected by Mr. Rimmell, the chief engineer of the sanitary works, for his services. At a recent special meeting of the committee, Mr. Rimmell had stated that he should look for a commission of 5 per cent. which, upon an outlay of about 70,000*l.* would amount to 3,500*l.* besides travelling expenses. This Mr. Alderman Birch regarded as a monstrous sum, payment of which he would strenuously oppose. Mr. Alderman Chalk, on the other hand, asserted that the Board had always understood that Mr. Rimmell would demand that per-centage as his remuneration. No motion was made on the subject.

Southampton.—A military hospital, on a scale befitting our army establishment, is about to be built on the banks of the Southampton Water, on a site of about sixty acres of land close by the domain of Lord Hardwicke, at the entrance of the Southampton Water, and within easy water distance of Portsmouth.

Kidderminster.—The schoolmaster's residence, which stood adjacent to St. George's Schools here, has been pulled down to make room for a more commodious and ornamental building, to be used for a like purpose. At the same time two class-rooms will be added to the schools. The house will be constructed of brick, with stone windows and dressings The new building will have two stories only, but so high that the new will have an altitude little less than that of its predecessor. The cost of the new building, including the class-rooms, which will be one over the other, each communicating with a separate school-room, will be about 564*l.*

Wells.—It is proposed to place a stained glass window in St. Cuthbert's Church, in memory of the late Canon Barnard.

Bristol.—The plans for the new Orphan Asylum, Ashley-road, having been completed by Messrs. Foster and Wood, architects; Mr. Benjamin Farmer, the contractor, who is at present engaged on the New Bank, on the Exchange here, has been selected as the builder, and has commenced operations. The asylum is intended to accommodate upwards of 300 orphans, and will form another example of the extraordinary efforts of Mr. Müller, to which we have already alluded.——The first stage of five bays of the new West of England Bank is now nearly completed. The spandrils of the doors and windows are filled with carved allegorical figures by Mr. John Thomas. —— The Bath-bridge has been opened for traffic.

Wellington.—The new National School buildings lately completed here by Messrs. Dickson and Co. are situated on rising ground, to the north of the town, the site being the gift of the vicar. They are of old English style, and consist of a central part, containing the infant school and class-rooms, and a dwelling-place for the master above, with two wings, one containing the boys' and the other the girls' school. The whole is surmounted by a pinnacled bell tower, and an octagonal turret. The schools occupy an area of 1,452 square feet each. The infant school, in the centre of the building, contains an area of 960 square feet. The boys' school, contains 170 pupils; the girls' school, 100; and the infants', 80. The total cost of the building was about 1,800*l.*

Yeovil.—Mr. Thomas Harwood, of this town, builder, is employed to erect the new station here, for the Wilts, Somerset, and Weymouth line.——The new Wilts and Dorset Bank, built by Messrs. Brown and Son, and Mr. Chant, of this town, builder, is nearly completed.

Newport (Wales).—The Silurian lodge of Freemasons, Newport, having determined to erect a new building for the accommodation of their lodge, Wednesday before last was appointed for the purpose, and much Masonic ceremonial was observed throughout the proceedings. The edifice will be erected in Dock-street, opposite the Eastern and Western Valleys railway termini. Mr. R. G. Thomas is the architect. It is estimated, says a local paper, that the cost of the building will be about 17,000*l.*

Birmingham.—The offer by Mr. C. B. Adderley, M.P. of ten acres of land at Saltley, for a public park for the people of Birmingham, having been declined, owing to some misconception as to the terms, the hon. member, in a letter to the General Purposes Committee, says; —"I should regret that the public should be deprived of an expected place for recreation by the offer having failed: I will, therefore, myself set apart the same space of ground in the proposed quarter for the public; and, as it appears (objection having been made to a fence) that the committee had no intention of ornamenting the proposed park, such a piece of ground will serve as well all the purposes of a playground for all classes of people."

Leigh, Lancashire. — On Monday, August 27th, a meeting of the Burial Board for the parishes of Astley, Bedford, Pennington, and Westleigh was held at the office of the clerk, Avenue-place. The following tenders for the erection of the three chapels, lodges, boundary-wall, &c. or portions of such works, were then opened and read:—

	Chapels, &c.	Boundary Wall.	Total
	£.	£.	£.
W. and R. Burrows, Bolton	2,470		
Thomas Stone, Newton	2,363	859	3,222
Farrell, Brownbill, and Co. Manchester	2,121	1,070	3,191
Thomas Tully, Manchester	2,300	840	3,180
William Boardman, Leigh	2,215		
Mellor, Son, and Terris, Manchester	2,190	860	3,050
Robert Neill, Manchester	2,185	810	3,0
S. Dennison, New Ferry, Cheshire	...	...	2,99

Sigley and Shaweross, Manchester	...	825	

Mr. Penk's tender was accepted. Mr. Bird, of Manchester, is the architect.

Sunderland.—The works of the extension at the South Docks are expected to be finished before the close of October. The junction of the great sea entrance with the old and new works can now be traced. There are upwards of 800 workmen in full employment, and night as well as day labour is carried on.

Newcastle-upon-Tyne.—The foundation-stone of the new corporate buildings in St. Nicholas-square, was laid on Wednesday in last week, with due ceremonial. The architects whose plans have been adopted are Messrs. Johnstone and Knowles, of Newcastle. The style is Roman, the principal order being Corinthian. The ground-floor consists of shops and a corn-market. The music-hall over the market will accommodate 4,000 people; and the remaining portion of this floor is to be devoted to corporate uses, while, on the floor above, there will be other rooms and offices. The contract taken by Mr. Robson, according to the *Gateshead Observer*, does not cover the domed turrets, nor the northern end of the edifice, planned and lithographed by Messrs. Johnstone and Knowles. The area measures about 3,000 square yards.

Wigan.—Some time ago, notices were served upon owners of land required by the Wigan corporation for their waterworks. One owner, the late Mr. James Cardwell, of Ellerbeck, claimed 5,500*l.* The case was referred to Mr. Powell, of the Board of Trade, for arbitration; who, after hearing counsel on both sides, awarded 1,850*l.*

Berwick.—The Burial Board of Berwick have made an agreement with the corporation for the purchase of five acres of the Inner Cow Close, adjoining the Ayton turnpike-road, for a burial-ground, at a cost of 1,000*l.* Having offered a premium of 15*l.* for the best design for chapels, &c. they have awarded the same to Mr. Robert James Johnson, architect, of Newcastle, and his plans are to be immediately proceeded with.

Brechin. — The local *Advertiser* states, that the extensive additions and alterations at Panmure House, which have been nearly three years in active progress, are drawing towards completion. The whole has been roofed in. In approaching it from the east, a frontage of nearly 500 feet in length, with an entrance hall between two octagon towers, present themselves, while every corner of the main building in view is supported by square towers, rising to a height of about 90 feet, and surmounted by the principal tower, rising nearly 120 feet. From the west similar towers are brought into view, with an oriel window reaching the whole height of the building. Here a double stair leads up to a balcony which extends a considerable length along the front, and terminates at each end by meeting two towers which jut out from the building. Some of the stones here are in pieces about 15 feet long by 7 broad. The

principal windows are overhung with pediments and cut devices, and there are mouldings and cornices throughout the work. Extensive terrace walks are being formed in the grounds around the house. They consist of close-built walls, overtopped with an open balustrade and cope of polished stone. The grounds around are in an advanced state, under the direction of Mr. France. Still it will require great exertion to have everything fit for a visit from royalty next autumn. Br. Bryce is the architect; Mr. Nicol, the contractor. Under the superintendence of Mr. M'Intosh, garden architect, the garden at Panmure has been laid out in keeping with the features of the other parts of the grounds, with terraces, corridors, hothouses, conservatory, peach houses, vineries, gardeners' house with reading-room swimming bath-room, &c. Each lodge has four rooms, besides coal house, scullery, washing-house, and other conveniences. To the west, the romantic glen of Curyara has been spanned, a little below the Linn, by a bridge of three arches, and a new drive formed to the "Live and let Live" testimonial on Cambuston-hill. There has also been erected a factor's house, a forester's house, a gas work, and workmen's houses. Mr. Morrison, who is also employed at Kinnaird Castle, is contractor for the mason work.

Inverness.—The iron suspension-bridge across the Ness, just erected, is now open for traffic. The span is 225 feet.

SECOND REPORT OF THE DEPARTMENT OF SCIENCE AND ART.

THE Second Report of the Department of Science and Art, which has just appeared, commences by stating that it has been found expedient to make some alterations in the organization of the staff of the department, the chief of which is the separation of the duties of secretary and inspector, which were jointly carried out by Dr. Playfair and Mr. Cole, and which arrangement was found inconvenient. Henceforth Mr. Cole will act as inspector-general, Dr. Playfair assuming the office of sole secretary. The report, after noticing some alterations in the mode of producing and supplying the examples required in the schools, then proceeds to give an account of the readjustment of the parliamentary grants to schools of design, which, from the year 1848, had been entirely placed in the hands and under the control of the local committees. This so-called readjustment resulted in virtually withdrawing the grants, not only from local control and management, but from the schools themselves, and was the subject of some very strong remonstrances from the local committees of Manchester, Macclesfield, Sheffield, Dublin, Belfast, Cork, and Limerick. In reply to the objections, it was stated that schools of art had been established and maintained in towns far less wealthy than those referred to.

Manchester eventually agreed to give the new system a fair trial for one year, and in most of the other schools in opposition a like feeling has manifested itself. At Birmingham the influence of the school has been largely extended, and the local funds are in a favourable state, according to a report on its reorganization, drawn up by the head-master, Mr. Wallis. Thus the report states—Birmingham signally illustrates the success of the improved system. At Leeds the school is no longer in receipt of any State assistance, as the master receives only his certificate allowance, and depends upon the students' fees for his remuneration. At Coventry, Stourbridge, and York, similar changes have been effected. At Belfast, on the contrary, an opposite view has been taken, and on the transference of the master to Norwich, the committee declined to accept a master from the training class, and the school has remained closed. At Cork it was agreed that the master should be withdrawn and another recommended, but local difficulties have arisen which have caused the school to remain closed. The report then proceeds to explain the system under which future schools of design will be established. This consists in providing an augmentation allowance of 10*l.* to 50*l.* according to qualifications, and guaranteeing for one year an income of 70*l.* including the fixed allowance. Twenty-six schools in all have been established on this plan. From data supplied from fourteen of these schools, it appears that 1·1 per cent. of the population avail themselves of them, whereas the nineteen schools on the old system instruct but 60 per cent. of the population. The aid to the salaries of the masters of the fourteen new schools for the year ending 30th June, 1854, was only 155*l.* 19s. 2d. while the nineteen old schools cost in salaries during the same period, 4,683*l.* 16s. 7d. and in other aid, 1,158*l.* 1s. 7d. The report next touches upon the subject of local schools of science, in which it is impossible to form an opinion as to the applicability of the new system, as only one or two schools are as yet established. A school of science has been commenced at Birmingham, in which the students receive instruction in physics, chemistry, and physiology. Another has been opened in Aberdeen.

The report, after speaking of the School of Science, in Jermyn-street, gives a full account of the Central School of Art at Marlborough-house, which is maintained to be self-supporting as far as it is a general school of art, the excess of its expenditure over its receipts being due entirely to the class for training young men as masters for local schools of art.

The last section of the report is devoted to the institutions or services in connection with the department. These are the Geological Survey of the United Kingdom, the Mining Record Office, the Meteorological Inquiry of the Board of Trade, the Registration of Designs, the Royal Dublin Society, the Paris Exhibition.

The appendices contain much valuable information, not a little entangled with "red tape," of which the department appears to have at least the average stock supposed essential to public offices.

BELLE-ISLE FACTORIES.

IN reply to Mr. Fache's letter on this subject (p. 399, *ante*), we have received a communication, signed "William Naylor," and enclosing a report made by himself and Mr. Rae, of Wardour-street, after visiting the houses, to the effect "that the health of the inhabitants of Belle Isle is exceedingly good;" and pointing out that the person who jeered at complaints referred to in our preceding remarks was not attacked by cholera there, but in another part of the country, an intimation that in no way interferes with our statement.

The number of inhabitants, according to Mr. Naylor's report, is very small, so that, except during the prevalence of pestilence, deaths would seem rare. The statements as to the extent of the evil caused to the adjoining parts by the nuisances here congregated are incontrovertible. If a house-to-house visitation were made, the statements already deposed to by the medical men would, we have no doubt, be fully borne out.

Notices of Books.

The Phasis of Matter; being an Outline of the Discoveries and Applications of Modern Chemistry. By T. L. KEMP, M.D. In two volumes. Longman and Co. London: 1855.

THE purpose of this work is to supply to the general scholar and the man of the world a competent knowledge of chemistry, such as the smaller and more elementary works do not provide, and such as the larger and more technical and comprehensive works are neither intended to give nor likely to be referred to for by the general reader.

In many respects the work is well adapted to its purpose, and perhaps not the less so that its author is not a professional chemist himself. It comprises a general view, not only of the elements and compounds of mineral chemistry, but of those multifarious combinations which constitute the ever progressing science of organic chemistry, and also the essential principles of the chemistry of geology and other phases of matter.

Although, in a work such as this, there are some discoveries to which the author may be excused for not alluding, there are others which certainly ought not to have been omitted, but of which we can find no trace. Thus, for example, it was discovered a few years since that phosphorus was capable of assuming two distinct forms, *per se*, one the usual and well-known aspect of clear white or yellowish wax, shining in darkness, and exceedingly combustible and dangerous in handling and in transport, whence many accidents had arisen; the other, a new and amorphous form, in which this dangerous but valuable combustible could be packed in wooden barrels in even the most careless manner, or just as the incombustible red oxide of iron or many other like substances can; or even be carried about with comparative safety in the waistcoat pocket; and this, too, although still possessing all the chemical possibilities of its nature, and although these are not placed in abeyance by any addition, such as that of oxygen, to neutralise these properties, but are only disguised and made dormant by the assumption of a new form. Now a discovery such as this ought certainly to have been recorded, however briefly, even in a work such as the present; yet it does not appear to be so, although the old idea as to the red amorphous matter that it consisted of a protoxide of phosphorus is alluded to.

In like manner, not a word seems to be said as to the singular discovery of a malleable, silvery, and useful metal in alumine or common clay. The old idea of aluminium that it was "a gray powder, the scales of which have a metallic lustre," is duly noted; but the only approximation to M. St. Clair Deville's important discovery, and that but a distant approximation, is the account given (in itself not new), that magnesia, a substance analogous to alumina, or alumine, contains magnesium,—"a brilliant white metal, with a lustre resembling that of silver, and very malleable." This would have been a pretty fair definition of the more obvious properties of aluminium too in its new form; but no other mention is made of *it* than the one we have alluded to. We might instance other modern discoveries in chemistry, not here recorded, such as that important form of oxygen called ozone, as to which so much has of late been said, not only in the scientific world, but in the ordinary newspaper press; as, for instance, in the *Times*, where almost every day the state of the ozone of the atmosphere is recorded, along with other meteorological phenomena; but we have done enough, we dare say, to draw the author's attention to such omissions, so as to insure, in a subsequent edition (which the work still deserves to reach) a more complete *vidimus* of the "discoveries and applications of modern chemistry."

Is not the title of this work a misnomer, by the way?

Miscellanea.

THE HUTS FOR THE CRIMEA.—The *Gloucester Chronicle* describes a visit paid to the works of Mr. W. Eassie. The huts now being manufactured appear, it is said, greatly superior to those formerly constructed, being considerably higher in the roof, provided with ventilators, and much lighter. The slopes for the beds are now raised, so as to be used as seats. The hospital huts are double the size. Some portable huts are also being constructed. These are designed by Mr. Lauder, who is superintending on the part of Government. The floors are double, and the boards nailed across each other. The frameworks are grooved, and all the partitions slide into their places. The roof and sides are of double boards, and a sheet of felt is placed between the timbers composing the roof. A very large number of men are now at work in preparing the huts. The window-frames, groovings, indeed, everything but glazing and nailing, seems to be done by machinery. Huts have also been in course of formation at the saw-mills of Messrs. Bennett, of Manchester, for 4,960 soldiers. The larger class of huts are 76 feet long, by 16 feet wide. They are lighted by five windows on each side, and have a door at either end. About 500 men have latterly been employed.

BRITISH ASSOCIATION.—The forthcoming Glasgow meeting, it is expected, will be a brilliant one. Besides many of the most eminent British and foreign *savans*, a list of whose names appears in the local papers, two princes of the Bonaparte family appear to be expected, namely, Charles Lucien, Prince of Canino, and Prince Louis Lucien. Some hope seems to be entertained that the Prince Consort will also be present. The City-hall has been redecorated and prepared for the meetings. The new iron-built gallery and front hall, at the recent addition to the bazaar in Candleriggs, is preparing for the reception of geological specimens.

THE IRON TRADE.—The inveterate speculators in this trade, by perpetual talk of a rise of 40s. a ton, are managing, as they doubtless design, to induce fair traders to look upon 20s. as a moderate, reasonable, and advisable increase, just as they would be led to regard 10s. had the gambling outcry been only for 20s. This trade is thus kept in a perpetual fever, under the false pretence that from some peculiar sensitiveness and delicacy of constitution, the iron heart of the trade is liable to be *affected*, more than any other, by fluctuations in the general prosperity or expectations of the country,—mere imposition to serve the purposes of those gamblers who are ever bent on destroying the steadiness and the true prosperity of this important and staple trade of our country, in order to enable them to reap unduly rapid and heavy gains for themselves, at ruinous cost to others. The idea of a permanent rise of 20s. is thus at this moment being made familiar to the thoughts and prospects of the fair dealers in the trade, by the swelling talk of 40s. in which all note of the recent ruinous plunge, in consequence of just such previous procedure, is already being drowned.

REMOVAL OF NUISANCES.—The General Board of Health have issued a notification as to the removal of nuisances, in which, amongst others, they state, that any premises in such a condition as to be a nuisance, or injurious to health, may be ordered by two justices in petty sessions, or by a stipendiary magistrate, to be made safe and habitable, to be paved, cleansed, white-washed, disinfected or purified, and sufficient means of drainage and ventilation, and other accommodation, to be provided; and while any house or building is rendered by a nuisance unfit for human habitation, in the opinion of the justices, the using of it for that purpose may be prohibited. Other notifications are given as to gutters, pools, drains, ashpits, and as to animal nuisances, &c. And it is then intimated that notice of a nuisance may be given by any person aggrieved thereby, or by any local sanitary inspector, any two or more inhabitant householders, relieving officer, constable, or officer of police of the district or place, inspector of common lodging-houses, &c.; the notice to be given to one of the local authorities. The General Board strongly urge on the clergy, employers of labour, and others whose avocations bring them into contact with the classes most exposed to nuisances, the duty of informing themselves and diffusing information as to the provisions of the Nuisance Act, and of doing all they can to promote the election of committees for its execution, especially in rural parishes.

ESSEX ARCHÆOLOGICAL SOCIETY.—On Thursday in last week the annual general meeting of the members of this society was held in the library of Colchester Castle; Mr. Disney, F.S.A. president, in the chair. The Rev. E. L. Cutts, one of the secretaries, read the report of the council, which, amongst other information, alluded to the continued prosperity of the society. The report was agreed to, and office-bearers re-elected. The Hon. Richard Cornwallis Neville, eldest son of Lord Braybrooke, was appointed president in place of Mr. Disney, who resigned. The Rev. Professor Marsden read a paper sent to him from the Rev. Henry Jenkins, of Stanway, on the Traditions and History of Colchester Castle; which was followed by a paper written by the Rev. Mr. King, and read by the Rev. B. Lodge, on the Armorial Bearings of the town of Colchester. Dr. Duncan read a paper upon St. John's Abbey, Colchester, and explained a variety of archæological curiosities exhibited. Mr. Cutts then accompanied the visitors over the old Castle, and explained its various objects of interest, after which they proceeded on a tour through the town to inspect its antiquarian curiosities, including St. Botolph's Priory, St. John's Abbey-gate, Saxon Tower of Holy Trinity, Balkerne-hill, &c. In the afternoon a party of ladies and gentlemen dined at the Cups Hotel.

THE LIGHTING OF DEAL.—We are informed that, after all, Deal is not to have the electric light. An informant states that the electric light was tried, and was not considered satisfactory for the streets. The Pavement Commissioners have agreed to light the town with gas for a further period of ten years.

NEW CHURCHES. — The thirty-fifth annual report of her Majesty's commissioners for building new churches states, that the commissioners had previously reported that 570 churches had been completed, with accommodation for 565,780 persons, 338,575 free, and that they had now to state that twenty-seven churches (in addition), had been since completed.

COLOUR FOR EXTERIORS. — In answer to your correspondent, "T. W." as to outside paint for house walls, I have to inform him that distemper colour made in the usual way, as for inside work, and mixed with oil or paint, will stand the weather, and give the appearance of a painted wall. The mode of mixing the oil with the colour is a secret.—R. R.

*** Let us make a dash at the secret: is soap the substance of it?

BLOOMSBURY.—The old houses at the south end of Kingsgate-street, Bloomsbury, from Eagle-street to Holborn, including the chapel, are now, with the exception of the stationer's shop at the corner of Holborn, being taken down, and I learn are to be rebuilt 7 feet further back than at present. Now this end of the street, which has long been a nuisance, is so narrow, that although 7 feet of width will be a very great improvement, it is not improvement enough, as the street ought to be made at this part as wide as the remainder, which is none too much so; and I trust you will raise your voice in aid of such further widening before it be too late. That the improvement will not at present be carried quite through, by taking down the corner house next Holborn, may be a subject of regret to some, but I do not think it important: it is a very old ricketty timber erection, and cannot last long without more repair than it is worth; and if the widening be properly carried out of the increased width to the back of that house, that lump may well be left to await its early doom. — AN OLD SUBSCRIBER.

SURVEYOR OF BRIDGES FOR WEST RIDING OF YORKSHIRE.—At the Quarter Sessions held at Wakefield, on Thursday, Mr. Bernard Hartley, of Pontefract, was appointed to the office of surveyor of bridges, vacant by the death of his late father. There were six candidates for the office. The salary is fixed at 400*l.* a year, with 150*l.* as travelling expenses. The duties of the office comprised the superintending the repairs of the 325 bridges in the West Riding; of the superintendence of the repairs of the Lunatic Asylum and the House of Correction; and also the furnishing of plans for, and superintending the erection of, lock-up houses, and all other new buildings erected at the expense of the Riding. The salary of the late surveyor was 800*l.*

INAUGURATION OF THE PEEL STATUE AT BIRMINGHAM.—This formal ceremony took place on Monday in last week, in presence of at least 15,000 persons. The statue, which is by Mr. Peter Hollins, and cast by Messrs. Elkington and Mason—the first colossal work of the kind ever produced in one piece in Birmingham—is in bronze, and stands eight feet and a half high. It weighs upwards of a ton. In the casting three tons of metal were run. The statue is placed upon a square pedestal of polished Peterhead red granite. There is a plinth also of polished granite, resting upon a sub-plinth of grey stone. The whole is placed upon an octangular platform, from which railings and lamps spring. The total height from the platform to the top of the statue will be about 20 feet. The pedestal is somewhat colossal, the principal slab weighing about four tons, and the whole about ten. It is from the polished granite works of Mr. Alex. Macdonald, Aberdeen. The pedestal bears the simple inscription "Peel," in bronze. The statue will be placed with the face looking down New-street.

RAILWAY MATTERS.—A joint-stock company is in course of formation, under the title of the Railway Electric Signals Company, for the introduction of a system of signals invented and patented by Mr. Tyer. The directors have constituted the company under the French law *en commandite*, in order to secure the advantage of working the patent for France in that country, and also in Belgium, for which country a patent has also been secured. The capital required is 60,000*l.* in shares of 1*l.* each, with power to increase it to 120,000*l.*——The traffic returns of railways in the United Kingdom for week before last amounted to 449,046*l.* and for the corresponding week of 1854 to 417,669*l.* showing an increase of 31,377*l.* The gross receipts of the eight railways having their termini in the metropolis amounted for same week to 204,338*l.* and last year to 188,132*l.* showing an increase of 16,206*l.*——The number of passengers by the railways through Lille on Saturday in week before last, *en route* for Paris, amounted to more than 10,000. The trains at reduced prices from Dunkirk, Roubaix, and Tourcoing did not stop at Lille to take up passengers, being completely full. A special train left Lille with 750 persons from that town.——The plans for the passage of the Simplon to Turin and Milan, by the valley of the Rhone, are now terminated. The superintending engineers consider that no difficulties exist that have not been previously overcome on other lines. The line of tunnel which is considered preferable would be about 2½ miles long: its elevation above the level of the sea is about 4,200 feet; the maximum for the inclines from 3 to 4 feet in 100; but it is hoped that a reduction to 2½ feet in 100 may be obtained. All the difficult points on the steep declivities of the mountain are passed by means of either open or covered galleries, which will not, it is said, cost more than 120f. the metre.

THE NEW METROPOLITAN BOARD OF WORKS.—It is stated that Sir John Villiers Shelley, Bart. M.P. will be the chairman of the New Board of Works, under Sir Benjamin Hall's Act for the Local Management of the Metropolis. This statement, however, must be premature.

UNION OF SMOKE-PREVENTION PATENTS. — A company is said to be in advanced progress of formation, under the Limited Liability Act, for the purpose of working a variety of inventions for the prevention of smoke.

THE YORK RACE PLATE, 1855.—The subject of this plate is "Percy at the Battle of Holmedon," from Shakspeare's play of "Henry IV." It was designed and modelled by Alfred Brown, and manufactured by Hunt and Roskell.

NEW CHURCH AT SHOOTERS'-HILL.—The foundation-stone of a new church, to accommodate the rapidly-increasing population of this locality, was laid on the Eltham side of the high-road, Woolwich-common, on Wednesday before last. The contract has been taken for 1,235*l.*

MR. J. CARTER.—We regret to hear of the death of Mr. J. Carter, the engraver of Mr. E. M. Ward's "Scene in Change-alley during the Agitation of the South Sea Bubble." Mr. Carter died suddenly, having only just completed an engraving of "West's First Effort in Art," from Mr. E. M. Ward's picture.

REPORT ON THE NEW RIVER WATER.—A "Report to Mr. W. C. Mylne, on the quality of the New River Company's Water," by Mr. T. Spencer, F.C.S. in reference to an analysis by Dr. R. D. Thomson, alluded to in a recent report of the General Board of Health on the epidemic cholera of 1854, has just been printed. Mr. Mylne is the engineer of the New River Company, on whose behalf Mr. Spencer was employed to make new analyses, with the view of subverting those of Dr. Thomson, which alleged, inferred, or insinuated, the existence of two different qualities of water supplied by the New River Company, the one considerably more impure than the other, and probably promotive of cholera in the district (Soho) to which it was supplied. This the company appears to deny, and Mr. Spencer's analyses to contradict; his conclusions being to the effect that the New River water is much the same as respects purity that it was in 1851, when examined by Professor Graham and other chemists. As Dr. Thomson, however, did not give that categorical information as to his analyses which Mr. Spencer demanded, but referred him to a second report not then published, the latter has been unable to identify the precise source of the objectionable water, as to which he considers that there must be some mistake, either in the analyses or in the fact or supposition of its being the New River water.

METALLIC WINDOW-FRAMES.—Mr. D. Moline, of Adelaide-place, London, according to the "Mechanics' Magazine," has taken out a patent for "improvements in the manufacture of metallic window-frames and skylights. (A communication.) Patent dated January 30th, 1855. (No. 227.) Claim: the manufacture of metallic window-frames and skylights, by uniting a series of metallic bars, by placing them in suitable metallic or other moulds, and casting metallic bosses at the junctions or intersections of the bars."

A BOLD SAPPER AND MINER. — An interesting account of Private John Weir's adventurous experiences as a climber of spires and other daring feats in building stages for the ordnance observations, is given in the "History of the Sappers and Miners," just published. At Norwich spire, a brace broke under him; but in his descent he caught hold of another brace, and thus saved his life. The accident did not in the least daunt him, for the next moment he was at work again, as cool and active as ever. In May, 1848, Weir purchased his discharge, and set himself up in business in Halifax, Nova Scotia, where he was afterwards appointed superintendent to the Water Company, at a salary of 200*l.* a year.

IMPROVED PAINTING BRUSHES.—Mr. Thos. Nash, jun. of Great Dover-road, Southwark, who invented and registered the copper band bound painting-brush, has just specified his new patent for "improvements in painting-brushes, applicable also to other brushes, and to brooms." Webbing binding forms one of the chief improvements patented. The specification describes further modifications, as in adopting the webbing binding to sash tools, &c. in combination with string or wire; also combining it with metal band binding, &c.

TENDERS

For four shops, Kingston-on-Thames, for Mr. M. Wall, of Richmond. Mr. S. Dyball, architect. Quantities supplied by Mr. Crocker:—

Patman	£3,587 0 0
Macrostie	3,220 0 0
Towers	3,150 0 0
Long	2,977 0 0
Moorey	2,675 0 0

For six houses in Gately-road, Mile-end, for the Second East London People's Co-operation Benefit Building Society. Quantities supplied by Mr. R. L. Curtis:—

William Dobson	£2,888 18 8!
William Hill	2,310 0 0
Joshua Wilson	1,781 0 0
James Rivett	1,597 0 0
Richard Case	1,497 0 0!

For a main sewer at Stratford-upon-Avon. Mr. Edward Gibbs, engineer:—

Walker, J. Evesham	£1,850	0	0
Marriott, J. Coventry	1,830	0	0
Jones, J. Coventry	1,811	0	0
Smart, W. Nottingham	1,700	0	0
Brown, J. H. Southampton	1,555	0	0
Forrester, W. Stockport	1,400	0	0
Clifford, E. Birmingham	1,310	0	0
Coker and Oakes, Ware, Hertfordshire (accepted)	1,240	0	0

TO CORRESPONDENTS.

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

"T. E. S."—"W. T."—"J. W. B."—"W. W. Jun."—"A Carpenter" (we have given answers to these questions several times)—"A. T."—"E. D. H."—"W. N."—"R. R."—"W. C. H."—"Old Member of the Institution."—"J. C."—"G. H."—"C. A. W."—"J. B."—"T. L."—"A." (a memorial urging the establishment of baths, &c has been recently presented to the corporation, we believe).—"E. C. L."—"E. T. S."—"W. H." (we have already qualified the statement).—"J. S."

ERRATUM.—For "sulphate of lime," alluded to in article, p. 419, read "Colour in Bricks," read "sulphate of zinc."

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

TO ARCHITECTS AND OTHERS.

A GENTLEMAN who has been in practice for himself, desires an ENGAGEMENT as GENERAL CLERK, or to take the direction of an office. Undeniable references. Expectations moderate.—Direct, A. L. M. Office of "The Builder."

BOROUGH of GATESHEAD. — To ENGINEERS and SURVEYORS.—Notice is hereby given that the Office of SURVEYOR and INSPECTOR of NUISANCES to the Corporation of Gateshead will become VACANT on the 14th NOVEMBER next. Candidates for the appointment may forward testimonials of qualification and competency addressed to the Town Clerk, Townhall, Gateshead, before MONDAY, the 29th day of OCTOBER next, on which day the Committee appointed by the Corporation, will meet at TWO o'clock in the afternoon, to receive and examine applications and testimonials of candidates. The duties of such Surveyor will comprise the usual business of the Corporation, including that of the Local Board of Health and the Gateshead Quay Commission. A candidate must be familiar with the practice of engineering in connection with works of water supply, gas, drainage, sewerage, and surface cleansing—competent to conduct surveys, prepare plans, drawings, and estimates of works of every description, and able to superintend the execution thereof, test the materials, and see to the fulfilment of the conditions of the contract for executing such works. The whole time of the Surveyor is to be devoted to the duties assigned to him, and he is to be restricted from undertaking any other employment. Salary 200l. per annum.—Candidates are to state their age in their applications, but are not required to attend personally before the committee, unless specially summoned. The successful candidate will be required to give security for the faithful discharge of his duties by the bond of himself and two sureties in 500l.—By order,

G. J. KENMIR, Town Clerk.

Town-hall, Gateshead, August 29, 1855.

BOROUGH of BLACKBURN.—The Corporation of the Borough of Blackburn are in want of a Person competent to undertake the Situation of GENERAL DRAUGHTSMAN, in the Borough Surveyor's Office; and are also prepared to receive into the said Office TWO APPRENTICES, for a term of not less than Five Years.—Application for the office of Draughtsman, together with the testimonials of the candidates, marked "Application for Office of Draughtsman," as well as all communications from parties on the subject of the Apprentices, must be addressed and forwarded to the Town Clerk, on or before the 15th day of SEPTEMBER next; and any further information may be obtained, on applying to the Borough Surveyor, at his Offices, Sessions Rooms, Heaton-street, Blackburn. THOS. AINSWORTH, Town Clerk.

Town Clerk's Office, Blackburn, 4th September, 1855.

PLUMBER.—WANTED, by the Advertiser, carrying on business in one of the Channel Islands, a first-rate PLUMBER. A steady, active man, with good character, will meet with a comfortable situation, at liberal wages.—Apply, by letter only, to R. S. T. care of Messrs. W. Robertson and Co. Falcon-wharf, Holland-street, Blackfriars.

TO BRASS WORKERS AND FINISHERS.

WANTED, as FOREMAN, in a town manufactory, a first-class Foreman, personally capable of executing every department of the trade, in its greatest excellence. Explanatory letter as to age and previous services, may be addressed to Z. Z. Office of "The Builder."

WANTED, as temporary Assistant in an Architect's Office, a good DRAUGHTSMAN, thoroughly competent to make Gothic, working, and detail drawings.—Address, stating terms, &c. H. F. P. 18, Lincoln's-inn-fields London.

WANTED, a smart active LAD, as an APPRENTICE to the Cabin-making, &c. A small premium required. Application to be made at Mr. MCCLOSKEY'S, 21, Endell street, Long-acre.

WANTED, an experienced BUILDER'S CLERK, with a thorough knowledge of the business, capable of estimating and measuring all descriptions of work. Must be a good draughtsman, and (to undertake the management of the books). A liberal salary will be given.—Address, W. A. Office of "The Builder," stating age, salary required, and where last engaged.

TO PARENTS.

WANTED, a Youth, as an OUT-DOOR APPRENTICE to an ORGAN BUILDER; one who has some knowledge of woodwork preferred. A small premium required.—Apply to Mr. GANE, 38, York-buildings, New-road, Marylebone

WANTED, an ARTICLED PUPIL, in an Architect's Office, at the western end of London, of long standing, and connected with public appointments.—Apply (by letter) to A. B. 47, Mortimer street, Cavendish-square

AUCTIONEER'S and SURVEYOR'S ARTICLED PUPIL.—WANTED, a gentlemanly YOUTH, to enter into an IMMEDIATE ENGAGEMENT, in place of one leaving just left.—Address, W. P. care of Messrs. STREET, 11, Serle-street, Lincoln's-inn fields.

TO SHOP JOINERS.

WANTED, EIGHT or TEN good SHOP JOINERS; constant employment if steady good tradesmen. None need apply, but men with good references to their last employer. Wages 5s. a day.—Apply to the Shop Foreman of B. W. KNIGHT, Builder, Salmon-lane-bridge, Limehouse.

TO GLASS PAINTERS.

WANTED, a first-rate FIGURE PAINTER, one who has worked with some of the best houses, and who understands the business in all its branches. Apply by letter only, stating particulars and terms, to J. P. 30, Ludgate-hill.

WANTED, by a respectable Man, a SITUATION as YARD or WORKING FOREMAN to a Builder. Has held that situation for upwards of twenty years in his late employ. Has no objection to take the charge of a Building or Buildings. The advertiser's character will bear the strictest investigation.—Address, H. K. No. 19, Wilderness-row, St. John-street, West Smithfield.

TO ARCHITECTS AND OTHERS.

WANTED, by a gentleman, aged 26, an ENGAGEMENT with an architect or others as DRAUGHTSMAN and GENERAL ASSISTANT. The advertiser is rapid and skilful, acquainted with the practical architecture, a good colourist, and familiar with office practice; speaks French and Italian, knows the Continent well, and would prefer an engagement abroad. Salary not so much an object as an engagement in an office transacting a large business. Address, X. Y. Z. 8, Melbourne-square, Brixton road, London.

TO PLUMBERS, BUILDERS, &c.

WANTED, by a practical hand, a Situation as PLUMBER, and to fill up time in glazing, &c. No objection to the country. Satisfactory reference as to ability &c.—Address, S. B. No. 27, Union-street, Lambeth-walk.

TO ARCHITECTS, SURVEYORS, AND BUILDERS

WANTED, by the Advertiser, aged 25, a SITUATION in either of the above Offices. He is a good draughtsman, either in detail or highly-finished drawing; capable of taking out quantities or keeping builders' books, and also has had considerable experience in land surveying and levelling. Salary, 100l. per annum.—Address, A.B. at Mr. Pettifer's, Post-office, Southeate-road, Kingsland.

TO PAINTERS, GLAZIERS, &c.

WANTED, by a Young Man, who thoroughly understands his business, a constant SITUATION in the above line. Can turn his hand to paper-hanging, if required. Wages, 1l. 1s. per week.—Direct to E. F. 25, Westmoreland-place, Eagle-street, City-road.

TO BUILDERS AND OTHERS.

WANTED, by the Advertiser, a Situation as GENERAL or SHOP FOREMAN, or to take charge of Works on a gentleman's estate.—Address to No. 236 Mr. Beattie's Newspaper Office, 12, Princes-terrace, Albert-road, Regent's-park.

TO ENGINEERS AND LOCAL BOARDS OF HEALTH, &c.

WANTED, by a Young Man, a Situation as INSPECTOR or FOREMAN, over public or private drainage works, who has just completed the public drainage of a large town. Highly respectable reference as to ability or character can be given.—Address, W. E. Office of "The Builder."

TO BUILDERS AND OTHERS.

WANTS a SITUATION, a competent FOREMAN, for either shop or works. He is a first-rate staircase hand, makes working drawings, takes quantities, and under-stands Gothic detail; would contract for stairs, handrails, or other work. Satisfactory reference given.—Address, C. ELY, 1, Staple's-inn buildings, Holborn.

TO MASTER PAINTERS IN THE COUNTRY.

WANTED, EMPLOYMENT, within ten or fifteen miles from town, for a YOUTH, aged 17, who has been four years at the trade. Address (prepaid), to J. H. 14, Vincent-street, Vincent-square, Westminster, London.

TO BUILDERS AND CONTRACTORS.

WANTED, a SITUATION, by a practical and experienced Man, as GENERAL or SHOP FOREMAN. Unexceptionable freferences.—Address, A. B. 29, Little Russell-street, Bloomsbury.

TO BUILDERS, &c.

WANTED, by a respectable Young Man, a carpenter, aged 23, a SITUATION as FOREMAN or CLERK, or to take charge of a small business. Can undertake to make out plain and working drawings, and is willing to make himself generally useful; or would take any quantity of work by piece.—Address (prepaid), Y. care of Mr. Powell, Perfumer, Angle-terrace, King-street Hamm-rsmith.

TO ARCHITECTS, BUILDERS, &c.

THE Advertiser, having some spare time, wishes to employ it in Making or Colouring Perspectives, Preparing Working Drawings, Specifications, &c. Terms moderate.—Address, O. S. Office of "The Builder."

THE Advertiser, aged 22 years, who will shortly leave his situation in a Builder's office, where he has been entrusted with the general management for the last two and a half years, would be glad of a similar ENGAGEMENT, or in a Merchant's Office. He has been intrusted with the collecting of rents and understands bookkeeping. Unexceptionable reference to present employer. Address, prepaid, to W. R. Mr. Harris's, 45, Grafton street East, Tottenham-court-road.

TO ARCHITECTS AND OTHERS.

THE Advertiser, an Architect, who has had the control of some large jobs, wishes to meet with a gentleman requiring a first-rate DRAUGHTSMAN and CONFIDENTIAL ASSISTANT. Would take the management of an estate, or assist any gentleman intending to build.—Address, S. W. 8, Farringdon-street.

TO BUILDERS AND OTHERS.

THE Advertiser, a Practical Mason, is desirous of CONTRACTING for the STONEWORK of any Building, at the lowest possible price; and the Brickwork, if required. Address, W. W. 78, New-cut, Lambeth, London.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser, 25 years of age, highly respectable, and of considerable experience in the profession, wishes to meet with any Gentleman requiring the assistance of another, either in the Office or in the Outdoor portion of his duties. The latter preferred. A permanency is sought, and a gradually rising salary desired.—Address, prepaid, to Y. O. U. 6, Newington-causeway, Kennington-road, London.

TO ARCHITECTS.

THE Advertiser is open to an ENGAGEMENT with an Architect. He is an expeditious draughtsman, and has been accustomed to making finished, working, and detail drawings. Is well acquainted with perspective preparing specifications, &c and is a good colourist.—Address, J. G. H. post-office, Stourport.

TO ENGINEERS, IRONFOUNDERS, &c.

MECHANICAL DRAUGHTSMAN.—WANTED, by a young man, a SITUATION. He can make fair working drawings, take out quantities for machinery, &c. Has had some experience in iron roofing. Three years in last situation. References given.—Address, ALPHA, care of J. Saunders, Druggist, New Radford, near Nottingham.

LANDOWNERS, AGENTS, and OTHERS. The Advertiser, who can be well recommended, is open to any EMPLOYMENT to which his qualifications as a good general ACCOUNTANT, CORRESPONDENT, DRAUGHTSMAN, &c. are adapted. He will be happy to forward his specimens to any gentleman for inspection. Address, by letter, A. B. Mr. Wilson, stationer, &c. 37, Wigmore-street, Cavendish-square, London.

TO BUILDERS.

CLERK.—A SITUATION WANTED, in a Builder's Office, as junior or otherwise, by the advertiser, who will shortly leave a City firm.—Address, W. G. Office of "The Builder."

A YOUNG MAN, aged 22, desires a RE-ENGAGEMENT. He is a fair Architectural Draughtsman, a good accountant, can map, plan, and take out quantities; and is thoroughly acquainted with book-keeping, and the principles of levelling and surveying.—Address, X. Y. Mr. Lowe, Law Stationer, Bell-yard, Temple-bar.

TO LANDOWNERS, CIVIL ENGINEERS, ESTATE AGENTS, SURVEYORS, AND OTHERS.

A SURVEYOR of many years' general experience, who has also had considerable practice in civil engineering and architecture, and is competent to the management of an estate, an office, or works, is open to a RE-ENGAGEMENT at home or abroad, or to enter into Partnership where an active partner is required.—Address, W. J. News-office, 10, Tottenham court-road.

A GENTLEMAN who has had considerable experience in Civil and Mechanical Engineering is desirous to obtain EMPLOYMENT, either at home or abroad. He would be happy to treat with any Company, Engineer, or Contractor, having works on the Continent, where he has for some years past superintended the construction of some important works.—Address, A. B. 9 Howard-street, Strand, London

TO ARCHITECTS.

A GOOD DRAUGHTSMAN is desirous of an ENGAGEMENT. He is accustomed to the general routine of an office, and understands perspective. Salary not so much an object as improvement.—Address, K. J. S. care of Mr. Hammond, 27, Lombard-street.

TO ARCHITECTS.

A GOOD and expeditious DRAUGHTSMAN, who is perfectly capable of getting up working and finished drawings, perspectives, &c.; is a good colourist, and understands the routine of an office, is desirous of meeting with an ENGAGEMENT. Terms moderate.—Address, C. B. R. 87, Stanhope-street, Hampstead-road.

TO MECHANICAL ENGINEERS.

A FIRST-RATE practical DRAUGHTSMAN is at present open to an ENGAGEMENT. Address, A. R. Brown and Standfast's, 4, Little George-street, Westminster Abbey.

PARTNER WANTED.—To be DISPOSED OF, ONE FOURTH SHARE in the WINDSOR BRIDGE IRON WORKS, near Manchester, in consequence of the junior partner having retired. The plant and machinery is of the best description, and capable of turning at least 1,000l. per month. The trade is principally with British and Foreign Railways, and other large Companies, and being chiefly for machinery, &c. secured by letters-patent. There is nothing to fear from competition. For further particulars apply to Messrs. THOMAS JONES and CO. General Accountants, 17, Clement's-lane, London.

WRITING and GRAINING.—The Trade Prices for Writing or Graining may be obtained by Plumbers, Painters, Builders, and Railway Contractors, forwarding their business card to SPARKS STRACEY, 1, John's-terrace, Webber street, New-cut, Lambeth.

Wooden Tiles and Moveable Parquets.

THE attention of Architects, Builders, &c. is respectfully called to these new inventions, combining utility with convenience and elegance, at a moderate cost.

WOODEN TILES, now for the first time introduced into this country, possess the great advantage over all other tiles of being dry and warm under the feet, even in the coldest season, thus removing the evils of cold and dampness arising from other materials. They can be fixed upon any spot WITHOUT NAILS or glue, and can, conversely, be removed at pleasure, and relaid in any other place with the greatest facility. Being of small dimensions they are essentially portable, and well adapted for the use of churches, chapels, halls, &c. They are made in the form of squares, lozenges, and other forms, of waiusscot mahogany, walnut, and other woods, at prices commencing at 2s. per foot superficial, including fixing, in or near London.

MOVEABLE PARQUETRY, made upon the same system, but of larger dimensions than the above, includes every variety of geometrical design, more or less ornamental, such as "Stars," &c. and will, in a few days, convert an ordinary room, hall, or gallery, into an elegant drawing, ball, or assembly room, from which they can again be removed to any other locality without trouble.—Further particulars will be forwarded on application to the LONDON PARQUETRY, 8, Whitefriars-street, Fleet-street.

WOOD-CARVING and FRET-CUTTING. T. HEWETSON, Wood-Carver, and Fret-Cutter, 5, Hatton-garden, London, begs to inform Architects, Builders, Ironfounders, Cabinet and Pianoforte Makers, that he is prepared to execute any kind of Architectural or Ornamental work, with accuracy and despatch. T. H. particularly solicits the attention of Ironfounders, having had many years' experience in ornamental pattern making.—Estimates furnished.

BANK of LONDON.—Incorporated by Royal Charter.—Head Office, Threadneedle-street (late Hall of Commerce); Charing-cross Branch, 450, West-end.

Interest allowed on Current and Dep sit Accounts.

Every branch of banking business undertaken.

Full particulars of terms on application, or sent by post.

MATTHEW MARSHALL, Jun. Manager.

Threadneedle-street, Sept. 1, 1855.

TO BE DISPOSED OF, a CABINET and UPHOLSTERY BUSINESS, in the county of Huntingdon. A good opportunity for a young man. The above has been carried on with success for the last forty years.—For further particulars apply to E. E. Post-office, Peterborough; or to Messrs. BLYTHE and Co. 4, Chiswell-street, London

SAFE and PROFITABLE SPECULATION. TO BE DISPOSED OF immediately, a very valuable BUILDING AGREEMENT direct from the freeholder, partly executed (some of the houses are completed and occupied), including some houses now in progress, together with the scaffolding, wood, stone, &c. The advertiser being engaged in another business at a distance requiring all his time, will deal liberally, regardless of the value, with a prompt purchaser.—Apply to MR. GLAZIER, Auctioneer, 41, Charing-cross.

LOANS, at Five per Cent. in connection with Life Assurance, on personal security, for one, two, or three years, repayable by instalments.—ENGLISH and FOREIGN LIFE ASSURANCE OFFICE, 135, Oxford-street.

LOANS from 25l. to 1,000l. upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding fifty months, are readily OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules 6d. each copy. 1s. per post.

CHARLES JAMES THICKE, Resident Secretary.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

This Paint possesses in an eminent degree the following advantages over all other known Pigments:—
INDESTRUCTIBILITY BY HEAT—PRESERVATION OF IRON FROM OXIDATION, WOOD FROM DECAY, AND MASONRY AND BRICKWORK FROM DAMPNESS—PERMANENCE OF COLOUR AND FREEDOM FROM DELETERIOUS PROPERTIES—SUPERIORITY OF BODY.

The Protoxide Paint as at present produced is of one shade of colour, viz.:—a pale drab, but it may be tinted with any other colour to suit the taste and purpose for which it may be required. It is not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind, and is therefore well adapted for the interior of Ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.—Sole authorized Agents for England—

MESSRS. C. GRABHAM AND CO. 4, BARGE-YARD, BUCKLERSBURY, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK—LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works situate on the Bristol and Exeter Railway, five miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in use market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

PORTLAND CEMENT.—6, South Wharf, Paddington. CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality, a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminently hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GRAVES, Esq. at his Works, near the River Aton, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White Maslin, Hair, Lias Lime, Laths, Slates and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Porcelain.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILDRON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not swell, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Course	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour resembling the Bath stone.—CHARLES RICHARDSON, 6 South Wharf, Paddington.

11 George-yard, Lombard street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent. ROMAN and PORTLAND CEMENT of the first quality manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise. Apply to G. BOOTH, Agent, as above.

TO BUILDERS CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.

IN EVERY VARIETY.

SOUTHAM BLUE LIAS LIME and PORTLAND CEMENT WORKS.—OLDHAM and TATHAM are now prepared to receive orders from contractors, builders, and merchants for Ground and Lump Blue Lias Lime, also for Portland Cement and Lias and Bath Cement, both of which will be found of very superior quality, and will be improved by the addition of two or more parts of sand to one of cement. Tons and Tons boats can run alongside any wharf or works, and all orders addressed to Warwick will receive prompt attention.—Office: Warwick.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally that they have completed their works for the manufacture of PORTLAND CEMENT, and from their continuity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confident hope they shall be able to supply the public with a first-rate article in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask.—Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

Agents in London:—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SEconds, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 26, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUN OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers.—Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 69, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 981, of the Great Exhibition, rank the Manufactories known so long as "The Tilleries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 50s. per 1,000; floor bricks and 6 inch pavings, at 37s. 6d. per 1,000; 9-inch pavings, at 57s. 6d., per 1,000; 9-inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Covings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 8, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

DUTCH CLINKERS, 32s. per thousand, by the best Makers.

WELSH, STOURBRIDGE, AND NEWCASTLE FIRE-BRICKS, TILES, AND TILES, at much less than cost prices. The BUSINESS to be DISPOSED OF, with the valuable connection, and a portion of the PREMISES to carry on the same, TO BE LET, at almost a nominal rent. For particulars inquire on the premises, Honduras Wharf, Bankside, Southwark, London.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 25s. per thousand; Grizzles 28s.; Malms 30s.; Rough Stocks, 32s.; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, hand washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS

GOWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE, 5, ADELAIDE-PLACE, London bridge.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and flare, bricks, fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 59, Nelson square, Blackfriars-road.

BRICKS.—Builders wanting Bricks of good colour, are solicited to call on E. PARKS, Lewisham, and see the prices, &c. Carriage within six miles on the most reasonable terms. Red facing bricks at 30s. All kinds of tiles, paving bricks for oven building, salt glazed stone pipes manufactured; also all kinds of red pipes and pots.—Application by letter punctually attended to.

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, at very low prices, a large quantity of very hard BUILDING BRICKS, TILES, and PAVING WARE; also, 3, 4, 6, 9, and 12 inch red Socket Drain Pipes, in 2 feet lengths.—Apply to ST. JOHN HEWITT, Redhill Works, Southampton.

TO BRICK and TILE MANUFACTURERS.—TO BE DISPOSED OF, on account of the contemplated retirement of the Proprietor, the LEASE and BUSINESS of a capital BRICK YARD, with Two large Kilns, and all the necessary requirements for the continuance of the extensive and lucrative trade, for many years conducted on the premises. The yard has an inexhaustible supply of earth of the best quality, and admirably suited for the production of goods, either for building or agricultural purposes, the demand for both being large and daily increasing. Fuel is abundant and moderate in price, and the local situation most inviting to a perseveringman of business. The convenient residence and farm of about 90 acres of good land in excellent condition, near to the Brickyard, is used by the proprietor in connection with the concern, both the yard and farm being held for terms at very low rentals. The present proprietor holds other farms in the immediate vicinity, which may if desired (and a arrangement) be rented in addition to the above-mentioned Brickyard and Farm, making altogether nearly 400 acres, which will be jointly occupied to great advantage.—Address, in the first instance, to A Z No. 91, Farringdon street, London.

TO ALL POTTERS, CHINA, AND BRICK AND TILE MAKERS.

HANDS'S GREAT ECONOMISING PATENT KILN.—The merits of this kiln are so to economise the heat in time of burning and cooling for drying purposes, as to enable any person so employed to keep up the works all the year round if he please, without any additional cost of fuel beyond the consumption of about six or seven tons of coal to burn about 20,000 of goods in each kiln. Any persons engaged in the above works, and desirous of availing themselves of this opportunity for license or otherwise, apply to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom, Surrey.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 20, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 18 Wharf, Maccles-field-street North, City-road, for the sale of CHIMNEY-PIECES, and other articles, useful architectural, and ornamental, invite Architects, Builders, and the trade generally, to inspect the same. A large assortment of fancy articles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.
July 25, 1855. C. ADDEY, Secretary.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Statuary, and other Marbles, in blocks of all dimensions, delivered on board at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden Wall Statues, Vases, Tazzas, Consoles, &c. executed and delivered at reasonable rates. For further particulars apply at the offices of the Company, 18, Cannon-street, City.
WILLIAM W. BONNIN, London Secretary.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the trade with the finest marbles at the lowest prices. Sawn Slabs, Chimney-pieces, Vases, &c.; Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account.—Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any other house.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL,
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London. THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the metropolis; consisting of a selection of upwards of two hundred, all manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of the great Drawing-Room Chimney-Pieces in Statuary Marble; elaborate, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Egyptian, Verd Antique, Brocatella, Dove, St. Anu's, and Serpentine Marble, suitable for Dining-Rooms, Halls, Libraries, Vestibules, Entrance-Halls; and a great variety of others in Veined, Sardinian, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, Best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves

JOHN BAZLEY WHITE and BROTHERS,
MARBLE MERCHANTS,
MILLBANK STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

YORKSHIRE STONE.
NEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Parlr Stone, Springs, &c. of the best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms. NEO. VINT and BROTHERS will gladly forward prices by Post on application. Address, Idle, near Leeds.

GRANITE FOR SALE.—A large quantity of DEVONSHIRE BLOCKS, prepared as Ashlar; a magnificent AXE-DRESSED LANDING, 16 feet long, 6 feet 6 inches wide, and 1 foot thick; TWO GRAVE-STONES, fine-axed, each 6 inches long, 3 feet 6 inches wide, and 6 inches thick, &c. &c. Lying at Grosvenor Wharf, Millbank-row, Westminster, is offered for Sale on reasonable terms.—Apply at the Haytor Granite Company's Office, No. 4, Millbank-row.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

TO COLOUR-MAKERS, BLACK-LEAD MANUFACTURERS, and OTHERS.—Two or Three Pairs of MARBLE and GRANITE RUNNERS TO BE SOLD.—Apply by letter, in the first instance, to Mr. WILLIAM THOMAS, Builder, 73, York road, Lambeth.

MARBLE and GRANITE RUNNERS: Two or Three Pairs TO BE SOLD.—Apply by letter, in the first instance, to Mr. WILLIAM THOMAS, Builder, 73, York-road, Lambeth.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—BRIGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard
This Granite is selected for the New Westminster-bridge.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS,
QUARRYMEN AND STONE-MERCHANTS,
BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tenfield-place, Leeds.—To Builders and Buyers of the Best Quality.—Direct from the Quarries in truck-loads of five tons. Pavings, Landings got out to sizes, Steps, Copings, &c. &c. supplied on most advantageous terms by railway, and with despatch. Prices sent on application.

PORTLAND STONE.—NORTON and WHITE beg to solicit the attention of the Building Trade generally to their extensive STOCK of PORTLAND STONE, comprising every useful size, which they are now offering upon most advantageous terms. York Landings, Paving, Sills, Sinks, &c. Address, 24 Wharf, Harrow-road, Paddington.

AUSTIN'S ARTIFICIAL STONE.—This material (frequently confounded with Portland Cement) has now been in extensive use among the highest class of residences for about twenty-five years. During that time a collection of Ornamental Work, such as Vases, Figures, and Fountains, has been accumulating, of which the public have scarcely any idea. Suffice it to say, that a single copy of each work would collectively amount to between 4,000l. and 5,000l. In consequence of this Terra-cotta, an I all other kind of Pottery there is no distortion of form by the process of baking, and, instead of the glazed surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being waterproof.—AUSTIN and SEELEY, Nos. 1 to 4, Keppel-row, New-road, Regent's-park.
*** A large Stock of Ornamental Chimney-tops.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Builders, Contractors, and Others, that his Price Lists for Slates and Slab Work, can be had on application, enclosing a postage-stamp. Country and export orders promptly attended to.—N.B. A liberal discount to the trade.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.
ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate Cisterns made to any size. J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the slabs of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave-place, Pimlico.

LLANGOLLEN FLAG and SLATE COMPANY.—The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag-Stone Company and the Llantysilio Slate Company, are now prepared to supply architects, contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description; Cisterns, Chimney-pieces, Baths, Filters, Larders, Mangers, Ridging, and every other article made of this beautiful material, all of superior quality. The Llangollen Slabs, from their great durability, and the extraordinary size in which they can be obtained, are peculiarly adapted for the paving of railway stations, malthouses, breweries, conservatories, warehouses, &c. A cheap variety of self-faced flags for street paving, &c. can be supplied at very moderate prices.—Prices and further particulars can be had upon application to Messrs. JOHN TAYLOR and SONS, 6, Queen-street-place, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, 4 Wharf, South Wharf road, Paddington; or to Mr. GEORGE F. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.
Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

ASPHALTE PAVEMENT, 2s. 3d. per square yard, 2½ inches thick, for footpaths, railway platforms, school yards, garden paths, &c. Carriage Roads: 3s. to 3s. per square yard. Railway Arches made waterproof, 2s. per square yard. Every description of pavement laid down, and the work guaranteed.—Apply to Messrs. WRIGHT and BROWN, 32, Bucklersbury, City.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, to the adornments of our noblest buildings. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition, and will be found to be a different material to that now being imitated by puffers and manœuvrers, with only three or four years' experience, and without practical knowledge. Some of the works recently completed by M. H. B can be referred to the sole of the embellishments to the external part of Cliden House, his Grace the Duke of Sutherland's; also Tottenham and Kingsland Churches, the tablets to the London-road Chapel, containing from 3,000 to 4,000 feet cube; the colossal Britannias, 19 feet high, at the County Fire Offices, Cornhill and Lombard-street; the Arms, with the sidereal group, at the Kent Mutual Insurance, Queen street; and other works elsewhere, too numerous to mention. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

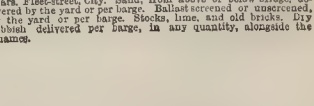
TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Praed-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

IMPROVED SLUICE-COCKS, for Water, Gas, or Steam, brass faced, and sluices raised by square thread, engine-turned screw, working in brass nut, in every respect as good as can be manufactured, are offered at the following prices per inch:—

2-inch.	3 and 4 inch.	5 to 9-inch.	10 to 15-inch.
10s.	12s.	14s.	18s.

Lithographs of the improved self-lubricating and various other constructions, with descriptions and prices attached, may be had on application.
Simple purchase Builders' Crabs, as above, fitted with two handles, and wrought-iron braces and spindles, with set to throw in and out of gear.

Price	70s. each.
Stronger and larger ditto	6l. 10s. do.
Double purchase	8l. 8s. do.
Treble purchase	12l. 12s. do.



BARRETT, EXALL, and ANDREWS, Kate's Grove Iron-works, Reading. Agents in London, DRAY and CO. Swan lane.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins which supply valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 2.
HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.
The Equilibrium Ball-valve is simple and certain in its action, and more compact than the common Cocks now in use.
Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.
THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

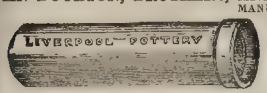
TO CONTRACTORS.

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for a period, of 8-horse, 10-horse, 12-horse, 15-horse, 20-horse, and 30-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work.—Apply to Messrs. MEDWIN, HALL, and CO. Engineers, 99, Blackfriars-road, Sole Patentees and only Manufacturers.—N.B. Any of these Engines may be purchased.

STEAM-ENGINE, of 24½-inch Cylinder, 4-feet stroke. TO BE SOLD.—Apply by letter, in the first instance, to Mr. WILLIAM THOMAN, Builder, 73, York-road, Lambeth.

WANTED, a Second-hand, High-pressure CONDENSING STEAM-ENGINE, about 8-horse power. Address, stating lowest price, O. R. Mr. Cutler's, Bookseller, Wellington, Somerset



PORTABLE ENGINE for SALE.—Six horse power, of Garrett's manufacture, two years old, in perfect working order. May be seen at work at Hainault Farm, Dram Tile Works, near Ilford, where all particulars may be obtained; or at Mr. SCOTT'S Offices, 5, Charing-cross, London. September 3, 1855.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depot, Whitefriars Wharf, Cannon-row, Westminster.

THE PERMANENT WAY COMPANY, 36, Great George-street, Westminster, holding a large number of patents relative to the construction and reparation of the permanent way of railways, are at all times ready to communicate on the subject, and to grant licenses for their use. From the facilities thus afforded to companies to negotiate for a number of inventions, much trouble and chance of litigation is avoided. The Company undertake arrangements for bringing new inventions on the subject before the public, upon terms advantageous to the proprietors of patents.—Applications may be made to CHARLES MAY, F.R.S. the Manager; or to

WILLIAM HOWDEN, Secretary.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

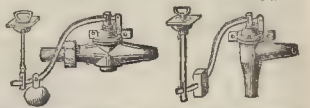
Plumbers' Brass Work of every description.

BATEMAN AND MOORE'S PATENT HYDRANT.

SUPERIOR GLAZED STONEWARE
DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.



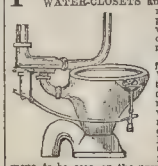
W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

E. and W. STURGE invite special attention
to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c.; Slates of the best quality, wholesale and retail. Country builders and others supplied with all information on application to E. and W. STURGE, Bridge-wharf, City-road.

N.B. The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made.
January, 1855.

LAMBERT'S SELF-CLOSING
LAVATORY AND CLOSET VALVE
No. 7.



Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

N.B. No 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 13s. 6d. each.

STONEWARE GLAZED POTTERY,
LYTCHETT, near POOLE, DORSET.—TO BE DISPOSED OF, by PRIVATE CONTRACT, the Lease, Plant, and Stock of the above Premises. The land contains a great depth of the finest clay, fit either for shipping or manufacture. The Glazed Drain Pipe and Fire Brick are equal if not superior to any yet in the market.—Further particulars may be obtained on application to H. F. FISHER, Blandford, Dorset.

PATTEN'S PATENT HIGH-PRESSURE
WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. PRICE for Closet and Apparatus COMPLETE FROM 22s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 32, Old Fish-street, near St. Paul's, London.

CROWN GLASS, 18 TABLES, 32s. PER CRATE.

VICTORIA POTTERY, LEIGH,
NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,
MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS, warranted by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

HOSE PIPING.—WAITHMAN'S
PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.

EDWIN WHITE will SELL by AUCTION, without the slightest reserve, at the BRICK FIELDS, on the west side of the Archway-road, Highgate, Middlesex, on WEDNESDAY, SEPTEMBER 12, at ONE for TWO precisely, in lots, to suit capital STOCK BRICKS, fine rough stuff, and place Grass in and Place. On view two days prior, when catalogues may be had at the Brickfield : at the Archway Tavern, Upper Holloway ; and at the Auctioneers, No. 170, Bishopsgate-street Without

CHELSEA. TO BUILDERS, COACH PROPRIETORS, AND CAPITALISTS.

MR. T. W. WOOD will SELL by AUCTION, on MONDAY, SEPTEMBER 17th, 1855, at TWELVE o'clock precisely, at the MART, near the Bank of England, by order of the Mortgagees, with power of Sale, in Three Lots, the following very desirable long LEASEHOLD DWELLING-HOUSES and BUSINESS PREMISES.

Lot 1.—All that brick-built substantial Message or Dwelling-house, situate No. 42, Radnor-street, in the parish of Saint Luke, Chelsea, in the occupation of Mr. George Lill, where, at the low rent of 26l. per annum, subject to a ground-rent of 6l. per annum ; unexpired term, about one thousand years.

Lot 2.—All that capital brick-built and commodious Message or Dwelling-house, situate No. 41, Radnor-street aforesaid, with the convenient sixpenny-office adjoining, now in the occupation of Mr. Lill as an Inn, and known by the sign of the Queen's Head, and also as a Coach-office for a coach, bus, cab, or van proprietor. Estimated rental, 40l. per annum, subject to an apportioned ground-rent of 8l. per annum ; unexpired term, eighty-six years. A right of way reserved to the owner and occupier of Lot 3, to pass through, or under the gateway, as will be shown in the Plan to be produced at the time of the sale.

Lot 3.—Comprises all that brick-built extensive Builders' Workshop, with Steps and Painters' and Plumbers' Shop under the same, a builder's office, and Stabling for four horses, situate in the rear of Lot 2, with a carriage-road to Radnor-street. This lot is in hand. Estimated rental, 50l. per annum, subject to a ground-rent of 10l. per annum ; unexpired term, eighty-six years. The entrance or right of way to this lot will be shown in the plan to be produced at the time of sale.

The fixtures, consisting of stoves, dressers, racks, and manners &c. will be included in the purchase of each lot. There is a very substantial brick boundary wall to this estate.—May be viewed by application to Mr. W. T. Star, 93, Kings-road, Chelsea, and printed particulars and conditions of sale may be had two days prior to the sale, at the Offices of Mr. Charles Etherington, Solicitor, 29, Walbrook, London, where a plan of the estate may be seen ; of Mr. W. T. Star, as above ; at the Place of Sale ; at Mr. Etherington's Offices, Chatham ; and of the Auctioneer, Chatham.

SOUTH LAMBETH.—Six Acres of very valuable Freehold Building Land.

MESSRS. NORTON, HOGGART, and THIST have received instructions to OFFER for SALE, at the MART, on FRIDAY, SEPTEMBER 14, at TWELVE, in lots, very valuable FREEHOLD BUILDING LAND, free of land-tax, situate in the rear of the Town, South Lambeth, nearly Vauxhall-bridge. Each lot will consist of about half an acre, with a frontage to a proposed new road of 40 feet.—Particulars and plans may be had of Messrs. Druce and Sons, Solicitors, Billiter-street, 62, Old Broad street, Royal Exchange.

SALES BY AUCTION.

COWLEY, MIDDLESEX.—About a quarter of a mile from the Uxbridge Station on the Branch Line of the Great-Western Railway.

MR. STRANSOM will SELL by AUCTION, at the CHEQUERS INN, Uxbridge, on THURSDAY, SEPTEMBER 20, at TWO o'clock, valuable FREEHOLD and TITHE-FREE BUILDING LAND, of about Four Acres in an exceedingly healthy situation in the parish of Cowley, Middlesex, and close to the town of Uxbridge, commanding extensive views, and in the immediate neighbourhood of the much-admired river Colne in which the purchaser of each lot will have an extensive right of fishing. The land is eligibly adapted both for building purposes and for brick making, as it contains earth of the finest quality, and of great depth. The above presents an opportunity rarely to be met with in this neighbourhood, as a greater portion will be submitted for sale in one lot, but of an acceptable offer be not made. It will be put up to auction in various lots. May be viewed, and particulars, with conditions of sale and plans annexed, obtained of Messrs. Woonnacott and Sons, Solicitors, Uxbridge ; of T. F. Jennings, Esq. Solicitor, Hillingdon-end, Uxbridge ; and of Mr. Stransom, Auctioneer, &c. Uxbridge, Middlesex.

ABSOLUTE SALE.—ENFIELD, MIDDLESEX.—Family Residence, and Twelve Acres of Meadow, Arable, and Building Land.

MR. MURRELL has received instructions to SELL BY AUCTION, at GARRAWAY'S, on FRIDAY, SEPTEMBER 14, at TWELVE, in lots, a valuable FREEHOLD ESTATE, comprising a residence, of modern elevation, most desirably situate close to the town of Enfield, Middlesex, within three minutes' walk of the railway station and the church, with pleasure and kitchen gardens, orchard, and stabling ; with several enclosures of rich meadow, admirably adapted for building purposes, having two communications with the high road, and possessing frontages to the private road, containing in the whole about twelve acres.—May be viewed, and particulars with conditions of sale, had of Messrs. Harrison, Solicitors, 5, Walbrook ; at Garraway's ; the principal Inns at Enfield, and the neighbourhood ; and of Mr. Murrell, Auctioneer and Land Agent, 1, Walbrook, City.

FREEHOLD LAND.—To BUILDERS or Parties wishing to build Suburban Residences.—FREEHOLD LAND TO BE SOLD, in some of the most eligible building estates in the neighbourhood of London, viz. :—
FOREST HILL, Croydon Railway.
ST. MARGARET'S, near Richmond, South Western Railway.
OAKLANDS GRANGE, Weybridge, Surrey, ditto.
HOUNSLOW, Middlesex, ditto
TOTTENHAM-GREEN, Eastern Counties Railway.
PUTNEY, South Western Railway.
RECTORY ESTATE, EALING, Great Western Railway.
The WADDINGTON ESTATE, ENFIELD, Eastern Counties Railway
WOOD-GREEN, Green-lanes, Hornsea, Great Northern Railway.
OLD FORD, Stratford, Eastern Counties Railway.
Part of the purchase-money may remain at 5 per cent. interest. Parties assisted in the erection of their own residences. Several Plots to be Let on Building Lease. Money advanced to respectable parties.—Apply to Mr. GEORGE MORGAN, 5, Chancery-lane.

MAITLAND-PARK, HAVERSTOCK-HILL, Hampstead road.—LAND-TAX REDEEMED TO BE LET, upon Building Leases for ninety-nine years, from Christmas 1852, desirable BUILDING SITES upon the above Estate. The continued demand for houses in this locality, and the eligible opportunity now offered for the erection of villas adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—Fifteen acres of the above plateau, in the occupancy of the Orphan Working School, 32, Ludgate-hill ; Messrs. TERRELL and CHAMBERLAIN, 30, Bucrahall street ; the Architects, Messrs. WEIMING and ASHDOWN, 49, Charing-cross ; or at the Porter's Lodge, on the Premises.

ST. MICHAEL, CORNHILL.—TO LET, upon building leases, for a term of sixty-one years, the SITES of the NORTHERN PORTION of the GEORGE and VULTURE TAVERN and No. 6, Pound, on the south side of St. Michael's-alley, Cornhill. The Churchwardens and Committee of Overseers will meet in the Vestry-room, in St. Michael's Church, Cornhill, on THURSDAY, the 20th SEPTEMBER, at TWELVE o'clock precisely, to receive TENDERS from parties desirous of taking the above sites, which are divided into two lots, the terms and conditions may be seen, or printed copies may be some obtained on payment of 1s. upon application to Mr. W. A. MASON, Architect and Surveyor, Great St. Helen's ; or to Mr. HENRY HOPPE, Vestry Clerk's Assistant, Cornhill. Parties Tendering must send in Tenders to the Vestry Clerk on or before the 19th SEPTEMBER, under cover addressed to the churchwardens, and must send "Tender for Ground in St. Michael's-alley," and must be personally in attendance at ELEVEN o'clock on the 20th SEPTEMBER. The churchwardens and overseers do not bind themselves to accept the highest or any other Tender. Should any Tender be accepted, the party Tendering will be required thereupon to sign a memorandum, a form of which may be previously inspected upon application to the Vestry-clerk.

TO BUILDERS AND OTHERS.

FREEHOLD LAND, in eligible Plots for Building Purposes, situate near to Railway Stations or Omnibus Routes, TO BE LET or SOLD, in
FOREST HILL, | SOUTHGATE,
BEULAH SPA, | PUTNEY'S BAR,
RANGER-LANE, TOTTENHAM
Apply to Mr J. SMITH, Land and Building Surveyor, 12 Warwick-court, Holborn.

LAND FOR A VILLA.—Several very desirable PLOTS, on a gravelly soil, of from one to eight acres each, in Oatlands Park, near the Weybridge Station, 18 minutes from London, TO BE SOLD. Eligible plans and particulars apply to Messrs. SNELL, Albemarle-street.

HAVERSTOCK-HILL.—To BUILDERS. TO BE LET, in the MAIDEN and QUEEN'S ROAD both main roads, some commanding FRONTAGES for Shops and Private Houses. All the sewers are in the estate, roads all formed, and new building Term, moderate rents from ground rents. Bricks supplied at low prices, and liberal cash advances. Apply to Mr JOHN MOORE, 86, Chalton-street, Euston-square.

TO BE LET, with immediate possession, a substantial BUILDER'S and CARPENTER'S BUSINESS STOCK IN TRADE, with a twenty lanes of London.—Apply to Mr LAWRENCE, Red Lion Hotel, Hampton, Middlesex.

TO BE LET, in consequence of the proprietor retiring from business, on lease, for a term of years, with possession at a short time, a well-established TIMBER YARD and BUSINESS, where a large and successful trade has been carried on for thirty years, with workshops, steam-saw mill, and private house adjoining, situate in the centre of a large and improving town in the midland counties. A part, or the whole of the stock can be taken at a fair valuation. The premises are well adapted for carrying on a large building trade.—For further particulars, apply by letter to W. B. Office of "The Builder."

GUILDHALL, Sept. 5, 1855.—The COMMITTEE for LETTING the CITY'S LANDS will meet at Guildhall, on WEDNESDAY, the 12th SEPT. inst. at ONE o'clock precisely, to receive PROPOSALS for LEASES, of a House, No. 3, Broad-street-buildings ; a House, No. 23, Cheapside ; and a House, No. 26, Great Leonard-street, Finsbury.—Further particulars and plans may be seen, and forms of Tender obtained, at the Architect's Office, Guildhall.
FERDINAND BRAND, Comptroller.

HAMPTON-COURT.—BUILDING LAND TO BE LET, for ninety-nine years, with option of purchase, near the above station, and close to East Mousley Church. A portion of the estate has been laid out for villa residences, some erected, with gardens running down to the river Mole. There is a plot containing about two acres, very eligible for a first-class house, at a very moderate price. The plots vary in depth from about 120 feet to 400 feet, and in price from about 2s. 6d. to 5s. per foot frontage. Another portion has been devoted to cottages (which are much required in this locality), at extraordinarily low rates. The residue of the estate is admirably adapted for shops or small houses.—Apply to FREDERIC LETT, Esq. Architect, 36, Frederick-street, Strand, London.

LOWER THAMES-STREET.—TO BE LET, by Tender, by the Worshipful Company of Armourers and Braziers, on a Lease for Twenty-one years from Midsummer, 1856, the extensive Premises known as the GLOBE-YARD WAREHOUSES, situate in the above street, nearly opposite the Custom-house. The lessee will be required to pay all taxes and rates, including sewers and paving rates, and all assessments for sanitary purposes, and the expense of fire insurance, the land-tax being redeemed ; and the lease will contain all covenants usual in the Company's leases. Sealed Tenders to be delivered at Armourers' Hall, Coleman-street, on or before the 3rd OCTOBER next, where parties making the same are required to attend the following day, at HALF PAST TWO o'clock. The Company do not bind themselves to accept the highest or any other Tender.
JOHN PONTIFEX, Clerk,
5, St. Andrew's-court, Holborn.

DOVER.—VICTORIA PARK.—FOR SALE, this valuable PLOT of FREEHOLD LAND, containing nearly seven acres, most delightfully situate on a gentle slope on the south-east side of the castle, and admirably adapted for the erection of either a mansion, an elegant crescent, or detached villas. The early completion of a direct line of railway from the metropolis, which may now be safely relied upon, will restore to Dover its former important advantages, and thus ensure a sure and just issue to any judicious building enterprise.—Apply to Mr JAMES WOOLFOLD, Estate Agent, Dover.

EXTENSIVE BUSINESS PREMISES, situate at No. 3, Union-street, East Spitalfields, consisting of a house, with lofty and commanding shop, warehouse in the rear, with spacious entrance in Crispin street. TO BE LET, on a Repairing Lease for Twenty-one Years, by PUBLIC TENDER, by the parish of St. Mildred, Bread-street, London. Sealed Tenders to be sent, marked "Tender for Lease of House, No. 3, Union-street East," to Mr. STEINBERG, Vestry Clerk, 33, Bread-street, Cheapside, on or before FRIDAY, the 21st of SEPTEMBER, 1855. May be viewed on application at the Premises ; and particulars of terms obtained, and specification of repairs inspected, at Mr. STEINBERG'S Office ; and at Mr. HAWTREY'S, No. 37, Canon-street West.

TO BE DISPOSED OF, by PRIVATE CONTRACT, the GOODWILL, PLANT, and POSSESSION of ASHFORD MARBLE WORKS, DERBYSHIRE, with the STOCK IN TRADE thereon. These old established works are situate in the very centre of the marble district of Derbyshire, and command the advantages of the cheapness of labour, in a country village, with an excellent business connection, comprising some of the first architects and builders in the large provincial towns. From the excellent Black Marble Quarries close to the works, a Rosewood Marble Quarry within one mile, and quarries of the celebrated Fossil Marble within three miles. The river Wye runs by the works, affording an ample supply of water for use in the manufactory, and a motive power for the machinery, unattended with the expense of steam. The works themselves, which are of a most substantial character, consist of a marble-yard, measuring about one acre, with sawing and polishing mills, fitted with machinery, worked by two undershot water-wheels, workshops, show-room, counting-house, and apartments for a foreman. There is a dwelling-house, with a garden and orchard adjoining the works, and about nine acres of land are also held the tenth. The premises are about two miles from Ashwell, 3 miles from Rowsley Railway Station, thirteen miles from Chesterfield, seventeen miles from Sheffield, nine miles from Buxton, and thirty-four miles from Manchester. From Rowsley Station there is every facility for railway communication to all parts of the kingdom, except in the direction of Manchester ; and when the railways are completed for connecting Buxton and Whaley with Stockport, direct railway communication with Manchester and the North-west will be brought within ten miles of the works. It is rarely that such an eligible opportunity for embarking in business is presented to persons having the command of 1,000l. or 2,000l.—Further particulars may be known on application prior to the 22nd day of SEPTEMBER, 1855, at the house of JOHN TAYLOR, Solicitor, Bakewell.
August 29, 1855.

SALE by TENDER, of TWENTY-THREE HOUSES, in Lots, the following very desirable LEASEHOLD PROPERTY, forming the whole of the splendid terrace known as St. Columb-terrace, Kensington park, Nottting-hill,—twenty-three residences in carcase ; each residence has the use of a pleasure-ground in the rear, common to all the houses. The most beautiful spot around town, lying high, dry, and healthful, and which requires only to be known to attract residents to this favoured locality. The houses are well built, of handsome elevation, several being ornamented with portices, and are TO BE SOLD, by direction of the first mortgagee, BY TENDER, under his power of sale, in several lots.—The several Tenders to be delivered enclosed "Tenders for the Purchase of St. Columb-terrace," at the Offices of Messrs. HOLY and CARTWRIGHT, 4, Lothbury, on or before the 18th of SEPTEMBER next.—For further particulars, conditions, and specification for finishing, apply to Messrs. HOLY and CARTWRIGHT ; Mr. ROBINS, Piazza, Covent-garden ; and Mr. SAMUEL FIELD, Architect and Surveyor, 14, Beaufort-buildings, Strand. The highest Tender not necessarily accepted.

TO BUILDERS, CARPENTERS, AND OTHERS.

TO BE SOLD, the GOODWILL of an old-established BUILDER'S BUSINESS, employing on an average thirty men, in a good situation in the county of Hertfordwelve miles from town. The stock could be taken at a valuation, or would be sold by auction on the premises, if declined by the present occupier. The premises comprise convenient eight-roomed house, with good garden, &c. yard and workshops, stable, &c. four-stall stable and cart-lodge, &c. Rent, 30l. per annum. Reason for selling, the present owner being the freeholder.—For further particulars and terms, apply to Mr. W. R. GILBERT, Auctioneer, &c. 41, Charing-cross.

WANTED, a PLOT of LAND, 40 or 50 feet frontage, and 200 feet deep, not exceeding a mile from the Sudbury or Willesden Stations. Address, stating terms, to F. W. 19, Soho-square.

FREE RAILWAY TICKETS.—ENFIELD ESTATE.—IMPORTANT to BUILDERS.—The head of every house built upon the Waddington Estate, of the value of 50l. per annum, will be entitled to a Free First-class Railway Ticket ; and of every house of the value of 40l. per annum, will be entitled to a Free Second-class Railway Ticket, for fourteen years.—Apply to Mr. GEORGE MORGAN, 5, Chancery-lane.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find every supplies upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath and Yorkshire Block Stones, always in stock ; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Bros.) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the Fields ; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, September 8, 1855.

J. TURNER, Hon. Secretary, 15, Wilton-street.

COMPETITIONS.

TYNEMOUTH CEMETERY.—The Burial Board for the Parish of Tynemouth offer the following PREMIUMS, viz.:—1. For the best set of DESIGNS for an EPISCOPAL CHAPEL, a DISSENTERS' CHAPEL, LODGE, OFFICE, and necessary accommodations; Gardener's Cottage, and Entrance-gates, accompanied by estimates. The cost to range from 1,500*l.* to 2,000*l.* Thirty Guineas. The architect whose design shall be approved will be required to furnish all detailed specifications and working drawings necessary for the construction of the works, and to find a contractor willing to perform the work for the sum named in the report and estimate accompanying the plans. In case none of the designs be adopted, and the specifications and working drawings in consequence be not required, only one-half of the above premium will be given. 2. For the best plan and estimate for LAYING OUT, PLANTING, and ORNAMENTING the ground, 40 acres in extent, keeping in view the preservation of the outage of the grass on such portions of the land as may not be required for purposes of interment. Ten Guineas.—A lithographed plan of the site, with the levels marked thereon, may be obtained, on payment of 5*s.* at the Town Surveyor's Office, Norfolk-street; and further information obtained there, or at the Town-clerk's Office, Howard-street, Tynemouth. The plans, designs, and estimates, to be sent to the Town-clerk's Office on or before THURSDAY, the 27th instant.

THOS. C. LIETCH, Clerk.

Borough of Tynemouth, September 5, 1855.

TO ARCHITECTS AND OTHERS.

THE GUARDIANS of the WHITECHAPEL UNION are desirous of receiving PROPOSALS from Architects as to the terms upon which they would supply PLANS for the ERECTION of a new WORKHOUSE, with necessary offices, upon the site of the present establishment in Charles-street, Mile-end, New town, to contain 900 adult poor persons, male and female, but which works may be only partially required to be carried out. The Guardians will meet their Boardroom in the Workhouse, in Whitechapel-road, on TUESDAY, the 18th SEPTEMBER instant, at SIX o'clock in the Evening, to receive answers to the above. Further particulars may be obtained and a plan of the ground seen at the Office of the Clerk, No. 40, Leman street, Goodman's-fields.

By order,
W. J. RUDGE, Clerk to the Guardians.

September, 1855.

CONTRACTS.

Royal Engineers' Office, Portsmouth, August 28, 1855.

TO BUILDERS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 24th day of SEPTEMBER, 1855, from such persons as may be willing to enter into a contract with the Ordnance for the ERECTION of proposed OFFICERS' QUARTERS, MESS ESTABLISHMENT, and SOLDIERS' BARRACKS, at Winchester Barracks, county of Hants, agreeably to the plans and specifications to be seen by applying at the Royal Engineers' Office, Portsmouth, every day (Sundays excepted) until the 22nd SEPTEMBER, 1855, and where also Forms of Tender may be obtained.

N.B.—The Ordnance reserve to themselves the right of rejecting all or any of the Tenders.

NOTICE to GAS CONTRACTORS and BUILDERS.—ORDNANCE CONTRACT.

Office of Command Royal Engineer in Ireland, Dublin, 8th September, 1855.—ERECTION of GAS WORKS and all APPARATUS appertaining thereto, with Street Mains, Pipes, External and Internal Fittings, and supply of GAS, for the Temporary Barracks on the Curragh of Kildare, in the Dublin district.—The Commanding Royal Engineer in Ireland will receive TENDERS for the above services, at his Office, in the Castle, Dublin, on any of the following conditions:—

Form 1.—For the ERECTION of a GAS MANUFACTORY, with all necessary apparatus, street mains, pipes, public lamps, &c. &c. and for supplying and fixing all internal fitments, burners, &c. &c. only, as per plans and specification, the whole to be the property of the Government, but the contractor to engage to work the manufactory for the first four months after completion, supplying all necessary superintendence, labour, and material at his own cost and charges, and furnishing the gas at an agreed price of (as per) so many feet.

Form 2.—For the ERECTION of a GAS MANUFACTORY, with all necessary apparatus, street mains, pipes, public lamps, &c. &c. and for supplying and fixing all internal fitments, burners, &c. &c. only, as per plans and specifications, the whole to remain the property of the contractor; but the contractor to engage to supply all gas required at a fixed price per 1,000 feet the price to be named in the Tender, and the Government to have the option at any time of purchasing the manufactory and all its apparatus, street mains, pipes, and public lamps, at a price to be named in the Tender, which also to state sum for gas fittings.

It is also admissible for any person to Tender for the above services according to their own plans and specifications, which will be considered at the same time as the Tenders which may be received on the prescribed forms. The Government reserve to themselves the right to reject any or all of the Tenders. Persons desirous of Tendering for the above work will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin, and at the Commanding Royal Engineer's Offices, at Manchester and Glasgow, where they may see the drawings, and obtain specifications, with the terms of contract. The period to be stated in letter of Tender within which contractors engage to complete the work, subject to terms of contract, Art. 1, &c. On this point a preference will be given in consideration of the offers. The letter of Tender to be sealed, and transmitted under cover to "The Commanding Royal Engineer in Ireland, Lower Castle-yard, Dublin," so as to be received on or before the 27th day of SEPTEMBER, 1855; and to be marked on the outside, "Tender for Gas Works at the Curragh of Kildare."

CONTRACTS.

Royal Engineer's Office, Portsmouth, August 28, 1855.

TO BUILDERS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 24th day of SEPTEMBER, 1855, from such persons as may be willing to enter into a CONTRACT for the ERECTION of WATER TANKS, with supply pipes, pumps, &c. at Albany Barracks, Isle of Wight, agreeably to the plans and specification, to be seen by applying at the Royal Engineer's Office, Portsmouth, every day (Sundays excepted), until the 22nd day of SEPTEMBER, 1855, and where also Forms of Tender may be obtained.

N.B. The Ordnance reserve to themselves the right of rejecting all or any of the Tenders.

Royal Engineer Office, Portsmouth, Sept. 6, 1855.

TO BUILDERS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before FRIDAY, the 21st SEPTEMBER, 1855, before TEN o'clock, a.m. from such persons as may be willing to enter into a CONTRACT for the ERECTION of a CONCRETE COUNTERSCARP WALL, COAL STORES, and FORMING GLACIS, proposed to be erected at Fort Victoria, Freshwater, in the Isle of Wight, agreeably to plans and specifications to be seen at the Royal Engineer Office, Portsmouth, every day (Sunday excepted), until the 20th day of SEPTEMBER, 1855, and where also forms of Tender may be obtained.

N.B. The Ordnance reserve to themselves the right of rejecting all or any of the Tenders.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.

—Commanding Royal Engineer's Office, Dublin, 8th SEPTEMBER, 1855.—The Principal Officers of Her Majesty's Ordnance hereby give Notice, that they will receive PROPOSALS for the following CONTRACT, viz.:—For the FORMATION and CONSTRUCTION of about TEN MILES of ROADS, at the Temporary Barracks on the Curragh of Kildare, in the Dublin District. Persons desirous of tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin; and may obtain specifications and the terms of contract, upon making a deposit of 2*l.* for the same, which deposit will be repaid when the specifications are returned uninjured. Contractors to state the period within which they engage to complete each portion of roads, numbered 1, 2, and 3, in letter of Tender. The letter of Tender to be sealed and transmitted under cover to "The Director-General of Contracts, Ordnance Office, Pall-mall, London," so as to be received on or before the 24th day of SEPTEMBER, 1855; and to be marked on the outside, "Tender for Roads at the Curragh of Kildare." Parties may Tender for either of the portions numbered 1, 2, and 3, in letter of Tender, or for the whole.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.

—Commanding Royal Engineer's Office, Dublin, 6th September, 1855.—The principal Officers of Her Majesty's Ordnance hereby give Notice, that they will receive PROPOSALS for the following CONTRACT, viz.:—For the CONSTRUCTION and ERECTION of NINETEEN WOODEN BUILDINGS for officers, Staff-sergeants, &c.; and THREE IRON BUILDINGS for Gun and Forage Sheds, &c. at the temporary Barracks on the Curragh of Kildare, in the Dublin district. Persons desirous of Tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin, and may obtain specifications, with the terms of contract, upon making a deposit of 1*l.* for the same, which deposit will be repaid when the specifications are returned uninjured. The period to be stated in letter of Tender within which contractors engage to complete the buildings.—The letter of Tender to be sealed, and transmitted, under cover, to "The Director-General of Contracts, Ordnance Office, Pall-mall, London," so as to be received on or before the 18th day of SEPTEMBER, 1855, and to be marked on the outside, "Tender for Work at the Curragh of Kildare."—Parties may Tender for the Erection of the Nineteen Wooden Buildings, for the Three Iron Buildings, or for the whole.

NOTICE to CONTRACTORS.—The

Londonderry Port and Harbour Commissioners not having yet selected an Engineer to conduct the proposed works, notice is hereby given, that the TIME for RECEIVING TENDERS is further EXTENDED to the 8th inst.: and Tenders invited for the execution of the Public Quay, Jetty, and &c. according to the plans and specifications to be seen at the Office of the Commissioners, and at Messrs. D. and T. STEVENSON'S Office, in Edinburgh. Tenders may be made for the whole or a portion of the works. Tenders to be sealed, and addressed to the Secretary to the Commissioners, and endorsed with the words, "Tenders for Quay, &c." and to be delivered at my office on or before the 8th inst. at FOUR o'clock p.m. The Commissioners do not bind themselves to accept the lowest or any of the Tenders.

A. H. STEWART, Secretary.

Port and Harbour Office, Londonderry, Sept. 4, 1855.

Office of Commanding Royal Engineer, Dublin, 6th Sept. 1855.

ORDNANCE CONTRACT.—The Commanding Royal Engineer in Ireland, hereby gives Notice, that he will receive PROPOSALS for the following contract, viz. For the SUPPLY of MATERIALS and LABOUR necessary for DEODORISING and CLEANSING Water PRIVIES, by means of peat charcoal or other efficient deodorizer, and the removal of all privy soil, ashes, refuse, straw, manure, &c. together with full requisite cleansing of the urinals and hog-pits, at the temporary barracks, Curragh of Kildare, for the term of three years, ending 31st March, 1858, but determinable at any period after one year, on either party giving to the other three months' notice in writing. Persons desirous of Tendering for the same will receive every information, and forms of Tender, on application at the Office of the Commanding Royal Engineer, Lower Castle-yard, Dublin, or at the Royal Engineer Office at the Curragh. The Tender to be sealed and transmitted under cover to the Commanding Royal Engineer in Ireland, Ordnance Office, Lower Castle-yard, Dublin, so as to be received on or before the 19th day of SEPTEMBER, 1855, and to be marked on the outside "Tender for Cleansing at Curragh Camp."

[For remainder of Contracts see next page.

CONTRACTS.

ORDNANCE CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.—See ADVERTISERS, address to Major Henderson, THEODORE SMITH, R.E. Commanding Royal Engineer, Aldershot, and endorsed "Barracks," "Tenders for deepening Wells at Aldershot Camp," will be received at the Royal Engineer Office, Aldershot, not before MONDAY, the 24th inst. from parties willing to CONTRACT for DEEPENING WELLS at the TEMPORARY BARRACKS at ALDERSHOT, Hants. A specification and forms of Tender may be obtained on application at the Royal Engineer Office, Aldershot.

Royal Engineer Office, Aldershot, 8th September, 1855.

METROPOLITAN COMMISSION of SEWERS. To BUILDERS, CONTRACTORS and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 25th day of SEPTEMBER inst. at ONE o'clock precisely, to receive sealed TENDERS from persons willing to CONTRACT for the LAYING, CONSTRUCTING, and COMPLETELY FINISHING the following WORKS, viz.:—

1,200 Feet in length, or thereabouts, of brick sewer, with other works in connection therewith, in Marlborough-road and Cumberland-place, Chelsea, and Old Brompton, lane, in the county aforesaid (in one Tender).

500 Feet in length, or thereabouts, of brick sewer, with other works in connection therewith, in Wellington-road and Gravel-lane, to form a junction with the sewer in Marlborough-road and Cumberland-place, Chelsea, and Old Brompton, lane, in the county aforesaid (in one Tender).

350 Feet in length, or thereabouts, of brick sewer, with other works in connection therewith, in Lisbon-street, Duke-street, and Hudson's-row, Chelsea, in the county of Middlesex (in one Tender).

1,150 Feet in length, or thereabouts, of brick sewer, with other works in connection therewith, in Lisbon-street, Duke-street, and Hudson's-row, Chelsea, in the county of Middlesex (in one Tender).

Also for the future maintenance of such works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained at the principal office of the Commissioners, No. 7, Great Queen-street, Soho-square, between the hours of NINE and FOUR o'clock. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to deposit two sureties for due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square.

Dated this 13th day of September, 1855.

THE ENFIELD LOCAL BOARD of HEALTH are prepared to receive TENDERS for the MAKING or ERECTING a small SEWAGE TANK and APPURTENANCES at the Outfall of the Town Sewer in the parish of Enfield; also for MAKING TWO SLUICE-WINDOWS, with portable Frames, &c. in the same parish.

By order, JOSEPH LOWNDES, Clerk to the Board.

Burslem, 6th September, 1855.

BURSLEM LOCAL BOARD of HEALTH.

CONTRACT No. 2.—The Burslem Local Board of Health are prepared to receive TENDERS from competent persons for the CONSTRUCTION of certain BRICK SEWERS, and for the LAYING of certain EARTHENWARE PIPES and other articles, for the purposes of the drainage works of the district. Duplicate copies of the drawings and specification may be seen, and forms of Tender and quantities may be obtained at the Public Offices, Moorland-road, Burslem, and at the Office of the Engineer, Mr. LEE, 7, Duke-street, Westminster, on and after SATURDAY, the 8th day of SEPTEMBER, 1855; and Tenders must be sent in to me on or before TUESDAY, the 2nd day of OCTOBER, 1855.

By order, JOSEPH LOWNDES, Clerk to the Board.

Burslem, 6th September, 1855.

CONTRACTS.

BOROUGH of BIRMINGHAM. — To SURVEYORS and VALUERS.—The Assessment, Rate, and Appeal Committee of the Council, is desirous of CONTRACTING to make a NEW VALUATION of all the RATABLE PROPERTY within the Borough. Surveyors desirous to Tender may inspect the specifications and obtain all necessary information on application at my Office, on and after the 1st day of SEPTEMBER next. Sealed Tenders, marked "Tender for new Valuation," to be delivered into me on or before the 15th day of SEPTEMBER next. The Committee does not bind itself to accept the lowest or any Tender.

By order, THOMAS STANBRIDGE, Town Clerk.

Temple-street, Birmingham, August 23, 1855.

TO SCAVENGERS, CARTERS, AND OTHERS.

THE KENSINGTON IMPROVEMENT COMMISSIONERS will meet at the VESTRY-HALL, Kensington, on WEDNESDAY, the 19th instant, at ELEVEN o'clock in the forenoon precisely, TENDERS and CONTRACT for CARTING and CARRYING AWAY, from all streets within the Commissioners' District, all the DUST, Dirt, Filth, Road-scrapings, Sweepings of Streets, Mud, Snow and Ice that may be collected together by the Scavengers, and for the Supply of Carts, Horses, &c. for the same.

Mr. JAMES BROADRIBB, the Commissioners' Surveyor, from the 25th day of SEPTEMBER, 1855, to the 29th day of SEPTEMBER, 1856 inclusive, and also to receive Tenders and to Contract for the supply of Horses and Carts, with Carters, at per day and per load. The Commissioners have divided the parish into two districts, which may be viewed by application at the Surveyor's Office, and Forms of Tender and particulars may be obtained on application at the Commissioners' Offices, Vestry-hall, Tenders to be sealed, and to be delivered at the Clerk's Office, Vestry-hall, on or before FOUR o'clock on TUESDAY afternoon, the 25th instant. The Commissioners do not bind themselves to accept the lowest, or any Tender. The expense of the contract to be paid by the contractor.

By order of the Commissioners

Sept. 7, 1855. REUBEN GREEN, Clerk.

TO FLINT MERCHANTS.

CHELSEA IMPROVEMENT ACT.—The Commissioners for Paving, Lighting, Cleansing, Regulating, and Improving the Parish of St. Luke, Chelsea (exclusive of the district of Hans Town), will meet in the Board-room at the Manor-house, King's-road, Chelsea, on TUESDAY, the 25th inst. at ELEVEN o'clock in the forenoon precisely, to receive TENDERS from persons willing to contract for a period of one year, from Michaelmas-day next, pursuant to the terms of a draft contract, now lying at the Office of the Surveyor to the Commissioners, for SUPPLYING the said Commissioners with the best clean grey or kentish ROAD-FLINTS, free from loam for the repair of the roads within their jurisdiction, at per cubic yard, to be delivered alongside of the free dock adjoining Bute-st's Wharf, Chelsea-reach, Chelsea, in such quantities as may be ordered and required from time to time by the Commissioners or their Surveyor and a sample of such flints may be seen and now on view at the Surveyor's Office. The quantity required will be about 3,000 cubic yards, more or less. Sealed Tenders, endorsed "Tender for Broken Flint Road-stone," and signed by the party Tendering, with the names and description of two sufficient sureties to be approved of for the due performance of the contract, are to be left at the Office of the Clerk to the Commissioners, Manor-house, King's-road (and not elsewhere), on or before the 24th inst; but the Commissioners do not bind themselves to accept the lowest or any Tender so delivered. The legal charges of the contract to be paid by the contractor, and the parties tendering must appear personally on the day the Tenders are opened. Printed forms of Tender (to be filled up) may be obtained at my office, and no others will be received except by order of the Board.

JOSEPH PATTISSON, Surveyor,

7, Beaufort-terrace, King's-road, Chelsea.

Dated this 13th day of September, 1855.

PARISH of ST. LUKE, CHELSEA.—CONTRACT for DUST, &c.—To DUST CONTRACTORS. CHELSEA IMPROVEMENT ACT. The Commissioners for Paving, Lighting, Cleansing, Regulating, and Improving the Parish of St. Luke, Chelsea (exclusive of the District of Hans Town), will meet in the Board-room, at the Manor-house, King's-road, Chelsea, on TUESDAY, the 25th instant at ELEVEN o'clock in the forenoon precisely, to receive TENDERS from persons willing to CONTRACT for a period of one year, from Michaelmas-day next, pursuant to the terms of a draft contract now lying at the Office of the Surveyor to the Commissioners, for COLLECTING and REMOVING the DUST, ASHES, FILTH, and RUBBISH which are to be the property of the contractor, from the several houses in the streets and places under the jurisdiction of the Commissioners. Twenty persons are to enter into a sum hereafter to be paid on the approval of the Tender, and a further sum, to make up a moiety of the sum offered to be paid at the time of signing the contract, within three days after, and the remaining moiety on the 12th of March next. Sealed Tenders, endorsed "Tender for Dust and Ashes," and signed by the proposed contractor, with the names and descriptions of two sufficient sureties to be approved of for the due performance of his Contract, are to be left at the Office of the Clerk to the Commissioners, Manor-house, King's-road (and not elsewhere), on or before the 24th instant, by the Tenderers themselves, who are required to the acceptance of the highest or any of the Tenders so delivered. The legal charges for the Contract to be paid by the contractor; and the parties tendering must appear personally on the day the Tenders are opened. Printed Forms of Tender (to be filled up) may be obtained at my Office, and no others will be received except by order of the Board. Dated this 13th day of September, 1855. By order of the Board,

JOSEPH PATTISSON, Surveyor to the Commissioners.

TO BRICKMAKERS, DUST COLLECTORS, AND OTHERS.

THE KENSINGTON IMPROVEMENT COMMISSIONERS will meet at the VESTRY-HALL, Kensington, on WEDNESDAY, the 19th instant, at ELEVEN o'clock in the forenoon, to receive TENDERS, and to CONTRACT for the SALE and REMOVAL of the COAL-DUST, Cinders, Ashes, and Rubbish from the Houses and Premises within the parish of St. Mary Abbots, Kensington, from the 29th day of SEPTEMBER, 1855, to the 29th day of SEPTEMBER, 1856, inclusive. The Contractor will have to enter into a bond, and to provide two sureties for the due performance of his contract. The Contractor must pay immediately one-fourth part of the money offered by him, and the succeeding three payments on the first day of each quarter. The Commissioners have divided the parish into two districts, which may be seen fered for jointly or separately. Forms of Tender and particulars may be obtained on application at the Commissioners' Offices, Vestry-hall. Tenders to be endorsed "Tender for Dust," and to be delivered at the Clerk's Office, Vestry-hall, on or before FOUR o'clock on TUESDAY afternoon, the 25th instant. The expense of the contract and bond to be paid by the contractor. By order of the Commissioners,

Sept. 7, 1855. REUBEN GREEN, Clerk.

BUILDERS desirous of CONTRACTING for the ERECTION of a SMALL DETACHED VILLA, on a plot of freehold land at Tottenham, and willing to let the amount remain on mortgage at six per cent interest per annum, payable half-yearly, may inspect the plans and specifications at Mr. G. MORGAN'S, Architect, 6, Chancery-lane.

TO BUILDERS.

THE COMMITTEE for the BRISTOL DISTRICT of the METROPOLITAN ASSOCIATION for IMPROVING the DWELLINGS of the LABOURING CLASSES, will meet on the 25th inst. at TWO o'clock, to receive TENDERS for the MASONS', CARPENTERS', SMITHS', and PLASTERERS' WORKS, in converting the premises in Christmas-street, lately occupied as Queen Elizabeth's Hospital, into Model Dwellings. The plans and specifications may be seen at the Offices of the Association, 2, Exchange-buildings, or at the Offices of the Architects, Messrs FOSTER and WOOD, 4, Park-street, Bristol, from the 10th inst. till the 25th inst. at or before TWELVE o'clock, on which latter day the Tenders are to be sent, under seal, to the Offices of the Society, endorsed "Tender." The Committee do not pledge themselves to accept the lowest or any Tender.

By order of the Committee,

CHARLES JACKSON, Secretary.

2, Exchange-buildings, All Saints'-lane, Bristol,

September 5th, 1855.

CONTRACTS.

TO BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for the ERECTION of a FARM-HOUSE and HOMESTEAD, on a farm in the Parish of Hilston Martell, Dorset, for the Right Hon the Earl of Shaftesbury, may see the plans and specifications at the Office of Messrs DENTON and DRAKE, 60, Parliament-street, Westminster; and at the Bull Inn, St. Giles, on and after the 17th SEPTEMBER. Applications may also be made to R. S. WATERS, Esq. of St. Giles. Tenders to be forwarded to Messrs. DENTON and DRAKE on or before the 8th of OCTOBER.

EXTENSION OF TIME.

THE TIME advertised for receiving Tenders for the Farm-house, Homestead, and twelve double Cottages, in the Parish of St. Giles, will be EXTENDED from the 22nd to the 29th SEPTEMBER.

18th September, 1855.

THE BURIAL BOARD for the PARISH of GREENWICH, Kent, are prepared to receive TENDERS for the ERECTION of a NEW BRICK WALL and IRON PALISADING, for the east and west boundaries of the NEW CEMETERY recently enclosed, in Kidbrook, near Shooter's-hill; and for Entrance Gates, Carriage, and Foot Gates at the southwest angle, facing Well Hall-lane.—The drawings and specification may be seen at the office of the Architect, Mr. SEWITT, Montague-close, Southwark. Tenders to be sent to the Offices of Mr. E. W. JAMES, No. 14, Burney-street, Greenwich, on or before MONDAY, the 1st of OCTOBER, 1855 at FIVE o'clock. The Board do not bind themselves to accept the lowest, nor any of the Tenders sent in.

E. W. JAMES, Clerk to the Board.

Greenwich, September 13, 1855

THE CONSERVATIVE LAND SOCIETY.

TRUSTEES.

Viscount Ranelagh

Right Hon R. A. Christopher, M.P.

Hon Col Lowther, M.P.

J. C. Cobbold, esq. M.P.

TO ROAD CONTRACTORS &c.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS in the SECOND PORTION of the ROUND-HILL PARK ESTATE, Brighton, East Sussex. The drawings and specification may be seen at the Offices of the Surveyor, Mr. GEORGE MORGAN [or duplicates of the drawings and specification, may be seen at the Allen Arms Inn, Lewes-road, Brighton], on and after MONDAY, SEPTEMBER 17, 1855, between the hours of TWELVE and FOUR. Tenders are to be sent in on or before TWELVE o'clock on MONDAY, OCTOBER 1, addressed to the Surveyor, and indorsed "Tenders for Roads, &c. Round Hill Park Estate." The Executive Committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN.

33, North-st. Strand

TO BUILDERS and OTHERS.—Notice is hereby given, that plans and specifications for BUILDING a NEW CHURCH at CROYDON, in the county of Surrey, diocese of Winchester and province of Canterbury, will be lying at Mr. E. W. WRIGHT'S, Parish Clerk, Tamworth-road, Church-street, Croydon, on Monday, the 17th instant, and twelve following days; and all persons desirous of contracting for the execution of the works must send in sealed Tenders on or before SATURDAY, the 6th of OCTOBER, directed to H. WOODYER, Esq. 30, North-street, Guildford. The lowest Tender will not of necessity be accepted.

NOTICE to BUILDERS.—The Burial Board for the Parish of Hadleigh, in the county of Suffolk, are desirous of receiving TENDERS for ERECTING TWO CHAPELS, ENTRANCE-LODGE, and GATES, on their new Cemetery, and also for enclosing the ground with a dwarf wall. The plans, specifications, and forms of tender may be seen at my Office until the 24th inst. on which day Tenders must be sent to my Office before TWELVE o'clock at noon, addressed to me, sealed and endorsed "Tenders for Cemetery Works." Bills of quantities may be obtained on application to the Architect, EDWIN G. PINNINGTON, Esq. 9, Newman-street, London, on or before the 22nd instant. The Board will not pledge itself to accept the lowest, or any Tender.

J. F. ROBINSON, Clerk to the said Burial Board.

Hadleigh, Suffolk, Sept. 11, 1855.

CHELMSFORD NEW CORN EXCHANGE.—To BUILDERS.—Any person willing to TENDER for the ERECTION of the NEW CORN EXCHANGE, on the site of the OLD INN, in the High-street, may see the plans and specification at Mr. FENTON'S office, Tindal-square. Tenders sealed and endorsed "Tenders for Exchange," to be sent to the Office of RICHARD LANE, Esq. on or before FRIDAY, the 28th instant. The Committee do not pledge themselves to accept the lowest or any Tender.

FARINGDON, BERKS.—Notice is hereby given, that the Inspectors of the town of Faringdon, Berks, appointed under the provisions of an Act of 3 & 4 William IV. for the lighting and watching of Parishes in England and Wales, are ready to receive TENDERS for LIGHTING the PUBLIC LAMPS of the said Town with COAL GAS, or otherwise, for One Year, from the 1st day of OCTOBER next, on or before which day sealed Tenders must be delivered to me, of whom full particulars may be known on application.

GEO. F. CROWDY, Clerk.

Faringdon, 3rd September, 1855.

TO CONTRACTORS AND BUILDERS.

THE Directors of the London, Brighton, and South Coast Railway Company are prepared to receive TENDERS for the ERECTION of sundry BUILDINGS at the Brick-layers' Arms Depôt on the Kent-road, Bermondsey, the Brick-layers' Arms Depôt on the Kent-road, Bermondsey, consisting of thirty-six horses, smithy, engine and boiler houses, granaries hay and corn stores, &c. The drawings and specification may be seen at the Engineer's Office, London-bridge Terminus, and after MONDAY, the 17th instant; and Tenders must be sent in to the undersigned before TEN o'clock on the morning of THURSDAY, the 27th instant.

FREDERICK SLIGHT, Secretary.

London Terminus, Sept. 13th, 1855.

TO CARPENTERS, BUILDERS, BOX-MAKERS, and OTHERS.—FOR SALE, a new Hand-power CIRCULAR SAW-BENCH, on an improved principle. One man can turn it to cut 3-inch stuff. Price 22l. To be seen at work at No. 6, Tyers-street, Lambeth-walk.

THOMAS EDINGTON, PURCHASER and INSPECTOR OF CASTINGS on COMMISSION, 17, GORDON-STREET, Glasgow.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporising) with all the improvements, under their Quadruple patents of 1846 51-54 and 1855 including their Gunpowder Proof Solid Lock and Door Bolts, which make a safe indeed.

THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.

MILNER'S PHŒNIX LIFE SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47a, Moorgate-street, City.—Circulars free by post.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE, Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and STEWART'S PATENT CAST-IRON GAS and WATER PIPES; Office, No. 7, Sise-lane, London.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street,

Have made important additions to their original Invention of PATENT PANELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, the main features of which are shown in the Engravings.

A represents the Patent Halter-guide and Collar-rein, the fall of which is taken to the back of the manger-works with freedom and ease up or down the guide bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C The Seed-box detached, made of galvanized sheet-iron lightand durable.

D The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and inexpensive to the public. Manufactured plain, galvanized, and japanned.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for Cloth Plans and Ornamental Castings, and every description of Wrought and Cast-Iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Straw Fencing, &c.

Estimates and Catalogues on application.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.

Castings Warehouse removed from 81 to 88, Upper Thames-street.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent.—Mr. BARRETT, 13, York-buildings, Adelphi.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE. Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat.

COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"Gentlemen, We have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fire-proof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

No. 1081, Class 8, Section 16, BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

TO ARCHITECTS, BUILDERS, AND THE TRADE.

PATENT PLUMBIC ZINC.

GREAT REDUCTION IN PRICE.

PLUMBIC ZINC is a perfect combination of Lead and Zinc, and not requiring to be more than one-fourth or one-fifth as thick as Sheet Lead, is consequently very much cheaper than that material, and at the reduced price costs but little more than Sheet Zinc.

No. 11 gauge weighs about 18 oz. per foot super.
" 12 " " 20 "
" 13 " " 23 "
" 14 " " 26 "

Full particulars and the reduced price sent by post on application to

A. MOREWOOD and CO. DOWGATE-DOCK, LONDON.

to whom all letters may be addressed.

LIVERPOOL and MANCHESTER PATENT GALVANIZED IRON WORKS.—FRANCIS MORTON and CO. Galvanized Sheet Iron of the best quality, cut to order, expressly prepared for Tinning and Re-zincs. Corrugated Sheets, Painted or Galvanized, of all sizes, for Roofing, Fire-proof Partitions, Ceilings, &c. always kept in Stock. Gas and Water Tubing, Rain-water Gutters and Pipes; Wire of all numbers; Nails, Screws, Spikes, Hoops, &c.; Wrought Iron Hurdles, Field Gates, &c. An allowance to Shippers and the Trade.—Head Offices, 14, James-street (late of Paradise-Company's Premises), Liverpool, and at 18, St Mary's-gate, Manchester.

N.B. Parties are particularly requested to note the address, LIVERPOOL.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.

PLAIN, CORRUGATED, PAINTED, or GALVANIZED.

Estimates and Drawings furnished on application.

Experienced Workmen sent to all parts of the Country.

3, MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON; BERKLEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON,

For Roofs, Flats, Cisterns, Gas Tubing, Gutters, Pipes, Fencing, &c.

To be obtained only at

TUPPER and CARR'S WAREHOUSES, REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; or BERKLEY-STREET, BIRMINGHAM.

Sheets, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coal-scoops, Buckets, Pumps, &c. always in Stock.

LONDON OFFICE 1, RICHES-COURT, LIME-STREET.

A. MOREWOOD and CO. (late Morewood and Rogers), Dowgate Dock, Upper Thames-street, London, and Baskerville Works, Birmingham,

PATENT GALVANIZED TINNED IRON, and GALVANIZED IRON, in Sheets, PLAIN or CORRUGATED, and Curved, of all Gauges

Manufactured articles always kept in stock, such as pails, scoops, bowls, riddles, skips, &c. of all sizes.

Also the Patent Galvanized Tinned Iron Pipe, Gas and Water Tubing, Stamped and Moulded Gutters, Wire, Wire Netting, Hoopiron, Nails, Rivets, &c.

Estimates given for Roofs, and every description of Galvanized Building, at the

OFFICES and WAREHOUSE, DOWGATE DOCK, LONDON.

SKAIFE'S GALVANIZING WORKS, Commercial-road, Limehouse, London.

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form.

Sheets plain and corrugated.—Roofs fixed complete.

J. Skaife is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles.

An Allowance to the Trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

PATENT CORRUGATED IRON.—JOHN WALKER, Manufacturer of Roofs, Railways, &c. &c. Works, Mill-wall, Poplar. Offices—Arthur-street West, London-bridge.

PATENT GALVANIZED IRON.—JOHN WALKER, Galvanized Iron Merchant, &c.—The trade supplied by corrugating by steam power, cut to any size, and delivered to any part of the kingdom, at the shortest possible notice.

IRON-FOUNDER, &c.—JOHN WALKER, Iron-founder and Engineer.—Orders to any extent can be executed at his Works, Mill-wall, Poplar, on the Thames.

BUILDER and CONTRACTOR.—JOHN WALKER, having his own Saw-mills, is enabled to CONTRACT for BUILDERS' WORK, at low prices, and to deal with no ill work. Apply at his Offices, Arthur-street West, London-bridge.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superior article of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire proof. Drawings and estimates furnished.

Island Foundry and Iron-works, Millwall, London.

Offices, 12 Fenchurch-street, City.

PATENT GALVANIZING and CORRUGATING IRON WORKS (Improved Process).

WORKS—GLASS-HOUSE YARD, opposite the Entrance to the London Docks.

GALVANIZED SHEET-IRON and WIRE of every description superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.

ESTIMATES given for IRON ROOFS, Corrugated Sheds, Houses, &c.

A Discount allowed to the Trade.

KIMBERLEY'S PATENT FLOORING CRAMPS, Scaffolding Brackets, Door Springs, Mortising Machines, Cement Pugmills and Sieves, Skylight Screws, &c. &c. Also, KIMBERLEY'S PATENT GAS STOVES, may be had from any Ironmonger in town or country; from the Patentee, Luge-street, Birmingham; or from the London Agents, Messrs. PUGH and CO. 13, King-street, Snowhill, where a stock is kept.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Welling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

TO ARCHITECTS AND BUILDERS.

PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any bank, public building, or business establishment in the Kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at 6d. per shilling the foot.

R. S. NEWALL and CO.'S Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.

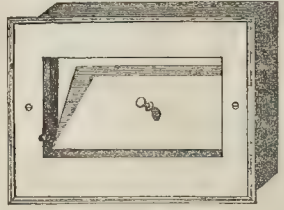
HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and open fronts, stoves and ranges, ovens and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, brough-pipe, and the latest prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron bridge.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 43, Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and CO. opposing to the Monument, London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEPRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public halls, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing at the same time perfect ventilation. To be seen in action at DEPRIES'S Office, 145, Regent-street, London.



HEATING BY HOT WATER.
JOHN WEEKS and CO., King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

DEELEY'S PATENT SELF-ACTING FURNACE, for melting pig-iron. A saving of 66 per cent. in fuel from the ordinary method. Furnaces can be erected to produce from one to ten tons of molten iron per hour, as may be required. For particulars apply to Mr. R. L. CURTIS, Surveyor, 1, Riches-court, Lime-street, City.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.
This invention is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.
Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. PRANGIS, BROTHERS, Nine Elms, London.
Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

ESTABLISHED 1817.
WILLIAM HARMER'S Smiths' Works, Stove and Range Manufactory, and Ironmongery, Metal, and Zinc Warehouse, 19, Horseferry-road, and 1, New Peter-street, Westminster.—Contractors, Builders, &c. supplied with General Ironmongery at the lowest wholesale prices.

IRONMONGERY.
PFEIL AND STEDALL.
THE LARGEST STOCK AT
THE LOWEST PRICE,
5 AND 6, BROAD-STREET, BLOOMSBURY.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

LIGHTING of CHURCHES.—F. SKIDMORE and SON, Coventry.
The unsightly fittings for gas and candles which so frequently disfigure our churches have induced F. & Skidmore to devote much time to the production of such as may harmonise with the characteristics of the buildings. The designs are founded on personal study of the remains of ancient metal-work on the continent and in England.
F. S. and Son would refer to their works for lighting Chester Cathedral, S. Botolph's, Boston; S. Mary's, Newark; S. Michael's, Coventry; S. John's, Ladywood; and Aston, Birmingham, Bowden, near Manchester, &c.; as also to the following testimonials:—
"We went over the manufactory of Messrs. Skidmore, in Coventry, and were much pleased by the artistical spirit which animates them. A long list of churches and other large buildings lighted by them show their endeavours are duly appreciated."—*Builder.*
"These rising artists show considerable taste; we shall watch their progress with great interest."—*Ecclesiologist.*
"Mr. Skidmore must be considered an artist of great attainment and no mere pretender."—*Morning Chronicle.*
Where limited funds render economy necessary, F. & S. has prepared designs of a simple and inexpensive character. They have gas standards, &c. finished ready for immediate use.
Sketches, with estimates, sent free by post.

NAILS and IRONMONGERY, from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, &c.
THE following are the PRESENT PRICES of PATENT SASH LINE:—
No. 3 4 5 6
4s. 5s. 6s. 3d. 7s. 6d. per gross.
At JOHN YOUNG'S, Birmingham and Wolverhampton, Agent, Factor, and General Ironmonger, 18, Blandford-street, Manchester-square, running out of Baker-street, Portman-square. Every other article equally reasonable.

METALLIC PROTOXIDE PAINT.—This Paint has been in extensive use and severely tested on the Great Western, North and South Western, Midland, York and North Midland, and other railways; the new Houses of Parliament, British Museum, East-India House, East and West India Docks, &c. The Protoxide Paint unites most intimately with iron, preventing oxidation, and rendering it equal to galvanized. It is of great value when applied to iron vessels, roofs, steam and water pipes, and their joints, and for coating the inside of sugar moulds. It is not affected by foul air or gas of any kind, and dwelling-houses, hospitals, &c. can be painted during occupancy, without the least risk to the health of the inmates. It preserves wood from decay, and will be found effectual in preventing discolouration on stuccoed buildings, and keeping out all dampness.
D. and G. BRYMNER, Agents for Scotland.
Greenock, August 1st, 1855.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.
The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.
The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. R. MORLEY and CO. and by the Company's Grinding Agents, in London, Messrs CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; FREDERICK BRADY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool, by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 28, and 98 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.
The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.
For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO. Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR CHARLES LEMON, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing the Pump Service is now in use, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

LOOKER'S PATENT TUBULAR VENTILATOR is the CHEAPEST and most ORNAMENTAL yet introduced for effectually admitting pure air without a perceptible draught. Decorated to suit any building or apartment.—Prices and prices may be obtained, and specimens seen, at the Office of Mr. J. PATMAN, Architect, 4, Serjeant's-inn, London; or on application to BENJAMIN LOOKER, jun. Patentee, Kingston-on-Thames.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 60, 100, 150, and 200 gallons per diem, will be found ample for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

DRAINAGE of LAND.—WANTED, to undertake the DRAINAGE of LAND by CONTRACT, or to erect temporary Tileries, in order to supply Drain-pipes at a reasonable price.—J. JOHNSON, Drainage Engineer and Contractor, Abingdon-street, Westminster.

LOANS, at Five per Cent. in connection with Life Assurance, on personal security, for one, two, or three years, repayable by instalments.—ENGLISH and FOREIGN LIFE ASSURANCE OFFICE, 135, Oxford-street.

MONEY on LOAN, at 3l. per Cent. per Annum.—ARNEWAY'S CHARITY.—NOTICE IS HEREBY GIVEN, that the Trustees of this Charity are enabled to lend out the Trust Moneys to poor occupiers or traders resident within the City and Liberty of Westminster, that is to say, within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James, St. Martin-in-the-Fields, St. Mary-le-Strand, and St. Paul, Covent-garden. The amount of each loan is not to exceed 100l. is to clear interest after the rate of 3l. per cent. per annum, and is to be secured by the bond of the borrower, with two sureties. Printed Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's Park.
By order, EDWARD S. STEPHENSON, Clerk and Solicitor to the Trustees.
NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been sent in one clear week at the least before the first day of the month.—The sureties must be unexceptionable.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 3 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, as manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

Prepared Flooring, Veneers, &c. at equally low prices.		

A list forwarded on application.

Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING of all descriptions. Also an extensive stock of Dry White, Yellow, and Pine Cut Stuff, Slating, Battens, Pantile Laths, Oak Plank, Sash Cills, &c. Timber of all kinds, Planks, Deals, and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

A CORN TIMBER WHARF.—AT RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and cut deals, slating battens, laths, English oak plank, and sash-sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

MOULDINGS by MACHINERY, to any Design, carefully packed and sent to all parts of the country.—Address, E SIMMS, Sawing, Planing, and Moulding Mills, King's-road, Chelsea, and Wilton-road, Pimlico.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments, tombs, an l every description of marble and stone work also manufactured by patent machinery. NEW WORKS, No. 9, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 100 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by enclosing six postage-stamps.—Please note the address—No. BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

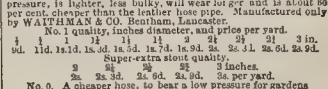
MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

PADDINGTON TIMBER-YARD.—SAWING, PLANING, and MOULDINGS.—3, Irongate Wharf, Praed-street, Paddington, and 96, St. John's-wood-terrace, St. John's-wood.—GEORGE WILLIAM FRY begs to draw attention to his large stock of SEASONED and PREPARED WOOD GOODS, at the lowest current prices. Liberal allowance for cash, and facility for immediate despatch by rail or canal, which affords every advantage to country as well as town buyers. Illustrated and priced sheets of moulding designs and general price lists of goods forwarded post free on application. Goods free to any part of town, including the various railway and canal stations.

N.B.—Sawing and planing for the trade.

STEPHENS'S STAINS for WOOD. Testimonial to the value of—

"Irongate, Colchester, February 5, 1855.



"Sir,—I have just finished a new church with your oak stain, and I consider it the best adapted for the purpose, being the nearest approach to the real wood of any I have ever used.

"I am, sir, your obedient servant.

"SAMUEL GRIMES, Builder.

"To Mr. Hy. Stephens, 54, Stamford-street, London."

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, to be fetched away and paid for at the time, at C. LEFTWICH'S Lead, Glass, and Colour Warehouse 82, Munster-street, Regent's-park. A large quantity of PAPER-HANGINGS, CHEAP. 20s. per cwt. given for old lead.

HAWKINS'S PATENT BRUSH COMPANY.—Manufactory, 17, College-hill, Cannon-street West, London.—Merchants, Artists, and Others, would do well to buy Hawkins's Patent and other Brushes; their superiority in every respect being now established by use. Prices and full particulars can be had, and samples seen, at my Offices as under, or at the Manufactory as above.—Mr. FRANCIS FORD, 2, Lion-court, Fountney-hill, Cannon-street, London, Sole Agent for London and its vicinity.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 50 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 19, Arundel-street, Strand, and at all Booksellers'.

THE ASYLUM LIFE ASSURANCE OFFICE, 72, CORNHILL, LONDON.

Established 1824.

Policies on healthy and diseased lives, at home and abroad, for civil, military, and naval employments.

The only Office on purely proprietary principles, involving therefore no partnership among policy-holders.

For prospectuses, proposal papers, &c apply to

MANLEY HOPKINS, Resident Director.

SECURITY TO EMPLOYERS

THE TIMES ASSURANCE COMPANIES,

To Clerks and others guaranteed at the lowest rates.

Plate Glass Assurance.—Windows, mirrors, &c. Insured against breakage.

Every description of life and fire assurance.

Apply to the Manager, 39, Ludgate-hill.

THE OBJECTS MOST TO BE DESIRED IN EFFECTING A LIFE ASSURANCE.—These are, Perfect Security and the Largest Benefits in proportion to the Contributions paid. They are both fully attained in the SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY, which is now of twenty four years' standing and possesses accumulated funds, arising from the contributions of members only, to the amount of £10,854 and has an annual revenue of £63,394.

The MUTUAL PRINCIPLE being adopted, the entire surpluses or "Profits," as ascertained triennially, are allocated in addition to the sums assured, and they present a flattering prospect to the members For example: the sum now payable on a policy for £500, effected in 1831, is £1,332 6s 8d, being a return of seventy-one per cent. on the premiums paid on middle-aged lives, and policies effected in later years are similarly increased.

The NEXT TRIENNIAL DIVISION of PROFITS will take place on 1st MARCH, 1856, and policies effected previously will receive one year's additional bonus over those opened after that date.

ROBT. CHRISTIE, Manager.

WM. FINLAY, Secretary.

Head Office—26, ST ANDREW-SQUARE, EDINBURGH.

Office in London 126, BISHOPSGATE-STREET.

Agent—WILLIAM COOK.

"The finest we ever saw."—*Art-Journal.*
"Unequalled for beauty."—*Morning Advertiser.*
"Superior to anything yet produced."—*Morning Herald.*
"Invaluable aid to intellectual progress."—*Globe.*
"One of the wonders of the age." *Britannia.*
"Of inestimable value to the fine arts"—*Sir David Brewster.*

SAFE and PROFITABLE SPECULATION. TO BE DISPOSED OF immediately, a very valuable BUILDING AGREEMENT direct from the freeholder, partly executed (some of the houses are completed and occupied) including some houses now in progress, together with the scaffolding, wood, stone, &c. The advertiser being engaged in another business at a distance requiring all his time, will deal liberally, regardless of the value, with a prompt purchaser.—Apply to Mr. GLASIER, Auctioneer, 41, Charing-cross.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, holding a large number of patents relating to the construction and reparation of the permanent way of railways, are at all times ready to communicate on the subject, and to grant licenses for their use. From the facilities thus afforded to companies to negotiate for a number of inventions, much trouble and chance of litigation is avoided. The Company undertake arrangements for bringing new inventions on the subject before the public, upon terms advantageous to the proprietors of patents.—Applications may be made to CHARLES MAY, F.R.S. the Manager; or to

WILLIAM HOWDEN, Secretary.

The Builder.

VOL. XIII.—No. 658.

EASTBOURNE, in Sussex, has long been creeping into favour as a watering-place, and is just now so full, that good housing is at a premium. Those who go there for bustle and tea-garden life, would probably arrive at a similar conclusion as Charles Lamb, who writes in his "Margate Hoy," "We have been dull at Worthing one summer, duller at Brighton another, dullest at Eastbourne a third." But those who seek quiet, pure air, a beautiful mixture of "the country" and the sea, charming rides in consequence, and places of archæological interest round about, to give inducement for excursions, come home well satisfied with Eastbourne. Under this general term are included three separate districts; that is, a new collection of buildings close to the sea, called the Sea Houses; a straggling village, with a new church and villa residences, called Southbourne; and then further inland, say a mile and a half from the sea, Eastbourne proper, girt with fine trees. The old church there is of Norman foundation, and with its massive and time-stained tower, zigzag ornaments, and perpendicular sedilia, interests and satisfies. Unfortunately the same cannot be said for the new church at Southbourne, in which compo and bad taste coalesced to produce an abomination, and have succeeded wonderfully. It professes to be in the Gothic style, and is certainly *gothic* enough. If it were not for the interior, the ugliness of the exterior would have no parallel. The want of good architectural advice is very observable, too, in the houses which have been recently built. The attic story of the lofty range of new dwellings facing the sea, and the one-pair window-caps in Cornfield-terrace, are caricatures which exemplify the want. There are two interesting old stone houses in the high road close by, with external staircases and mullioned windows. Although rude and of unpretending character, condemned, too, now, to commonest uses, these are much more pleasant to look at than the flaunting "Gothic villa" just finished, with bristling pinnacles, near the sea. The break in the line at Polegate station, which necessitates a change of carriages there, is against Eastbourne; but we shall be much surprised, nevertheless, if it does not become a place of even greater resort, and we would suggest to the authorities and the landowners the desirability of a thought for the future in their present arrangements. Taste does not involve any waste of money, but the contrary.

Hastings, Brighton, and Lewes are all within reach for day trips: the latter, as most of our readers doubtless know, contains much to interest the architectural antiquary.

Pevensey Bay, which Eastbourne borders, is formed towards the west by Beachy Head, the loftiest cliff on the south-western coast, and which juts out far into the Channel. Those who find pleasure in a glorious view and Nature's varied features, may seek it here. The cliff towers up and up, far higher than St. Paul's, before you, and on either hand, is the abounding sea. On the left, when we saw it, its colour was the greenest of conceivable greens, with dashes of purple and a sprinkle of white-crested waves; while on the right spread out an expanse of molten silver, tumultuously throbbing,—a more magnificent sight eyes of man never rested on. Looking towards Hastings you have Southbourne—the bay beautifully curving,—and the last of the martello towers; towards the west, the elevation known as Belle Toute, with its well-placed lighthouse, and on the land side, a noble sweep of downs with furze and foliage and the purple heather. Worldly cares seem less in sight of the great sea. Nor are the emotions transitory to which a view of it gives rise: in after times,—

> "In vacant or in pensive mood,
> They flash upon that inward eye,
> Which is the bliss of solitude."

The old coast-guard men tell strange stories of feats of daring in the ascent and descent of the cliff, done here by smugglers in years gone by. Now, fortunately, the inducements to risk life are fewer and the doings prosaic,—save when some too adventurous tourist tries to emulate them, as was the case not very long since, and is dashed to pieces on the beach below.

The martello towers just now referred to give a peculiar character to this district: they were commenced, it may be remembered, at the beginning of the present century (about 1804) as part of a design for defending the coast against the meditated invasion of Napoleon Bonaparte. The towers consist of two stories, the lower for stores, the upper shell-proof for troops; and when not immediately close to the shore, have around them a deep moat faced with brick, and are entered by a moveable bridge: they are circular, and have a parapet around the vaulted top, to protect the artillerymen in working a long swivel-gun with which they were to have been mounted, but, with a very few exceptions, never were. There are seventy-four of them, we believe; the first a little to the east of Folkstone, the last near Beachy Head. Oddly enough, Corsica, whence came the cause of the fear, furnished the model and the name for the defence. It is understood that they had their origin from a fort in Mortella (or Myrtle) Bay, Corsica, which was captured by the British in 1794.

Pevensey Castle, but a very short ride from Eastbourne, is one of the most extensive examples of a Roman fortified town remaining in this country. Its identity with the Roman British town *Anderida*, appears now to be generally admitted. And there can be no doubt that the outer walls, lofty and thick, with huge solid round-ended bastions, or bulwarks, the whole faced with squared stones and having continuous layers of Roman tiles at intervals, are of the Roman period.* Some writers have thought otherwise, and attributed the earliest parts to the Norman period; but this must have been done without due examination. It is known that there was a castle here before William the Conqueror arrived, and that he garrisoned it. The *Notitia*, a list of the civil and military appointments of the Roman empire, compiled, it is supposed, in the reign of Theodosius the Younger (A.D. 450), or earlier perhaps, mentions, as amongst those under the government of the count of the Saxon shore,† the commander of a detachment of the Abulci, at Pevensey."‡ Moreover, a comparison with the remains at Richborough, Lymne, and elsewhere, sets the question at rest. Within the area enclosed by the outer walls, a large one, a mediæval castle was erected, with its gateway, bastions, moat, keep, chapel, and well, commenced probably by the conqueror's half-brother, Robert, Earl of Mortain. Some careful investigations were made here by Mr. Mark Anthony Lower and Mr. C. R. Smith in 1852, some particulars of which were published by the first-named gentleman.§ A sketch of the plan will serve to explain the arrangement better than words would: the dark lines show the Roman walls, the lighter the mediæval. A marks the Decuman-gate, with its massive flanking towers; B, a postern; and C, a gate fronting the main street of Pevensey; D shows the main entrance to the mediæval castle; and E, the site of the keep. I, is the font marking the site of the "free chapel within the Castle of Pevensey," mentioned in a grant of this fortress by Edward III. and cleverly hit upon by Mr. Lower; 2 is the well; and 3, one of the Roman bastions, connected with a sally port in the mediæval work. At 4 there is a mass of the Roman walling, which has rolled down the declivity.

For many years these walls supplied the neighbourhood with stone, but it may be hoped that no further destruction will be permitted. It is a beautiful ruin, full of valuable teaching.

> "The wild pear whispers, and the ivy crawls,
> Along the circuit of thine ancient walls,
> Lone city of the dead! and near this mound,
> The buried coins of mighty men are found,
> Silent remains of Cæsars and of kings,
> Soldiers of whose renown the world yet rings,
> In its sad story! These have had their day
> Of glory, and have passed, like sounds, away!"

These stones are suggestive: they afford an insight into Roman character, and give us a more personal interest in the early history of our country.

We have but incomplete accounts of the condition and progress of Britain during the 400 years of Roman domination; but we find enough in the monuments of that period which still remain, their military stations, roads, villas, and walls of defence, the pavements, coins, inscriptions, implements, and works of art which have been dug up in all parts of the country, to prove the energy with which, when they had completed the subjugation of the original inhabitants (no easy task), they sought to introduce the arts of peace.

While the sun shines on the ivy-covered walls of Roman Pevensey, still solid and vast, and the birds sing in the trees on the site of the Norman keep, we pace the enclosure, and see as in a glass, the changes which have taken place in the world since their erection, and the wonderful series of events by which the resources of the country have been developed, and her power increased.

You may see another phase of castle building by driving two or three miles farther to Hurstmonceaux, built by the Fiennes, in the reign of Henry VI.* Mr. Britton† notes that it was in the first year of Henry IV. (1399) license was given to embattle and fortify at Hurstmonceaux, and that, according to Dean Lyttleton, the castle was built soon after the license was obtained. The appearance of the building, however, supports those who give it the later date. By that time a fortress was less needed, comfort more so. The old forms were kept,—crenellated towers, and moat and bridge; but windows were opened in the walls, and massiveness gave place to convenience. Hurstmonceaux Castle is built of brick, with stone dressings sparingly introduced, and is called by some writers, "the oldest *brick* structure existing;" that is, of course, they mean the oldest after the *return* to brick, as a material for building. Even this, however, on inquiry would seem to be not quite correct.

The earliest building known to exist in this country, built with bricks resembling the modern or Flemish brick, is (according to the Oxford Glossary), Little Wenham Hall, in Suffolk, which dates about 1260.

According to Leland, the town of Kingston-upon-Hull, was enclosed with ditches, and a wall "made all of brike," in the reign of Richard II. (1377 to 1399), and in the wall were four "gates of brike." Bricks were then 6s. 8d. a thousand. There is no attempt at ornament in the brick-work at Hurstmonceaux; no details to discover. The brick house we mentioned a short time since, Sutton-park, Surrey, built in the reign of

PEVENSEY CASTLE, SUSSEX.

Henry VIII. is much more interesting in this respect. As a mass, however, especially from a distance, Hurstmonceaux Castle, is a fine object. The present custodian, a poor "*superantedated* man," as he calls himself, seventy-nine years old, remembers the castle in a much more perfect state. It was furnished and habitable till the year before he was born, when the furniture was sold and the building dismantled. Ivy covers the walls, and trees grow on the site of my lady's chamber.

And now back to Eastbourne, with pleased and pleasant companions.

A VISIT TO THE MOSQUE OF OMAR, JERUSALEM.

THE following notes by Miss Rogers, the daughter of the eminent wood-carver of that name, descriptive of a visit made by her and her brother (Vice-consul at Caiffa), under the auspices of Sir Moses and Lady Montefiore, will interest our readers:—

Wednesday, July 25th, 1855.—At 8 o'clock in the morning start for the Pasha's seraglio: we enter a vaulted chamber, entirely lined with a lilac cotton print; divans all round. Opposite the door sits the Pasha—I am introduced. The dragoman (Gilbert, who speaks good French) translates for me; the Pasha only speaks Turkish. Gilbert leads me to a divan, and opens the curtains of the windows looking over the terrace of the mosque, now half in shade, the outlines of the walls and minarets and domes, throwing their fantastic shadows across it. Several servants are standing around us; coffee is brought in for us; on the table is a white cloth and a tobacco-cellar, two little ugly glass paper-weights, with pictures and a gutta-percha head. Sir Moses is announced. They are in the drawing-room, where we assemble with the Pasha. He sits on the chief divan, and invites me to sit by his side. Before us on chairs, arranged in half circle, sits Sir Moses and several other gentlemen. We start in procession. The Pasha leads the way through curious, tortuous, zigzag turnings and arches, till we exchange into the sunshine: and the wonderful area of the Mosque, the splendid building with its varied surface of colour, light, and shade; its perfect outline; the little rows of columns, casting pleasant shadows on the thorny ground; the little mosques and tombs; the olive trees and shrubs,—are all taken in at one excited and delighted glance, as we traverse the grounds to the foot of the broad flight of steps to the *holy ground*. By this time a large group of Arab and Jewish attendants and soldiers are surrounding us, whose duty it was to accompany us here. All had to take off their shoes: we had to change ours. The yellow shoes brought for me Lady M. wore. I kept on my bronze slippers, which did very well. We enter the wonderful building, darker than I expected to find it; a solemn, gorgeous gloom, recalling the effect of Owen Jones's Alhambra at Sydenham. Very ancient mosaic of glass and stone, in Arabesque florid style, lines the base of the dome. A gallery of arches, like a Norman triforium, runs round above the surface of mosaic richly-stained glass windows, which, from the variety of colour, intricacy yet certainty of design, minuteness of division, have all the effect of transparent mosaic. Within a wooden railing (which I could peep over on tip-toe) was the wonderful stone which, attempting to follow the prophet to heaven, left the earth, and never quite returned to it again. Here it stands, in a very strange position certainly, with not much to rest upon. The large dimension of this rock or stone surprised me exceedingly. The wooden railing is in the upper part pierced, painted, and prettily carved with rich interlacing designs, not unlike the Saxon MSS. decoration: an immense variety of panels in the lower part are not pierced: the elaborate patterns are grounded out. We are now shown the praying-place of David,—a white marble shrine of exquisite design and execution; a recess or niche, supported by two double columns, each column divided into four parts, and quaintly twisted and plaited, not only with itself, but with its sister column. The capitals, such as I have seen in Norman work, very very fine, such exquisite nicety of finish. Now we descend a dark cavernous-looking place, attended by taper-bearers;—are now under the great stone. Here are four places of prayer—one for Jesus, for Abraham, for Solomon, and Aaron, two of which are even more intricate than the one above. I regret I had not time to make drawings of them, but I took notes of them on the spot, and my brother did the same. Upstairs again: examine the mosaics under our feet: in design they are like the doors from the far East exhibited in 1851, of curious interlacing lines,—zigzag,—much variety of colour. The lower portion of the mosque is chiefly surfaced with encaustic tile,—generally blue and white, full of variety in design,—some quite like Renaissance. Out again into the area, where the olive trees and little flowers of red and yellow (of the vetch and goat-beard kind) grow between the stones: we descend steps, almost overgrown at the sides with rank weeds and thorns, to an open stone basin, called Solomon's Pool (supplied with water from Solomon's Pool at Artas). Sir Moses hands me some to taste. Down again more steep steps, looking as if very rarely trodden; we enter a long underground double arcade towards the south: at first, the columns dividing the arcades are square, and sometimes connected; but at the extreme south they are round, and of splendid proportions, for the ground is more excavated, and the roof is higher, giving a strange effect to the low way we came by. Mr. Consul Finn measured one of the columns with the brass measure I gave to him, and found it was 15 feet in circumference, and a stone in the wall, rather larger than most of them, was 8 yards long: we picked up some fragments as trophies.

Up again into the dazzling daylight; enter the Mosque El Aksar under a deeply moulded arch, like Early English zigzag; deep shadow, the whitewash and modern painting of the monograms of the Kaliffs, &c. give an air of newness to the interior; strangely various-formed columns, stunted round arches, round, square, and all-sided pillars: we assemble round the ancient well called *Moses's Well*, and all take delicious drafts from it. The rafters of the church look like marqueterie. They are dark brown and yellowish-white painted. I made a few sketches here. At the south end rises the dome; eight rich high *stained glass windows:* the eight piers are decorated with a Chinese-looking painting; their surfaces of mosaic, as in the other mosque: the transepts are very fine, arched and groined; a beautiful triple arch, very like Early English. Here is a curious excavation, called the "Manger," a shrine and canopy supported by four pillars, with beautiful basket-worked capitals. Mr. Guadella thinks it was the bed of a fountain, where the feast of the rejoicing of the waters was celebrated. The Pasha now insisted on our being led to the chamber under the *Golden Gate*. This is the spot the Moslems are most jealous of exposing. They (the guides) told us we had already seen it, and wished to make us believe the long arcade led to it; but now we were conducted with a file of Turkish soldiers on each side of us towards the gradually sloping descent, the soldiers ranging themselves in a semicircle on its brow, and we went down into the most beautiful vaulted chamber supported by six columns, and the walls divided by pillars of great beauty: high above us two openings in the double dome admitted daylight, and a few astonished and picturesque

heads looking down curiously and anxiously from without. One of the ladies observes, "They help to give an idea of proportion, and steady the eye." Shaded by the white umbrella of Mr. G. we leave this cool retreat. During our stay in the building one of the party leaves us, and returns with his photograph machine, and makes the best use of the short time: such a thing has never been dared before. Mr. Guadella, one of the party, tells me of his visit to Constantinople: he says he has never seen so much colour in any architecture as in this mosque: he enjoyed Athens and the beauty of the Bosphorus, but the visit to-day was worth the journey from England, if he had come with his eyes closed till he arrived here.

We approach the covered piazza in front of the great mosque: carpets are spread for us beneath the airy dome, supported on its delicate columns: the ladies, that is, Lady Montefiore, Mrs. G., Mrs. Consul Finn, and myself, sit down: the gentlemen group around us, but not sitting on the carpet. I cannot help looking up at the beautiful capitals: all are various, and formed of twisted and entwined leaves of the hawthorn: baskets of interlaced work prevail. We become enthusiastic in archæology. After a rest we walk again. Our attendants are gradually swelling in numbers around us: the soldiers fill us in closely: we wait under the vaulted passage, while Sir Moses settles the bachsheeks. He gives 40*l.* to Dragoman *Tannoos*, to divide among the soldiers and attendants, who are crowding round in anxious and greedy groups.

We had been within these rarely-entered precincts *over two hours*, and had seen much more than had ever been shown to infidels. The Archduke Maximilian and Duke of Brabant did not see one-half we did. Our small party had the advantage, and more than that, Sir Moses was known to be liberal.

MARY ELIZA ROGERS.

Tellibere Encampment, under the Walls of Jerusalem, July, 1855.

THE CHEMISTRY OF BUILDING MATERIALS.

IN the course of the last session at the Architectural Institute of Scotland, Dr. George Wilson delivered three of a series of papers on the "Chemistry of Building Materials," some account of which we must give our readers.

In his introductory remarks, Dr. Wilson, after stating that he did not speak as an architect, builder, mineralogist, or geologist, but simply as a chemist, thus proceeded:—

I suppose there are just six great building materials which mankind have used from the earliest times, namely, wood, earth, snow, stone, iron, and glass. The first three, wood, earth, and snow, are especially the appliances of the savage or half-civilized man. Wood, as you all know, is used in the form of the wattled cabin, kraal, tabernacle of boughs, shanty, hut, and log-house; earth appears in the forms of mud-cabin, turf-cabin, clay hut, sun-dried and kiln-burned brick dwellings; and snow is, in the Arctic regions, the only serviceable building material for the Esquimaux; and even our sailors have thought themselves very comfortably housed with snow walls. The second three, stone, iron, and glass, are the special appliances of the highly civilized man,—stone, from the earliest historical periods; iron, very recently, but very extensively; and glass, not including its use for windows or hot-houses, most recently of all.

Of these six, wood may be regarded as the uniter of the savage and civilized builder.

I shall only, in this paper, treat of stone. What qualities are requisite in a good building stone? 1. A compact homogeneous structure. 2. Moderate hardness. 3. Insolubility in water. 4. Non-disintegration by the atmosphere. 5. An agreeable unchanging colour. 6. Non-liability to acquire a coating of vegetable matter.

As to the first, it is scarcely necessary to dwell on the desirableness of a uniform and equable structure throughout the length, breadth, and thickness of a stone. All destructive agents,—pressure, friction, air, water, frost, or vegetable growths, act unequally on heterogeneous masses. Vesicular lava, with a multitude of cavities in it, would plainly be unsuitable, other things being equal, as a building stone, as in its cavities dust would gather, then vegetable growths, and water would collect and begin to dissolve what was soluble, and the destructive gases in solution would wear down the stone. The same objection applies to such a rock as amygdaloidal trap, to be found in our own neighbourhoods; this dark whinstone having cavities in it filled with white bodies resembling almonds, like seed-cakes. Granite rock, as you know very well, is found in such a condition that it may be polished, and preserved unaltered, as regards appearance, for a long time; still, from the fact that you have three different sets of crystals grouped together in the block, with interstices between the crystals, even where they touch each other most closely, it possesses a disadvantage as regards water, air, or vegetable growths, and is more liable to undergo change than a perfectly homogeneous substance. In like manner, in some sandstones, inequalities permit the same destructive agents to act. You are all familiar with those black lines to be noticed in sandstones. These lines frequently result from layers of mica, but sometimes from a charcoally or carbonaceous matter, resulting from the decay of plants which have become fossil within the sandstone. There is no stone not liable to similar insecurity when we have any thing like inequality in structure. Few stones are more beautiful than shelly limestone, yet it needs but to look at its polished surface to see that the cohesiveness and hardness of the shell and its matrix are very unequal, and to perceive that the destroying and disintegrating agents are acting unequally on the surface, and must wear it down faster than they would a mass of statuary marble, all consisting of identical crystals, or a mass of pure sandstone. Even in those minerals which we are accustomed to regard as most solid, most homogeneous, and least liable to change, we very frequently—far oftener than we expect,—find some heterogeneous element, often in very small quantities, yet quite enough, when acted on by disturbing agencies, to upset the equilibrium of all the remainder. One of the most compact of known stones, quartz rock, may have, though the eye does not detect it, some portion of oxide of iron, one of the lower oxides (*i.e.* iron united with a little oxygen), that readily and gradually combines with more; and whenever a piece of rock containing small quantities of iron is exposed to the air, the iron begins to absorb this oxygen, to unite with it, and to increase in volume; and each little particle, acting like a wedge, splits the mass into fragments, or at least greatly lessons its compactness and cohesiveness. Even such stones as the agate, which we see cut into what we imagine to be a most enduring mass, are found to have long lines unequally coloured that admit of liquids penetrating them. Of that fact there is no doubt—indeed, it is now turned to practical account by lapidaries.

The second requisite I named was moderate hardness. It seems almost needless to say, that a stone should not be too hard nor too soft; yet we know practically how much it means. Our builders have pitched upon the best name for indicating this when they use the word "freestone." In Scotland that name is almost solely applied to sandstones; but in England they apply it also to limestones, and simply mean by freestone, a stone that freely cuts and saws, and neither goes crumbling to powder, nor blunts the point of your chisel in working it, nor kills you by filling the lungs with sandy powder, as very hard stones do. Plainly, "moderate hardness" is a character of very great importance. Were mere compactness or hardness the only desideratum, then quartz rock would be preferable to all the stones we know, as we can get it beautifully equal, and approaching more nearly to uniformity of structure than any other rock, very little alterable by the air, and totally insoluble in water; but then it is so hard, that the cost and trouble, and time expended in the working of it, would be enormous, and the destruction of life would also be great. Even the stones we do use, such as granite, are many of them far too difficult to work to be largely employed. It needs no proof, however, to show that these hard stones involve such time, and trouble, and cost, in working them, as greatly neutralize the advantages of fine polish, lastingness, and beauty. Even the sandstones are, some of them, too hard, especially our own beautiful Craigleith stone, which kills so many masons. I have it on what I believe is good authority, that even a softer stone—the Binny—used in the building of Sir Walter Scott's monument, has also been known to be very fatal to the masons working it. I am told, that during the building of that monument, which occupied four years, and employed seventy workmen, eighteen died by what they themselves call the mason's trouble. Notoriously, however, this Craigleith stone is the worst of all. The masons themselves, attribute the mischief to the sulphur in the stone. But it is not the sulphur that does the mischief. It is merely the very fine irritating sandstone powder. As yet we do not know of any efficacious means of preventing such results, unless by driving away the fine powder, and by working the stone in the open air. I do not think that moustaches are really of much avail. The notion arises from the German masons wearing beards; but I rather think that the Germans' exemption from the disease arises from their working in the open air, and from their working slowly—far more slowly than our masons do. I am told that a man can only chisel six linear feet of Craigleith stone in the time he can chisel fifteen feet of Binny stone. If our masons must work under sheds, the only remedy would be some contrivance for blowing away the dust, as they have in the Manchester cotton-mills, where what they call the fluff is blown away; but you always find the workmen themselves the least willing in such things; for it is well known, that many of the cotton-spinners refuse to work with these fluffers, because they say it makes them hungrier, and costs them more to buy their dinners—and what can we do in such a case?

To come to the third point, it seems at first sight very needless to say, that a stone should not be soluble in water. But you must remember, that there are stones used in other countries which are soluble in water, and which are suitable for dry climates, though useless with us—such as alabaster, called also sulphate of lime, and gypsum. The stones which Mr. Layard found at Nineveh consist of alabaster or gypsum, which is soluble in water; and although one ounce of water will only dissolve one grain of these, still the maxim holds true, "the drop wears the stone." It may not suddenly wash away a house; but plainly, for architectural purposes, any stone soluble in water, so that the beautiful lines of carving will suffer by every shower that falls, is not to be thought of in a country like this. What is the use of alabaster columns, or palaces of marble in this climate? The solubility of their material in water is one reason why we should never have Buckingham arches, or other marble buildings, in this country. If you have a statue like Scott's, it must be under cover; and even Scott's statue, where it is, will suffer; for marble, which is carbonate of lime, is soluble in water. It is soluble to a small extent unquestionably; but if the water contains carbonic acid—and all rain does contain carbonic acid—then it dissolves marble more readily, and it should not be used in a climate like this, where all exposed marble statues, pillars, or carvings, are infallibly rounded on the outline by every shower. For exterior ornament our sandstone is infinitely preferable. But when I speak of solubility in water, it is not with the purpose of merely alluding to alabaster or marble. I would direct your attention to this very important fact, that with exceedingly few exceptions, all building stones contain something soluble in water, and that if water once begins to dissolve the stone, the integrity of the block is invaded, and sooner or later it crumbles. We are not in the habit of thinking of granite as having much to do with solution in water. We make great fountain basins of granite in such a crystalline condition as resists the action of water for ages; but there are other granites, not distinguishable by the eye, or chemically, from those enduring ones, which rapidly crumble when exposed to the action of water; and they crumble because one of the constituents of granite—the one

which gives it its colour, viz.—felspar, which is red in one and white in another block, is the alkali potash or soda combined with silicic acid. These alkalis are perfectly soluble in water. They are kept from dissolving readily united with a certain amount of silica, as they are in glass, but in certain conditions, very obscure, the power of combination is conquered by the alkali (as in soluble glass and in silicates used in solution for hardening more perishable materials, although these silicates being based on lime when once dried, are not so likely to suffer from the influence of water as the silicates based on such alkalis as potash or soda), and the rain acting on the granite, begins quickly to dissolve the alkali and the felspar gives way; the black mica and the glass-like particles of quartz are separated, and the whole mass breaks down. I am anxious to impress on all, that in the selection of a building stone, apart from its not being in mass, or altogether soluble in water, we must keep in mind to what extent it contains a single thing soluble in water. Our own whinstones and trap rocks are in the same predicament as granite.

Sandstone is one of the very few building stones which are quite insoluble in water, and that is one of the many excellences it possesses as a building material. It is not itself in mass soluble in water, and frequently it contains not one per cent. of soluble matter in it; so that, though it absorbs water, it does not crumble in the way that harder rocks, such as granite and whinstone, very readily do.

I now come to the fourth point, "non-disintegration by the atmosphere." That after all is the most important point the chemist has to deal with. There is no stone—absolutely none—quite indifferent to the action of the air, and which does not undergo some change of the nature of a destructive one. I may point, however, to one seeming exception, an exception proving the rule; namely, a very remarkable building stone from India, called *laterite*, from the Latin name for a brick. It is found on the west coast of India, occurring partly in cliffs rising high up on the sea coast, and partly forming superficial masses over great districts which are wholly waterless. It has this remarkable peculiarity, that when you dig it, it is soft, while at the outer surface, if it has been exposed, it is a hard stone. If you remove the hard external coating, then you come to a mass as soft, in some portions, as cheese. Other portions, not so soft, can be cut with the spade, so that they shape it into blocks of almost any size. Then it rapidly hardens like Roman cement, and becomes massive stone. The old Inquisition at Goa, and the old Portuguese Cathedral, as well as the old Pirate Forts which abound along this coast, are constructed of laterite; and indeed it is used in India in preference to any other building stone, where it can be had. It results from the decay of granite, or syenite rock like granite, and a rock very rich in felspar, and containing much iron. When I come to speak of mortar, I shall recall your attention to this stone as presenting us with a great deposit of what may be called native Roman cement, which may be dug soft, and then hardens itself into the hardest mass. We have no such stone in this country. The stones found in most parts of the world rapidly give way under the atmosphere. It would be difficult to enumerate all the ways in which atmospheric agencies affect building stones. Excluding electrical discharges, I will notice—1st. Alterations in temperature, causing unequal expansion and contraction—stones irregular in structure, and conducting heat unequally, being liable to be split, from one portion expanding more than the other. 2nd. The absorption of water by the pores present in the most solid stones, followed by the freezing of the water. Water, in freezing, as we all know, forms crystals of ice, occupying a much larger space than the liquid water did, and thus it may split the stones to fragments. I need not enlarge on the manner in which water acts destructively, coming from the atmosphere. Water finding its way into the most porous stones, as indicated under the previous head, very seldom fails to find something it can dissolve; and dissolving that, it lessens the compactness and cohesion of the stone. The truth is, that the more we look into the matter, the more we find, that with the exception of the metals—such bodies as charcoal, sulphur, and a very few others—there is scarcely a chemical compound not soluble in water. I do not think a chemist would like to say that any body was insoluble; but there are multitudes of bodies which we are in the habit of putting down as insoluble—meaning by that, that they are so slightly soluble, that for practical purposes, whether in reference to pure water, or in using chemical tests, we can disregard their solubility, though they are nevertheless *so* soluble in water, that in the course of years the action of that liquid upon them affects them, and ultimately causes very extensive changes in the condition of the mass. 3rd, More important than any of these is the direct corroding action of active chemical substances. They are not very numerous, and their action on the whole is very simple. The most important of them, probably, is carbonic acid. We always have carbonic acid in air, and can detect its presence by putting out a little limewater in an open vessel. All burning, all the respiration of animals, all decay of vegetable matter, and all furnaces pouring forth gases into the atmosphere, as well as many mineral springs, are continually adding carbonic acid to the air; and although we have a wonderful agency for diminishing it, in its consumption by plants during sunlight, still there is a surplus over, and that surplus is constantly corroding all our buildings. Carbonic acid does not act so much as a gas as when dissolved in rain-water. Rain water, with carbonic acid added to it, has the power of dissolving, for example, marble, carbonate of lime, and phosphate of lime. It can also dissolve carbonate of magnesia, present in certain limestones, such as the Bolsover limestone employed in the building of the Houses of Parliament—a stone containing magnesia and lime united with carbonic acid. This stone is not soluble in water alone, but is distinctly soluble in water containing carbonic acid. This carbonic acid acts with great energy on such stones as granite, in certain conditions; but we do not understand as yet, otherwise than imperfectly, why it is, that of masses of granite, one will remain unacted on by atmospheric agencies for an indefinite period, whilst another will go crumbling down, and in the course of a few weeks will often be reduced to a state of utter disintegration. In granite you have three constituents; the one glass-like crystals of quartz. These crystals are like hard, brilliant, transparent obelisks. They may be coloured like the Cairngorm or amethyst, which are yellow, brown, or purple crystals of quartz that have shot up from a mass of granite or similar rock. Then you have always a black-looking body, called mica, which is not altered by the air. In addition, you have a third constituent, that gives the white, flesh, or red colour to granite, namely, felspar. It has either potash or soda in it. It is on that potash or soda, in certain granites, that the carbonic acid of the air, dissolved by rain-water, acts so injuriously. The acid begins to extract alkali from the felspar, and the felspar crumbles down ultimately into a white clay—a process continually carried on, and assisted artificially in Cornwall and Devonshire, with a view to obtain clay for the potteries. The condition of granite which the Germans call diseased granite, is perhaps the best example that can be given of the remarkable power of one of the atmospheric agents—carbonic acid dissolved in rain water—in breaking down the hardest stones.*

* To be continued.

THE PARKS.

If there is any portion of this great metropolis that ought to be held sacred to the objects of original use it is that reserve of open space called St. James's-park. Being nearest to the centre, the requirements of a population—grown to an extent little contemplated when the reserve was first laid out—cannot dispense with one rood of its grassy surface. The compacted cities of Westminster, Pimlico, Kensington, Bayswater, and numerous other districts of London (any one of which would be, in extent and number of houses, a city in any other country), have expanded themselves far beyond the bounds of all the parks; so that the sylvan and rustic promenades of former days have now become the nursery walks of infant London, as essential and indispensable as the lungs to the breathing body.

Of late years the care of officials has been exercised, not to preserve these spaces in their integrity, but rather to nip and curtail public liberties,—conceding to favoured individuals, in many instances, large portions—as in Regent's-park—of the central turf.

Various inclosures have been fenced off in this latter park, withdrawn from the public liberty, and appropriated to the fortunate occupants of insulated mansions. Nearly 100 acres have been excised in this way; one portion of the external boundary—a strip of from 300 to 400 yards, about four acres in extent,—was leased to a friendly applicant, lately deceased, and a bridge across the canal, with an entrance designed for the use of Portland-town, was consigned to the privacy and solitary use of that favoured individual. Various applications were made to the authorities by the inhabitants for the freedom of this approach, but the answer was ready: "It has been already disposed of for the life of the occupier of a house in a nook opposite to St. John's-wood Chapel." That excuse no longer exists; let the inhabitants now look to it.

The Commissioners of Woods and Works are the arbiters of these matters, and have to deal with all the urban parks: if their management be no better than that of the *Woods and Forests*, bad indeed will be the issue for the generation now crowding upon us.

The matter which now, however, excites public interest, and to which several years back allusion was made in the *Builder*, is that which more nearly touches the vitality, or at least the health, of the multitude. St. James's Park—the most perfectly planned and planted of the people's pleasure-grounds—is, it seems, threatened with an eruption and curtailment, as destructive of all that has been done already for ornament, as it is absolutely useless in its end and aim.

A road is contemplated, nay staked out, to conduct from St. James's Palace, to cross the park, and the water by a bridge, and *to lead nowhere* in a continuous route; it is to end at the centre of Birdcage walk, and at right-angles with it! For what object? Is it to make an easement for the world, so far from royalty as to be out of eye and earshot? It is certainly for no convenient public purpose, for such an innovation would cut away acres of green sward and whole bosquets of shrubbery. The road at present *patent* is by far the largest causeway of London; it leads to an exit, Buckingham Palace-gate, and runs direct to Belgravia and Pimlico. Already, to enlarge it, several acres have been covered with gravel, and a great portion (sufficient to parade a regiment or two) has been inclosed for the privacy and "*Aubignement*" of the Palace. Her Majesty, whose popularity is equalled by that of no other sovereign, could never have been advised of the spoliation now meditated.

It would be hard to walk through the ornamental plantations of St. James's (for the completion of which all credit is due to those who designed and carried them out), and find an opportunity for contemplation in solitude. When, however, the air is balmy, and the sun shines forth, no landscape garden can present a higher scenic effect. On these occasions sportive children recreate themselves through every open space, and the toil-worn mechanic, or valetudinarian, who can no further migrate, enjoys, if not the fresh breeze from Surrey hills, at least the poetry of floral nature. The *verdant pool*, if not altogether fragrant, glitters in the sheen; and the many-varied plumage of aquatic birds induces a momentary forgetfulness that we are in the core of the metropolis. The abbey's massive towers, the spires, the statued columns, the colossal torsi of Westminster Palace, and the nearer Horse Guards belfry, seen through and above the trees, lend an impressive force and magic to the scene.

Is all this to be marred, by turning the tide of commerce through the fairy land? A straight causeway, with its endless torrents—its dust or water carts? No—forbid it all, good taste.

There was a hint given in the *Builder* some years back, of a route across the park, in direct continuation of Pall-mall—that would strike in upon Constitution-hill, half-way between the Colossus Arch and the Palace, and form a direct approach to Hyde-park-corner, *avoiding the hill* of St. James's-street; whilst at the same time that access would be convenient for Pimlico, or even for Westminster.

The improvements meditated in that quarter, leading to Victoria-street, would be adequately subserved by the continuation of Pall-mall—but there may be an obstacle—Lord Sydney's house, and *that alone*, should be pulled down. Certainly, that causeway should pass in front of Lord Ellesmere's house (at about 50 feet distant); and the right of way to Westminster, must involve the permission to pass in front of the Buckingham Palace at a respectful distance of about 200 *yards*: however, when we reflect that there is no other metropolitan palace in Europe, that is not approached by public highways at a still nearer space; and above all, when we consider that while the citizens (*en masse*) have no opportunity for rural retreats, whilst our gracious and most-deservedly popular Queen has many glorious palaces, we would hope that no partiality for reserve shall ever debar the inhabitants of London from the free use and enjoyment of all of space that crowded civilization has left for their accommodation and enjoyment.

Whilst on the subject of parks, it may not be inopportune to repeat a requirement long needed, in a causeway for all sorts and conditions of carriages and men. The inclosure of Hyde-park extends for more than a mile from Apsley House to Kensington on the south, and from the Marble Arch to Notting-hill on the north; on both sides there is a great and widely-extended population, and yet after night-fall throughout the distance there is no thoroughfare for foot passengers; and even by day, none for hired carriages! London in the nineteenth century being thus cut off from all intercommunication as to these important districts. A road from Victoria-gate over the *mussee Serpentine bridge*, opening out upon the grand *chaussée* lately planned and laid out by Mr. Jackson, through Brompton, could injure no interest nor prerogative, and would be of incalculable value to far outlying residents. This would conduct to and between the long anticipated National Gallery, the Battersea-bridge, and regions thereabout, to Bayswater, Kensall, &c. &c. The swelling tide of population demands this opening, and there would appear to be no obstacle beyond the latent or suppositious powder magazine and its corporal's guard. The profuse waste of masonry lavished on this *model* of Waterloo-bridge would seem to have been achieved for no other purpose than the road recommended.

The old city presents numerous inexplicable straits, such as *Temple* and *Holborn Bars*, and *Paternoster*, with other cranky alleys, *intra muros*: outside, the venerable Wych-street, the neck or scrag of the Strand, between St. Clement's and St. Mary, *cum multis aliis*,—look at the wide avenues of low Pimlico—how light, how airy! and yet these are the only redemption for *that* level of swamps. Look again at the roads of Old Brompton, opposite the Oratory, an arena large as the Mall. This is the secret to make new, and even crowded quarters, tell. It is to be hoped that the authorities of *Woods and Works* will take a hint from private men acting in their own interests, and that a great and thriving commercial people may not be obstructed in their advance, nor cribbed in their intercourse, through somnolence or want of taste, on the part of those to whose care and judgment such matters are confided.

QUONDAM.

TOWER OF ST. MARY'S, TAUNTON.—A motion to authorise all such measures as may be thought necessary for the effectual repair of the tower, and to rate the inhabitants and parishioners of the said parish for such repair and the expenses attendant thereon, has been lost, on a poll, by 420 votes against 414.

ARCHITECTURE IN PRUSSIA.—We are told that the King of Prussia has given two prizes, of 300 thalers each, to be competed for by the Architectural Society of Berlin.

HOLLAND, THE ARCHITECT.

DRURY-LANE THEATRE.

WITH reference to the notice of Mr. Henry Holland, the architect, and his works, in the *Builder* of the 8th inst. and especially the question whether he was the architect of the East-India House, I beg leave to say, that although Mr. Jupp was the recognised surveyor to the East India Company, yet Mr. Holland was the architect or designer of the East-India House in 1799 and 1800, a course of proceeding, I believe, not unknown in more recent years.

My authority for this is, that I have had in my possession for these last forty-eight years a collection of working and other drawings of the East-India House, plans, sections, and numerous details at large, which I obtained out of Mr. Henry Holland's office at Hans-place, in the year 1807, when the establishment was broken up, about nine months after his death, through Mr. Rowles, the nephew of Mr. Holland's brother and executor. Some of them have Mr. Holland's own handwriting, and one (a working sketch of heights) this memorandum:—"Section of Lime-street front, as settled by Mr. Jupp," showing, I presume, that Mr. Jupp, as the established surveyor, had some supervision of the works.

I have also drawings of Carlton House ceilings, and had many other drawings of that edifice, Brighton Pavilion, and other buildings executed by Mr. Holland; also a plan of the old Covent Garden Theatre, as altered by him for Mr. Harris, then proprietor, in 1792, which was burnt down September 20, 1808.

In addition to those works named in your paper, I may add that he did a great deal of work for the Duke of York, at Oatlands; the Duke of Bedford, at Woburn, &c.; Mr. Whitbread, at Southill; and Earl Spencer, at Althorpe and Wimbledon, of which I had many, and still retain some drawings.

The well-known Claremont House, near Esher, was his work, through the connection of his relative, "Capability Brown," who laid out the grounds.

I may likewise mention that he was the planner of Sloane-street and Hans-place, a speculation of his, where he built himself what was then considered a handsome villa, and a charming suburban retreat. The white brick houses on one side of Sloane-street, were those first erected by him detached, and the spaces were afterwards filled up as builders could be found to take the ground.

The Albany-chambers in Piccadilly, of which I had some drawings, were, I believe, a scheme of his on the gardens of York House; the front or main house being the work of Sir William Chambers.

Henry Holland was also, I believe, the architect of Sir W. W. Wynn's house, in St. James's-square, and of Brooke's Club-house, in St. James's-street, the front of which last has been partially altered within these few years: they bear his impress.

Allow me to add, the present Drury-lane Theatre was commenced on the 21st October, 1811 (not the 29th), Benjamin Wyatt, architect, Henry Rowles, builder, and was opened 10th October, 1812.

The amount of contract was.....	£112,750
Additional works, fittings, and expedition money	13,040
	£125,790

This was, I believe, the first *bonâ fide* contract for a building entered into in London; the only previous ones, that I know of, were the hospital at Yarmouth, by Peto, and a small barrack at Hampton-court, by Tredgold.

The original design by B. Wyatt, contemplated an Ionic portico in Brydges-street, and a colonnade in Russell-street, but want of funds prevented the execution. The present projection in Brydges-street was done by Soane some years after, and the colonnade in Russell-street, by Beazley, when he altered the interior or auditory, during the lesseeship of Elliston.

I make these remarks because I was employed as Rowles's superintendent, from the first day of commencing to the drawing up of the curtain, when the late duchess of St. Alban's, then Miss Mellon, performed *Nell* to Dowton's *Jobson*, in the farce of the "Devil to Pay," the play being "Hamlet."

Of the previous theatre, by Henry Holland, I had several drawings, but in the lapse of years have lost or destroyed them.

H. B. HODSON.

SLATE AND ASPHALTE PIPES.

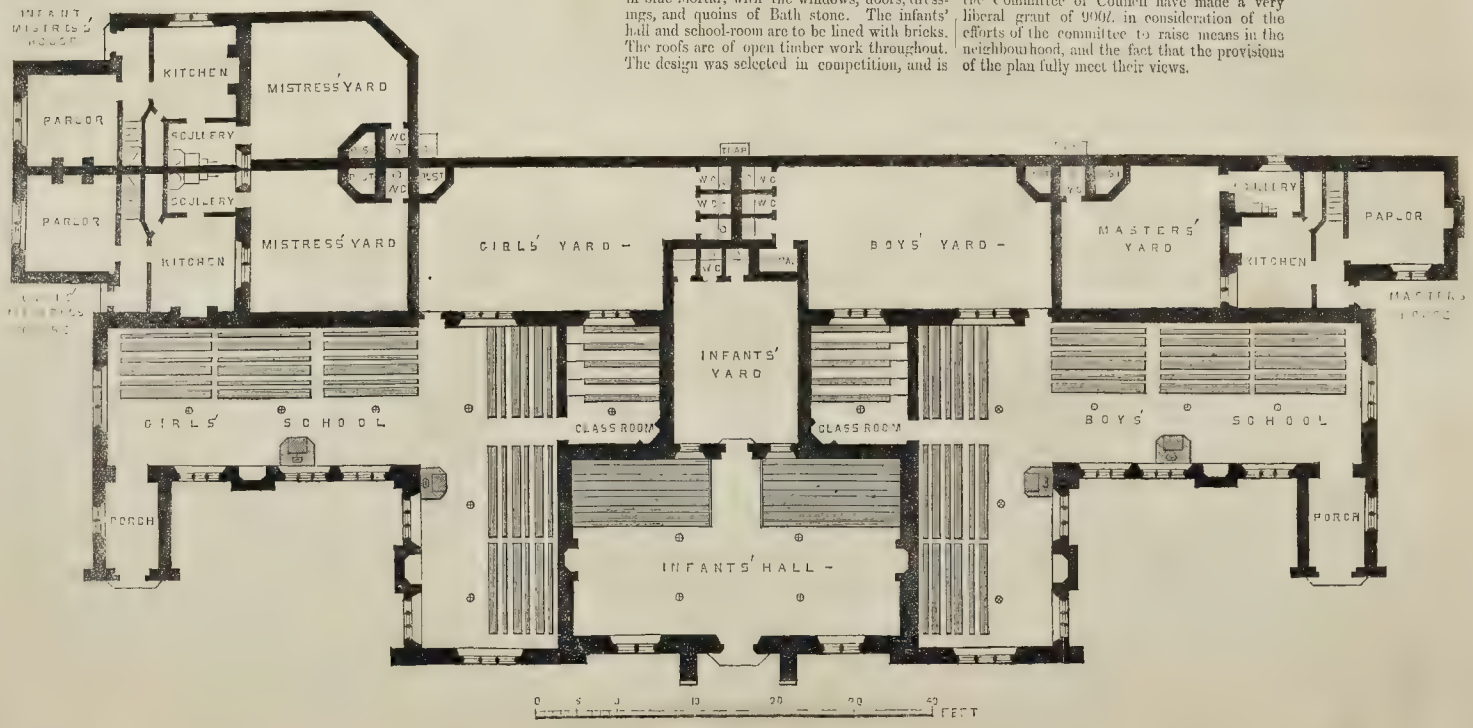
THE importance of a good supply of water is so strongly and increasingly felt, that many towns are incurring the great expense of laying down long lines of cast-iron pipes, in some cases more than twenty miles in length, in order to obtain water from pure sources. To diminish this expense, it is proposed to use pipes made of a combination of slate, asphalte, and iron, which can be supplied, we learn, at little more than *one-third* the cost of cast-iron pipes, while in point of strength they are sufficiently strong to stand the internal pressure to which pipes in such situations are subject: they have been proved by hydraulic press to a pressure equal to that of a vertical column of water 500 feet high, and it is stated that a much greater pressure than this is required to burst them. The kind of slates used for this purpose are such as are too small for roofing houses, and for which there has not hitherto existed any use whatever, so that vast quantities are thrown away as rubbish at all the quarries. In forming the pipes the slates are bound round a cylindrical mould, overlapping and breaking joint with one another, very much as on the roof of a house, or like the scales round a fish. A continuous spiral of hoop-iron is used to bind them round the mould, and the whole being heated, the interstices are filled in with fluid asphalte, and thus is formed a kind of wicker or woven work of slates and hoop-iron, cemented and concreted with asphalte. The adhesion of the asphalte to the slate is found to be as strong as the adhesion between the laminæ of the slate itself, and thus the whole becomes nearly as strong as a homogeneous thickness of slate.

These pipes have as yet been made of only 12 inches and 24 inches diameter, and 7 feet in length. They cannot conveniently be made of less than 10 inches diameter, but they can be made larger than 24 inches, and longer than 7 feet if desired.

Their resistance to transverse strains has been tested by loading them in the middle, when supported at the two ends, with a weight of six tons, which is a greater strain than they are likely to be subject to in practice. In substance, they are made three times as thick as cast-iron pipes, and are then exactly equal to them in weight. A cast-iron socket is affixed to each pipe to allow the junction to be made in the usual way with spun-yarn and lead.

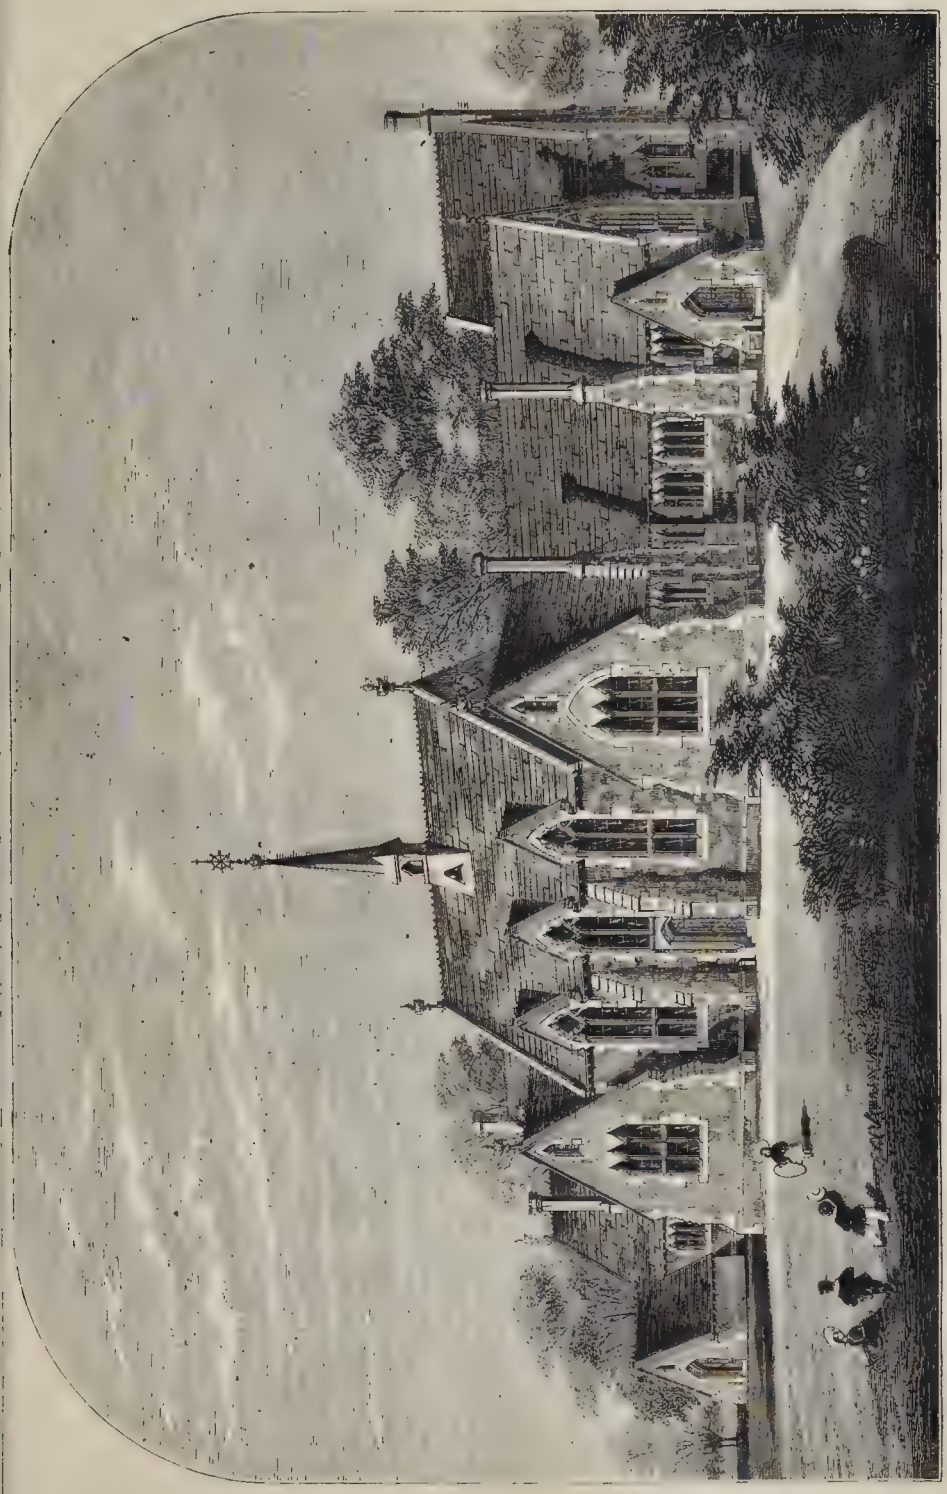
The specimens of these pipes at Messrs. Braby's slate-yard, near the Surrey foot of Hungerford-bridge, have been proved to rather more than 500 feet head of water, and were exposed to the frost of last winter without sustaining any injury. Of course at this early stage we go no further than inviting for them the consideration of those who are interested in the subject.

ROOF-GARDENS.



IT has often struck me how much better it would be, for London houses especially, to have glass roofs instead of the heavy tiling or slating now in general use. I will leave all the practical portion to many of your able readers—I only throw out the hint; and in so doing, think that a *garden*, a *smoking-room*, or an *observatory*, would be, in all respects, a gain upon "the loft" which is now the receptacle for old worn-out furniture, dust, and spiders.

Many houses are now being adapted for photographic purposes, and I do not see the slightest difficulty in encouraging horticultural as well as chemical science; and if you wish a list of plants suitable for such a glass room in a London atmosphere, I will send one. Another gain would be, that the house would be much warmer, as slates and tiles are never so well fitted as to be without draughts: putty and thick glass prevent these.



Q.

LUDLOW NATIONAL SCHOOLS.

These schools now in the course of erection, at Ludlow, are for the accommodation of 600 children—200 boys, 200 girls, and 200 infants, and have attached to them three distinct residences for a master and two mistresses. They are to be built of rubble masonry, arris pointed in blue mortar, with the windows, doors, dressings, and quoins of Bath stone. The infants' hall and school-room are to be lined with bricks. The roofs are of open timber work throughout. The design was selected in competition, and is the production of Mr. T. Nicholson, of Hereford, architect to the Hereford Diocesan Church Building Board. The builder is Mr. Coleman, of Chavill. The cost of the whole scheme, including the purchase of the site, fencing the ground, &c. will be about 2,400*l.* towards which the Committee of Council have made a very liberal grant of 900*l.* in consideration of the efforts of the committee to raise means in the neighbourhood, and the fact that the provisions of the plan fully meet their views.

PLAN OF LUDLOW NATIONAL SCHOOLS.

LUDLOW NATIONAL SCHOOLS.—MR. T. NICHOLSON, ARCHITECT.

MEETING OF THE YORKSHIRE ARCHITECTURAL SOCIETY.

The annual meeting of this society took place at Pontefract, on Tuesday and Wednesday in the week before last. The members assembled at All Saints' church, on Tuesday morning. After examining the old ruin, the party proceeded to the Castle, accompanied by Mr. Wood and Mr. Copley, both of whom, together with Mr. Fox, pointed out objects worthy of attention. Thence they proceeded to the Anchorite's Cell recently discovered in Southgate, after which they inspected the interior of St. Giles's. An adjournment then took place to the Elephant, where the annual public meeting was held. The room was decorated.

Major Waud presided, and in his address referred to the course too frequently adopted with regard to repairs of ecclesiastical buildings. The churchwardens, he remarked, having covered up every deficiency with plaster, had frequently concealed the open roof of the church with a flat ceiling, with cornices copied perhaps from the squire's dining-room. They had cut away the bases or capitals, and frequently the sides of pillars, for the most insignificant purpose—perhaps to make a more convenient seat for the churchwarden or the squire's lady. Many were aware of instances of this kind. They then covered all with plentiful coats of white and colour wash, and having thus succeeded in concealing or disfiguring most of the architectural beauty of the original church, they sought to hand down their names as benefactors of the church in a tablet bearing an inscription to the effect that the church was beautified and renovated, at such a time, by so and so, churchwarden.

Papers were then read, by the Rev. R. E. Batty, "On the Priory of S. Oswald, at Nostel," and by the Rev. Mr. Gatty, on "The Ecclesiastical Bell." A paper by Mr. J. W. Hugall, on "The Past and Present State of Ackworth Church, with some Topographical Remarks," had been announced, but the reading of it was postponed till the following day. The meeting then broke up, and a party proceeded to inspect the Priory-field, the Old Hall of the Talbots, the Stump Cross on the road to Ferrybridge, and the old Norman church at Birkin. They returned to the Elephant, and partook of dinner, Major Waud presiding.

On the following day the members and their friends had an excursion to see various churches and other objects of interest in the vicinity, as at Wragby, Ackworth (where the rector read the paper by Mr. Hugall, the architect of the church, in his absence, "On the Past and Present State of Ackworth Church, with some Topographical Remarks"), Badsworth, Kirk Smeaton, and Womersley. The excursionists then returned to Pontefract.

The next meeting may possibly be held at Doncaster, in conjunction with the Lincoln Society.

MANCHESTER.

New Workhouse.—The foundation-stone of a new workhouse was laid on 5th inst. The guardians succeeded in purchasing about forty-five acres of land, eligible as a site, on the Bougs Estate, at Crumpsall, about three miles from the centre of the city, for about 150*l.* an acre. One object of the new establishment was to get land so that the labour test could be properly applied. The stone was laid by Mr. Rickards, chairman of the board. The first range of buildings will contain, besides a porter's-lodge, on the left-hand side, a waiting-room, a bath-room, and a sleeping-room for females. The same arrangement prevails on the right-hand side for males. A courtyard, the central portion of which will be planted, divides these rooms from the principal range of buildings, which extends across the enclosure, being 420 feet in length. The central portion will be four stories high, and the wings three stories. The rooms for the principal officers will be in the lower story, at the centre; the upper stories being devoted to the female paupers. There will be two sets of day, washing, and bath rooms, those for able-bodied females being on the left side, and those for males on the right, all 12 feet high. The two ranges of rooms will be separated by a corridor extending the entire length, lighted at either end by openings in the ceiling, and through recesses in the walls. There will also be in this range a room or chapel 57 feet long and 18 feet wide, devoted to dissenters. In the basement story of this pile the domestic offices will be situated. The chapel for the inmates occupies a plot a little further behind, and stands detached from the main building. It is to accommodate about 800 persons. Still further in the rear is a third range, parallel with the others, and extending also across the enclosure. This will be three stories high. The central portion is for women with their children, and is to comprise two large day-rooms, with sleeping-rooms over them; the wings will be occupied, one by girls and the other by boys; for each of these there will be a school-room, day-room, dormitories, washing-room, and bath. The washhouse and laundry department, on a necessarily extensive scale, is still further within. The last range of buildings will have the general infirmary in the centre, four stories high; and the wings, three stories high, will be appropriated to the idiotic, epileptic, and imbecile paupers, male and female, accommodation being provided for 250. The general arrangements do not include a common dining-room, it having been found that where disturbances have occurred in the workhouse they have generally originated in these gatherings. The cooked food will pass from the kitchen (beneath the chapel) to a cutting-up room, and be there apportioned for the inmates. Four hoists will then convey it to four serving-up rooms, whence it will be forwarded on warm-water trucks to the day-rooms, for distribution to the several wards, where only about forty will dine together. Various yards are to be provided for the different classes of inmates, and every requisite for the active occupation of those capable of labour. The immediate accommodation to be provided is for 1,660 inmates, thus classified:—Able-bodied, male and female, 745; women, 76 (with infants, 76), 152; idiots, epileptic, and imbecile, 248; children under sixteen years of age, 255; reception wards, male and female, 60; hospital (for the requirements of the house), male and female, 200: total, 1660. It is intended that the aged and infirm paupers shall remain at the Bridge-street Workhouse. The plans were prepared by Mr. A. Mills, Messrs. Mills and Murgatroyd being the architects to the board; and in order to ensure every modern improvement, and the best form of construction, he inspected the chief buildings of this kind in the country, accompanied, in many instances, by a deputation from the board. After some modifications suggested by the board, or the clerk, they were finally sanctioned by the Poor-law Board. The contracts have since been let, and considerable advance has already been made in excavation, road-making, and building the arched cellaring. The contractors are—Messrs. D. Bellhouse and Sons for the carpenters, joiners, bricklayers, and masons' work; and Mr. Stephen Longdin for the iron-work, including the cisterns, which are all to be of this metal. The cost of the land, including the field for the road, is something over 13,000*l.*; the architect's estimate for the building is 37,000*l.*: making a total of 50,000*l.* There is to be no unnecessary expenditure in architectural display: the whole is to be substantial, the walls being of good red brick, with stone dressings in the more prominent parts.

St. Mary's Hospital.—The committee of this hospital having decided to erect a new building in Quay-street, the first stone, according to the local *Courier*, was laid on Monday before last, by the Bishop of Manchester. The plans selected are those of Mr. N. G. Pennington. From the principal entrance in Quay-street is the hall, 16 feet square, the walls having pilasters and an entablature of the Corinthian order. Fluted Corinthian columns and entablatures mark the division between the entrance-hall and vestibule. The vestibule and staircase are 30 feet by 22 feet, and 30 feet high, lighted from the top with an ornamental lantern light. The walls are decorated with ornamented pilasters, cornices, panels, and entablatures. Ascending a short flight of steps, the level of the library, museum, and lecture theatre floors are attained, and these are entered by large glass doors, with inscriptions overhead. A corridor, 5 feet wide, divides the library and museum, and is the means of access to the lecture theatre. The library and museum are each 18 feet by 24 feet, and have galleries half way up between the floor and ceiling for access to the books. Circular iron staircases descend from the ground-floor to the gallery floors in each room. The lecture theatre, lying behind the extent of the library, museum, and corridor, is 42 feet 6 inches, by 18 feet 6 inches. Both library and museum, as well as lecture theatre, are lighted with lantern lights. The rest of the ground-floor is appropriated to three prescribing rooms, a matron's parlour, and a board-room fronting to Quay-street; a waiting-room, 28 feet by 16 feet 6 inches; dispensary 16 feet 6 inches by 15 feet; drug store, and covered yard. On the first and second floors are ten wards, averaging 21 feet by 15 feet each, and four wards averaging 16 feet by 12 feet each. On the first floor is the ladies' committee-room, surgeon's parlour and bed-room, and matron's bed-room. There is also a nurse's kitchen and bed-room to each floor. On the second floor is an operation-room, 15 feet by 39 feet. Baths, lavatories, water-closets, and store-rooms are provided for each floor. The height of the wards from floor to ceiling is 12 feet in the clear. The elevation to Quay-street is Italian in design. From the ground-floor to the first floor the building is faced with ashlar stone, having rusticated pilars and entablature above. The principal entrance consists of Corinthian columns and entablature, with a carved archivolt round the doorway. The centre compartment is faced altogether with stone, and the windows have carved architraves and jambs. Stone cornice, parapet, and blocking surmount the whole.

The City Gaol.—This building, completed only about five years since, to contain 432 inmates, is already found to be too small: and at a late meeting of the City Council it was proposed to add 400 new cells. As to the cost of the proposed extension, the chairman of the gaol committee gave it as his own opinion that the work might be done for something like 24,000*l.*

New Churches.—Notwithstanding the badness of trade and severe taxation, we are glad to perceive that Manchester is now either actually building, or actively engaged in canvassing subscriptions for, no less than five churches—one in Hulme, another in Ancoats, another in Miles Platting, another again at the top of Rochdale-road, adjoining Collyhurst, and lastly one for the population of Cheetwood and Strangeways, to be built in Waterloo-road.

PROVINCIAL NEWS.

Lynn.—On all sides, says the *Norfolk Chronicle*, new buildings of a public character are springing up at Lynn. Last year the Athenæum and Corn Exchange were erected, and at present there are in course of construction a new union workhouse and public baths. The Mortuary Chapel, built three or four years ago in the South Lynn Cemetery, is being pulled down, it being rendered useless from the South Lynn burial-ground, under the new arrangement, forming part of the borough cemetery, and chapels being required in a different part of the ground, in the construction of which the materials will be used. Mr. Stimpson, who is building the baths, has also the contract for the chapels in the burial-ground, which will be immediately commenced.

Holbeach.—The building of the new Corn Exchange here is progressing: the walls are sufficiently high to lay on the roof. The alterations at the gas-works, which are being enlarged, are going on slowly. The present supply of gas is very limited, and the town is only indifferently lighted.

Melton Mowbray.—The opening of the Corn Exchange took place on Wednesday in week before last, by many of the directors, shareholders, and their friends, dining together in the New Hall. The building is situate in Nottingham-street, and is of red brick and stone. The principal entrance is approached by a short flight of stone steps. The flooring of the entrance-hall is composed of Minton's encaustic tiles, having three centres, which were presented to the directors by Mr. N. Whitchurch. There is

a room on the right hand side for the Melton Public Library, and on the opposite side is a room devoted to the Savings' Bank. The upper rooms are approached by a stone staircase: one of them is used as a news-room. The Corn Exchange room is at the back of this building, the entrance to which is under a glass roofing. The hall is 80 feet long by 40 feet in breadth, and 35 feet in height: the roof is principally composed of Hartley's rough plate glass, and there are no other windows. Over each of the fireplaces is carved stonework. The walls of the room are panelled, in which provision is made for a system of advertising by placards, and between the panels there is a ventilating apparatus. The architects of the building were Messrs. Malinson and Son, of Nottingham; and the builder, Mr. Norman, of Leicester.

Weymouth.—Measures are now about to be taken towards ensuring an efficient supply of water for the whole of this borough. Mr. Hawkesley has been appointed engineer to superintend the works, which will produce a constant supply for the whole of the town.

Southampton.—The Southampton Dock Company are constructing a dam at the entrance of the middle graving-dock, to enable them to lower the sill and apron 18 inches: the grounding blocks being also lowered, will give a greater depth of water inside.

Ashton-under-Lyne.—The ceremony of laying the foundation-stone of the Odd Fellows' Hall about to be erected in Stamford-street, Ashton-under-Lyne, took place on Saturday before last. It is estimated that the building will cost 3,500*l.* Besides the usual committee and other rooms for business purposes, space is to be assigned for library, reading, and conversation rooms, and the society will confer an important benefit on the town by erecting baths of the usual description, including a spacious plunge bath, which are to be available to the public at a small charge.

Preston.—There has just been completed at the works of Messrs. John Hawkins and Sons, cotton spinners, the highest chimney in Preston. Its height from the foundation to the top of the stone cap, is 258 feet; width at foundation 34 feet; width at ground line, 26 feet 6 inches; width of brickwork at top, outside, 7½ feet; inside, 5 feet 2 inches; extreme width of stone cap, 12 feet, and projection 2 feet 2 inches. The weight of the stone cap is 31 tons. The number of bricks used in the erection was 440,000.

Rotherham.—The engines at the new waterworks have been set a-going, and water for the first time introduced into the new mains and works. The works of drainage are also now on the point of completion. The water-works pumping station at the river Don consists of a covered reservoir for 200,000 gallons; two condensing steam engines, with pumps and four boilers, to supply the motive power; engine and boiler house, &c. Two service reservoirs have been made, one at Boston Castle, nearly 300 feet above the lowest part of the town, and the other at the highest part of the village of Kimberworth. The whole district to be supplied lies between the pumping station and the two reservoirs; and the mode of supply will be to raise the water at the pumping station to the level of the reservoirs, and from this level send it through the district by means of cast-iron street mains, already laid. The surplus will pass into the service reservoirs as a store, whence it will return for the supply of the town during the night, on Sundays, and at other times when the engines are not at work, so that the supply will be permanent. The Boston reservoir will contain 600,000 gallons, being a supply for a day and a half at the rate of twenty gallons per head per diem, for a population of 20,000,—a number which much exceeds the present population of Rotherham and Masbro'; and the Kimberworth reservoir will contain two days' supply for that village.

Rossendale.—The reservoir at Higher Stack, nearly a mile from Bacup, on the Rochdale-road, is now nearly completed. Its dimensions are—length, 453 feet; breadth, 330 feet; depth, 25 feet. It is calculated to contain nearly eight hundred millions of cubic feet. Its embankments are 150 feet broad at the bottom, narrowing to 14 feet at top. An auxiliary reservoir is formed on the other side of the valley, draining Stubby Lee Moss and Lee Wood. The waters are conducted through an iron aqueduct, 18 inches in diameter, to the principal one.

CHURCH-BUILDING NEWS.

Oakengates.—The first stone of a new Methodist Reform Chapel was laid there on 30th ult. The building, which will be plain and rather small, after a design by Mr. Davies, is to be raised by Mr. J. Millington, of Ketley, at a cost, we believe, of 260*l.* The work is to be superintended by Mr. J. Peplow, of Oakengates.

Boston.—The cemetery at Boston, in Lincolnshire, has been consecrated. The cemetery contains about twelve acres of land. The buildings consist of two chapels and a lodge. The chapels, which are 200 feet apart, are in the late Decorated style: the walls are built of white bricks, and the open parapets, pinnacles, spire, window, and other dressings of Ancaster stone. Each chapel has a tower and spire, 70 feet high. The label terminations, and the corbels and bosses of ceiling were carved by Jackson, of York. The cost of the chapels is about 600*l.* each. The lodge contains a board or waiting room, two living and three bed rooms, and is built of red bricks, with stone dressings. The buildings were erected from the designs of Mr. Pritchett. Messrs. Baker and Sons, of London (late of Sleaford), were the contractors.

Chelmsford.—A site for a Church of England Cemetery for the town of Chelmsford, has been selected on the Broomfield-road, and about 1,000*l.* have already been subscribed for the purpose, the list being headed with 200*l.* by the rector. It is not intended to erect a chapel for the present.

Romsey.—The first stone of the new vicarage house was to be laid on Monday or Tuesday last, by Lady Palmerston.

Brighton.—After a lapse of two years, says the *Brighton Herald*, a monument has been erected to the memory of the Rev. F. W. Robertson, over his grave, in the Brighton Extra-Mural Cemetery. The expense of this work (about 180*l.*) has been defrayed out of a public subscription. The stone-work of the monument is very simple, being composed of four large upright slabs of Anston stone, surmounted by a larger block of same material,—in height, about 8 or 9 feet. The first impression it produces is one of disappointment, suggestive of the want of some crowning object. There are two electrotype medallions inserted in the stone, descriptive of phases in Mr. Robertson's public career.

Newton-le-Willows. — On Sunday in week before last, St. Peter's Church, Newton-le-Willows, was re-opened for divine service, after undergoing various repairs and decorations. It has been reseated throughout; new windows of cathedral glass have been inserted; and an east window of stained-glass has been given by the Rev. Peter Legh, the incumbent. It is expected that two memorial windows will also be contributed.

Headcorn.—The restoration of Headcorn Church, under Mr. Joseph Clarke, has been completed, and the church re-opened. An entire new roof has been placed over the south chancel, and covered with lead; it is divided into bays, and panelled with moulded principals and cross timbers; the roof over the south chancel has been taken off, and restored. The tower arch is thrown into the church by the ugly gallery being removed. The chancel roof is new, and boarded in oak under, and divided into diagonal panels by moulded ribs. The square pews which filled up the chancel, are removed, and oak stall seats substituted. The south aisle and a part of the nave have been reseated with open benches in pitch pine. Mr. W. Giles, of Ashford, was the builder.

Kingston.—The parish vestry of Kingston, says the *Taunton Courier*, having resolved to thoroughly repair and restore the church, and to raise the necessary funds by a church-rate, the execution of the work has been entrusted to Mr. R. White, of Taunton, surveyor, who, we understand, will commence operations immediately.

FRANCE.

We learn from the French newspapers that the new building just finished on the Boulevard Mazas near the Barrière du Trône, intended by the Empress for an educational establishment, has just received the following inscription over its principal entrance—"Maison d'Education pour les Jeunes Ouvrières, fondée en 1855 par Sa Majesté l'Impératrice Eugénie."——Twenty-seven out of the sixty statues which are to ornament the terraces of the new Louvre have already been placed in the positions which they are to occupy.——The first stone of the Musée Napoléon, at Amiens, has been laid.——It is said that the cost of the lighting of Versailles during the splendid *fête* given to her Majesty was 6,520*l.* The ball given at the Hôtel de Ville cost 12,000*l.*——At a recent meeting of the Academy of Sciences, M. Dumas presented a work offered by the author. M. Le Play, head engineer in the mining department, and commissioner-general for the Universal Exhibition, the title being "Researches concerning the Labour, and Domestic and Moral Condition of the Labouring Classes in Europe." More than 300 complete statements of the situation of labouring families, selected in countries beginning at Cadiz, and including Siberia, thus embracing every situation in Europe, have been collected and minutely investigated by M. Le Play.

COMPETITIONS.

The Birmingham and Midland Institute.—The committee have selected the design of Mr. E. M. Barry. It is in the modern Italian style. The local journal says, a rusticated base on the ground-floor supports a façade of slender pilasters, crowned by an entablature and cornice, the windows being decorated, but there is an almost entire absence of shadow, arising no doubt in a great measure from the form and confined nature of the ground, and this will be observable in a greater or less degree in all the designs with one or two exceptions, and is moreover an evil we must be content to bear when we consider the price of land in the very heart of such a town as Birmingham. The centre of the main front and the sides of the wings in Paradise-street, rise a story higher than the rest, and in the north and south elevations form imposing entrances to the Industrial Department and the Department of Ornamental Art, the latter fronting to Paradise-street. As this end is also placed the Theatre, which is of a quadrantal form, following the sweep of the ground. In the lobby of the entrance to this theatre is a staircase leading to the Department of Ornamental Art. The grand entrance to the General Department is in the centre of the façade, parallel to the side of the Town-hall, and consists of a portico of five arches, leading into a loggia and grand staircase, with corridors traversing the entire length of this portion of the building. Right and left on the ground-floor are arranged a museum, a repository for mining records, a meeting-room, and committee-room; on the first-floor, a library, news-room, and museums. The Industrial Department is entered in Edmund-street, and in that portion of the plan of the building, when completed, is a coffee and club-room of a semi-circular form, the ceiling supported by Corinthian columns. The various class-rooms are situated on the upper floors. The communication throughout appears to be well kept, with a trifling exception, which an unimportant transposition of a few rooms would easily remedy.

The Milton Club.—A limited number of invited architects are now making designs in competition for a hall for the Milton Club, Ludgate-hill. Each competitor will be paid a certain sum for office expenses.

Gratuitous Plans.—Some of your correspondents seem to be indignant with a committee, who recently advertised for gratuitous plans for a chapel, and one of them considers that this may probably mark the commencement of a new era in competitions; it is, however, only a vigorous carrying out of the old system. Of course it would be impossible to say whether so economical an advertisement will be responded to; but if a guinea had only been held out as a prize, the advertisers would have secured more plans than they could ever have done justice to. It seems, therefore, under these circumstances, unfair to blame committees, who, after all, only discharge faithfully the trust committed to them; for if they employed an architect, and paid him a commission, they might fairly be asked why so much money was paid for a single set of plans, when a mere fraction of the amount judiciously expended might have produced twenty. The cause is, as I have before attempted to point out in your journal, that there are three times as many architects in the kingdom as can live by their profession. Architects as a rule are recruited, unlike some of the other professions, from among the humbler walks of life; their slender patrimony, if they possess one, is often unable to support them

during long intervals that elapse between their employment; and hence it is, that the smallest premium always brings such a deluge of designs. If committees, therefore, can procure plans, and those often good ones, so cheaply, they will certainly continue to do so, and all indignation-meetings, or protests, and all the unkind things that can be said regarding them, will be so much lost labour; for to all this, their unanswerable reply would still be, if they chose to trouble themselves about the matter, that while they could obtain designs in such overwhelming numbers to choose out of, and that so very cheaply, they would not foolishly to pay a much larger sum of money for a single set of drawings. It might be well, therefore, if some of your correspondents who seems so anxious to remedy matters, would turn their attention to the real source of the evil, and for the present expend no more time in philippics against committees.—A. R.

WASH FOR OUTSIDE WALLS.

Your correspondent, "T. W." in a previous number, inquires for a cheap and durable substitute for paint on outside stucco.

Such an article is extensively used in this part of Devonshire, and is prepared in the following manner:—To a half bushel of stone lime put one gallon of raw linseed oil, the lime to be first wetted with sufficient water to cover it completely over, and the oil to be added when in its boiling state. It can be tinted according to taste with any common colours. The above ingredients are sufficient to colour at least 500 yards. Care should be taken to clean the surface well before using the colour. If two coats of the colour be given to the wall, it adds much to its beauty and durability.

The above, if mixed and laid on with care, will stand the weather, and keep its appearance equal to paint for three or four years. W. A. G.

I will solve the secret (but not with soap) of mixing oil with water-colour, thereby rendering it much more durable and impervious to wet: it is by mixing fresh quicklime with hot water gradually, till it becomes the consistence of thick cream; if boiled linseed oil be now added while it is hot, and well stirred, it will become perfectly amalgamated; sufficient water is now to be added, to make it a proper consistence, and it may be coloured with a little umber, yellow ochre, and Venetian red.

For rough work, gas tar may be substituted for boiled oil, the smell of which will be gone in a few days. This does not require any colouring.

White lead or paint is expensive and useless.

Chemicus.

HUTS FOR THE CRIMEA.

Messrs. William Cubitt and Co. of the Gray's-inn-road, and other large firms, have been for some weeks past employed in preparing portable huts for the Crimea, in accordance with the plans of the Board of Ordnance, by which the huts being built in sections or compartments can be packed in a comparatively small space, and can be easily put together by simple contrivances. A considerable portion of them are finished and shipped, and the rest are advancing to completion with a rapidity which must astonish all who are unacquainted with the appliances of a large building establishment.

There are different kinds of huts to be sent out, some of which are covered with a single thickness of boarding, and the others with a double thickness.

The single boarded huts are 32 feet by 16 feet, and 76 feet by 16 feet, in the clear, and will accommodate respectively twenty-two and fifty men. The sides are prepared in panels, 6 feet high by 4 feet wide, composed of rough framing, covered with weatherboarding. These are secured together by means of screw bolts and nuts. The sills at their junctions lie in cast-iron shoes. A certain number of these side panels are prepared with small frames, in which sashes are hung on centres, by which light is admitted to the huts. Each end is formed of five compartments, the centre one being a door-frame and door, with hinges and lock; those on either hand being panels of framing, and weatherboarding bolted together; above these, bolted to the head-pieces, are two spandril-shaped frames, to form gables, covered with weatherboarding, and bolted together. In each spandril is a small frame, filled with louvres for ventilation. The roof is formed of similar panels, 9 feet 6 inches long by 4 feet wide, the tops bolted together, and the feet bolted to head of sides; the joint at top is made weather-tight by a saddle-back ridge, which runs the whole length of hut. The side pieces of roof panels or rafters are bolted together, and at each edge a fillet is nailed, standing up above the boarding,—two fillets being thus close together; at the joint are covered by a solid grooved capping to keep ont the wet. Ventilation is obtained on the roof by cutting square holes at the top of corresponding panels in the boarding only, and nailing fillets on the raking sides of the holes: pieces of zinc are then nailed over the openings, leaving a narrow orifice at bottom for ventilation. The roof is tied together by collars, one to each panel, bolted to rafters. The flooring of these huts is prepared in panels, 5 feet 4 inches by 4 feet, formed of two thicknesses of ⅞ in. boarding, nailed together. These panels are notched where necessary, to fit the upright timbers of hut, and are nailed down to sill of sides and ends and to two sleepers, which divide the floor into three longitudinal compartments or bays of 5 feet 4 inches each.

The interior of these huts will be covered with sail-cloth hung to hooks.

Another description of hut is 76 feet long by 16 feet wide, and is to accommodate fifty men. The sides are divided into nineteen bays, 4 feet wide each, by posts, 4 in. by 3 in. those at angles being 4 in. by 4 in. tenoned at each end, grooved for panels. A head and sill run the whole length of hut, the former mortised to receive posts, the latter mortised for posts and grooved for panels.

The panels are formed of weather-boarding, with an inner lining of ⅞ upright boarding nailed in. The inner lining projects beyond the weather-boarding all round, thus forming a tongue which fits into the groove in posts and head, and the weather-boarding fits exactly the space between posts, &c. Five of the bays in each side have sashes and frames. In these the panels fit in under sill of sash-frame. The ends are divided into five bays by similar posts, with head and sill, the centre bay having a door and frame, two bays on either hand being filled with panels similar to those at side. The gables are in all respects similar to those of huts Nos. 1 and 2, and are bolted to head-pieces of end-framing.

The roof is formed of skeleton frames composed of rafters, head-sill, and purlins, each pair of corresponding frames being tied together by a collar bolted to the rafters. The sills of these frames are bolted to head-piece of side-framing, and the tops are secured together by hook-and-eye fastenings. On each of these roof-frames are laid two panels formed of weather-boarding lined with ⅞ boarding, and having sheets of felt between the thicknesses. The horizontal joints between the two panels are made water-tight by a strip of sheet-iron lying under the weather-boarding of upper panel, and overlapping that of lower one. The panels are secured to purlins of roof-framing by thumb-screws and plates, the raking joints of roof panels and ridge are made weather-tight in the same manner as to the other huts. Ventilation will also be obtained to these huts as to Nos. 1 and 2. The flooring is exactly similar to that described for Nos. 1 and 2.

A fourth description of hut is intended to accommodate eight officers. It is constructed similarly in all respects to No. 3, and differs only in size and arrangement. It is 36 feet by 20 feet in the clear, and is divided into two main compartments by a transverse central passage having a door at each end. The partitions forming this passage are of grooved posts, head, and sill, as before described, filled in with 1 in. ploughed and tongued boarding, ledged. Each of the main compartments is subdivided into two chambers, suited for two officers each, and separated by partitions similar to those forming the passage. Each chamber has a door communicating with the passage and a sash as described to the other huts. The ventilation to the huts is similar to that already described.

THE METROPOLITAN DRAINAGE QUESTION.

HOW TO GET RID OF THE THAMES.

A tract, titled "The Improvement of the Drainage into and the Cleansing the Waters of the Thames," by Mr. George Burge, the contractor, has been printed, in which several modes of settling the Thames question are proposed. The first of these, so far as we can understand its rather curt phraseology, consists in an improvement of the drainage into the Thames by the purchase of all property below, or level with, high-water mark (as in Bermondsey, Lambeth, and Vauxhall, we presume), and filling it "up to a little above high water," so that continuous drainage in place of tidal would be secured by draining to high water mark only and not to low. "Millions of money," Mr. Burge remarks, would thus be saved. Connected with this scheme there are reservoirs and filter-beds, sewers to Barking-creek, &c., but nothing further so original as the filling up of the Surrey side. The next scheme Mr. Burge calls "the best and cheapest method of introducing railways into the City and suburbs of London," and it seems to consist in simply building a quay wall across the Thames, "from Queenhithe, Thames-street, to the point opposite on the Surrey side, and so to stop the water back on the east side," and "then to fill up the river from thence to Hammersmith, making sufficient space for all the various railways to run over this embankment." In thus virtually saying to the river on one side, and to the sea on the other, "Thus far shalt thou come, and no farther," Mr. Burge appears to have forgotten to state what he means to do with the river itself, unless it be that in incidentally remarking that it "can be made available for the supply of London and the vicinity," he considers that he has thus satisfactorily disposed of it. Our only fear is, that the "supply" would be *rather* superabundant, and scarcely satisfactory; but even though the Thames were really to be disposed of bodily and wholly, through metropolitan domestic half-inch pipes, the metropolitan population, large as it is, can scarcely be conceived to be capable of swallowing it all up in culinary purposes; and still, therefore, we should have to ask Mr. Burge what *are* we to do with it when we *have* done with it? The acute lad who is said to have stopped up the head spring of the river with his finger, and boasted that now he had astonished the Cockneys by drying up their river, seems to us to have suggested a better way of getting rid of the Thames than this. But seriously, Mr. Burge, a matter-of-fact and shrewd contractor, must have some intended mode of disposing of the river, whether by a deviation of its course into some new channel or otherwise; and certainly it is a very strange oversight to say nothing at all on a point so vital to his own vast scheme as this is.

Miscellanea.

Where are the Builders? — The *Harrow Gazette* says,—"The demand for houses at Harrow has never been so great as during the last year, and particularly the last two or three months. The class of houses generally required are those at rents varying from 40*l.* to 60*l.* Suitable building land can now be had, and it is a matter of surprise to us that parties do not come forward to build on a large scale, as we feel confident that the speculation would answer, and return a large rate of interest. Harrow is well drained, supplied with an abundance of pure spring water, and will shortly be lighted with gas. The London and North-Western Railway Company have liberally offered to the occupiers of all new houses erected here, of the annual value of 50*l.* and upwards, a free first-class pass to and from London for eleven years. Harrow for healthfulness stands second to no place in the kingdom, and its Educational Establishment is equally as pre-eminent."

The New Act to provide Dwellings for the Labouring Classes.—The Act for facilitating the erection of dwellings for the labouring classes was passed on the day of prorogation. The Act may be applied to the United Kingdom, except Scotland. The preamble states that it is expedient that facilities should be afforded for the erection of "healthful and commodious dwellings;" and with this view a company may be formed, by subscribing articles of association in the manner described. Every company incorporated under the Act is to be established for the purpose of providing dwellings for the labouring classes, with or without private gardens, or with or without common gardens, or places of common recreation for the use of the inmates of such dwellings, "and for no other purpose whatever." The regulations as to drainage, ventilation, and water, are set forth, to be approved of by the General Board of Health, whose officer is at all reasonable times to inspect the dwellings erected under the Act. Among the provisions is one authorising the imposition of fines if the dwellings are not kept in a proper condition.

Fire at Messrs. Baker's.—Very extensive premises and stock at New Stangate-wharf, Lambeth, belonging to Messrs. George Baker and Son, builders, were unfortunately destroyed by fire on Tuesday morning last.

Society of Antiquaries, Newcastle-upon-Tyne.—The September meeting of this society was held on Wednesday before last, at the Castle. Dr. Charlton reported, on the part of the sub-committee appointed to confer with the corporation as to the Black Gate, that it seemed to be the fixed intention of that body to build up and conceal this relic of antiquity, almost as much as before. The Duke of Northumberland had viewed the Black Gate as it now stood, and was very anxious, for the honour of the town and the sake of archæology, that it should not be again hidden, in building upon the space between it and the railway arches. The Chairman regretted to hear this report; and such was the general feeling of the meeting. Dr. Charlton submitted plans, prepared by Mr. Dobson, of the proposed room over the hall of the Castle, to serve as a Museum of Antiquities. It was believed, he said, by many of the members, that this would simply be a restoration of a room originally existing. The estimated cost was 134*l.*

THE LION-HUNTER.—The views with which Mr. Gordon Cumming illustrates his interesting and well-delivered lecture in Piccadilly, descriptive of his achievements, were painted by Mr. Harrison Weir, Mr. Haghe, Mr. Leech, and others, and although various in quality, are for the most part life-like and satisfactory. We should particularly mention elephants drinking at night. The exhibition as a whole, including as it does these views, the fine collection formerly in the Chinese Exhibition, at Knightsbridge, a graphic and startling account, some characteristic music, and the very extraordinary man himself, who is just as much at home in the drawing-room as in an African jungle, *tête-à-tête* with his "first lioness," cannot fail to be popular.

A TESTIMONIAL, in the shape of a service of plate, has been presented to Mr. C. J. Thicke, as founder of the British Mutual Loan Classes, by members of the classes. Mr. Hamber, who was in the chair, said the estimation in which the classes were held was proved by the fact of their having exhausted the alphabet in giving a letter to each class, and now, in addition, numbering to fifty, making advances daily to those who require them, in amounts equal to, if not exceeding, 1,000*l.* a week. We can say from personal knowledge that the testimonial was well deserved.

CAMBRIAN ARCHÆOLOGICAL ASSOCIATION.—The ninth annual meeting of this association was commenced at the Town-hall, Llandilo, on Monday, the 27th ultimo; on Earl Cawdor's proposal, Lord Dynevor took the chair, in the unavoidable absence of Mr. West, the president. The Rev. James Allen, general secretary, read the report of the committee, which was regarded as exceedingly satisfactory. The first paper was by Archdeacon Williams, on Carregcennan Castle, and was read by Mr Banks. The next communication was one from Mr. J. C. Westwood (read by the Rev. H. Longueville Jones), respecting the Inscribed and Sculptured Stones in the county. On Tuesday morning an excursion to Carregcennan, Llygad Llwchur, &c. took place; and in the evening a meeting was held, at which Mr. Babington gave an account of the objects examined in the morning, with his own views on them. The first paper read was by Mr. J. T. D. Llewelyn, on the opening of a cairn at Carngoch, north west of Swansea. Mr. L. Jones read a paper, by Mr. L. Parry, on Tre'r Ceiri, an ancient British fortress in Carnarvonshire; and Mr. T. O. Morgan read one on the Divisions, Ancient and Modern, of the County of Caermarthen. Mr. L. Jones also read a paper on the Armorial Bearings of the Prince of Wales; and Mr. C. C. Babington one on Caercaregyfran, a Cyclopian Fort at the Pass of Llanberis, in Carnarvonshire. On Wednesday an excursion was made to the hills of Gogafou, to Cynwil-Caeo, Dolaucothi, and other places; and in the evening the president and Mr. Bury reviewed the proceedings of the day. Mr. Knight read a paper on Mining and the Gogafou Mines. On Thursday another excursion took place to Golden Grove, the seat of the Earl of Cawdor, and to Llanarthney and other places of interest; and on Friday the party proceeded to Garngoch. In the evening Mr. L. Jones read a paper on Offa's and Wat's Dyke; and Archdeacon Williams one on Garngoch.

THE O'CONNELL MONUMENT IN GLASNEVIN.—A fresh impulse, we hear, has been given to this work, and some of the outstanding subscriptions are at length beginning to come in. Great progress has already been made with the monument. The round tower has been carried to a height of about 100 feet, and its elevation will yet be considerably greater; but the round tower is only a portion of the monument as designed by Dr. Petrie. The expiatory chapel of ancient Irish architecture, and the stone cross of the ancient Irish model, form, it seems, indispensable features of the work; and to erect them the funds of the committee are utterly inadequate.

THE SUSSEX ARCHÆOLOGICAL SOCIETY AT WORTHING.—Last week a quarterly meeting of the Sussex Archæological Society was held at Worthing. The church of Broadwater, a fine Norman church, which is undergoing thorough restoration and repair, chiefly at the expense of Mrs. Thwaites, was the principal object of the archæologists. The choir is undergoing restoration, including a painted east window, sedilia, miserere stalls, &c. The works are being carried out by Mr. Charles Hide, architect, of Worthing. Mr. Hide pointed out to the assembled archæologists the peculiarities of the structure, and explained his *modus operandi* in bringing into their original position the walls of the choir, which had become 18 inches out of the perpendicular. At a meeting held at the Literary Institution at Worthing, for the despatch of business, Mr. Blaauw read an extract from a record, of the time of Edward I. respecting a valuation of goods at Sompting, near Worthing. Mr. Lower read a paper on the family of Miller, of Winkinghurst and Burghill, from materials drawn up in 1723.

CITY BATHS AND WASH-HOUSES.—The petition to the Mayor and Corporation, unanimously adopted by the Guardians of the West London Union, has been printed. The great social problem to be developed, it remarks, is the improvement of the lower orders of society, and the fitting of them to be that basis which shall uphold all above them in security and prosperity. Believing this firmly, it continues, the Guardians of the West London Union conceive that if, by this appeal, they should succeed in stimulating the Corporation of London to the erection of baths and wash-houses for their district, which is almost exclusively populated by the poorer and industrious classes, the richer mostly living out of town, they will be giving a direction to its revenues which will not only do honour to the Corporation, but confer a lasting benefit on the present age, and on distant posterity.

METROPOLITAN COMMISSION OF SEWERS.—At a recent meeting of the Commission, the secretary read letters from the churchwardens of St Paul's, Coventgarden, and from Mr. S. Hughes, a parishioner, requesting the commissioners to proceed with the works ordered to be executed in Bedford-street, and which had been stopped in consequence of the alarm as to the late outbreak of diarrhœa in Bedford-street. It was resolved that the works be immediately proceeded with. The house-drainage question is now in course of practical settlement under the Sewers (House) Drainage Act. At a late meeting of the commission, it was arranged that the works requisite in Castle-street and Nottingham-court, St. Giles's, belonging to a gentleman named Veal, should be done by the commissioners on estimates, by their surveyor, which were admitted on the part of the proprietor to be very moderate, and which it was agreed that he should pay. In another case in regard to drainage works requisite at No. 2, Short's-gardens, King-street, Longacre, the Court consented to make an order—the first, we believe, of the kind under the new Act of Parliament, for the payment of 66*l.* 11s. 4d. in this manner, namely:—4*l.* 8s. 9d. per annum for ten years, leaving the remainder, or 19*l.* 3s. 10d. to be liquidated after the expiration of the interest of the leaseholder, either by the owner of the property or by a successive holder of the lease.

NASMYTH'S WROUGHT-IRON CANNON.—The *Manchester Guardian* announces the failure of Mr. Nasmyth's monster gun, not on account of the mechanical difficulties which had to be encountered—formidable as they were—but from a most unexpected peculiarity in the material employed, when brought together in so large a mass as was necessary, and which consists in a process analogous to crystallization taking place within its substance during the protracted time of cooling, whereby the fibrous texture, from which it derives its tenacity, is destroyed, and it becomes even less capable than cast iron of resisting the explosion of a heavy charge of gunpowder. The experiment has consequently been abandoned. We are rather surprised at this result,—not that the sustained incandescence of so great a mass of iron should allow its particles to settle into a crystalline and brittle form, but that such should have been the method adopted, and that the experiment should have been abandoned on its failure. We had an idea that so immense a mass of ordnance as this was designed to be, would have been as it were built up, by help of the steam hammer, in twisted, tough, and well-worked layers, all welded together one after another, so that no great mass would have ever been at once in a state of long-continued incandescence. In this way it seems obvious that almost any amount of resistant power might be obtained.

GENERATING STEAM BY PEAT.—A series of experiments have of late been conducted at the engineering works of Messrs. Gwynne, Essex Wharf, Strand, to ascertain the relative power of peat in comparison with coke, when used in the generation of steam. The experiments were considered favourable to the use of peat, and one circumstance, it is said, was especially noticeable—the total absence of smoke, so perfect was the process of combustion, which would seem to indicate peat to be the fuel for general use where smoke-consuming furnaces have failed in operation, or where, owing to existing sanitary regulations, the use of coal is inexpedient and impracticable.

THE FIRST TIMEKEEPER MADE OUT OF CLAY.—M. Raby writes, from Paris, that this great industrial achievement was deposited at the Exhibition on August 22, and that it was inspected by the Queen and Prince Albert. All the works, plates, cogs, and wheels, are made of aluminium; and M. Raby believes it is much better for purposes of this kind than the other metals generally employed. It is much lighter, does not require so much power to conduct the wheels, and, therefore, with a heavy balance, will obtain a better result of regularity. It is very hard and smooth when hammered, and the friction will be reduced to almost nothing.

MR. GOURLAY, of Edinburgh, whose name is not unknown to our readers, offers six prizes, of twenty guineas each, for the best designs for carrying into effect certain proposed improvements. The designs requested are:—a cast-iron bridge from the Carlton Convening Rooms to St. James's-square; a level road from Prince's-street to the Grassmarket, tunnelled through the High-street; a level bridge from Prince's-street to St. Giles's Church, with an opening into Bank-street; a quadrant from John Knox's Church, extending along the north slope of the High-street to the blind arches of the North-bridge; an alteration of Castle-terrace, involving the demolition of several buildings; a bridge from the Carlton-hill to Ireland's Woodyard, where Mr. Gourlay proposes to place Trinity College Church.

ELECTRO-TELEGRAPHIC PROGRESS.—A project has been submitted by Signor Bonelli, of Turin, to the Governor of Malta, and by him to the British Government, to execute in two months, at the expense of 10,000*l.* the junction of Malta with Cagliari, in Sardinia, by one of the telegraph cables of his own construction. Lord Panmure has requested to be informed, without loss of time, what portion of the estimated amount would be contributed by the island treasury. Signor Bonelli has also proposed a more extended plan of operations, by continuing the chain to Candia, and from thence two branch lines,—the one to the Dardanelles, the other to Alexandria, in Egypt. This latter course would, it is estimated, require 60,000*l.* and six months' time.

TENDERS

For additions and alterations to be performed at Nos. 15, 16, and 17, Cheapside, for Messrs. Welch and Margetson. Messrs. Tillott and Chamberlain, architects. The quantities supplied:—

Myers	£5,300	0	0
Holland and Co..	5,148	0	0
Piper and Son	4,840	0	0
Brown and Co.	4,594	0	0
Haynes and Eyre	4,590	0	0
Brass and Sons	4,536	0	0
Rider	4,240	0	0
Lawrence and Sons(accepted) ...	4,185	0	0

For building Offices and Sanitary Show-rooms, for Mr George Jennings, on his Wharf, Holland-street, Blackfriars:—

Friend	£1,845	0	0
Marsland	1,831	0	0
Rider	1,810	0	0
Lawrence and Sons	1,794	0	0
Taylor and Co.	1,775	0	0

For alterations to Seven Houses at Clapham-road, for Mr. W. H. Smith. Mr. Benham, architect. Quantities by Mr. Carter:—

I'Anson	£1,986	0	0
Fox	1,900	0	0
Brown	1,867	0	0
Curtis	1,826	0	0
Wilson	1,771	0	0

ADVERTISEMENTS.

BOROUGH of GATESHEAD.—To ENGINEERS and SURVEYORS.—Notice is hereby given that the Office of SURVEYOR and INSPECTOR of NUISANCES to the Corporation of Gateshead will become VACANT on the 11th NOVEMBER next. Candidates for the appointment may forward testimonials of qualification and competency, addressed to the Town Clerk, Townhall, Gateshead, before MONDAY, the 29th day of OCTOBER next, on which day the Committee appointed by the Corporation will meet at TWO o'clock in the afternoon, to receive and examine applications and testimonials of candidates. The duties of such Surveyor will comprise the usual business of the Corporation, including that of the Local Board of Health and the Gateshead Quay Commission. A candidate must be familiar with the practice of engineering in connection with works of water supply, gas, drainage, sewerage, and surface cleansing—competent to conduct surveys, prepare plans, drawings and estimates of works of every description, and able to superintend the execution thereof; test the materials, and see to the fulfilment of the conditions of the contract for executing such works. The whole time of the Surveyor is to be devoted to the duties assigned to him and he is to be restricted from undertaking any other employment. Salary, £300 per annum.—Candidates are to state their ages in their applications, but are not required to attend personally before the committee, unless specially summoned. The successful candidate is required to give security for the faithful discharge of his duties by the bond of himself and two sureties in 500*l.*—*By order,*

G. J. KENMIR, Town Clerk.

Town-hall, Gateshead, August 29, 1855.

GLASS TRADE.—WANTED, a Person who has experience in the Trade, as TRAVELLER, in Town, and elsewhere, as occasion may require.—Address, by letter, to the first instance, stating qualifications, reference, &c. to A. B. C. Office of "The Builder."

J. McLANDSBOROUGH, CIVIL ENGINEER and SURVEYOR, of 34, Queen's-gate, Bradford has a VACANCY for an ASSISTANT, qualified for field and office duties. He must be a neat draughtsman, as well as a good surveyor and leveller. If experienced in construction, and accustomed to sewerage and waterworks, will be preferred.—Address as above, stating age, terms, &c with testimonials enclosed.

TO BUILDERS' CLERKS.

WANTED, in a BUILDER'S OFFICE, a respectable Young Man as CLERK. None need apply but those who have been engaged in a similar capacity, and have had some practic l experience at the bench. Apply by letter only, stating age, salary required, and where last engaged, to C. B. Office of "The Builder."

WANTED, a CLERK of WORKS, to undertake the erection of a building in the country. Apply by letter, addressed A. B. Office of "The Builder," stating salary and references.

TOTTENHAM-GREEN, Eastern Counties Railway.
PUTNEY, South Western Railway.
RECTORY ESTATE, EALING, Great Western Railway.
The WADDINGTON ESTATE, ENFIELD, Eastern Counties Railway
WOOD-GREEN, Green-lanes, Hornsea, Great Northern Railway.
OLD FORD, Stratford, Eastern Counties Railway.
Part of the purchase-money may remain at 5 per cent. interest. Parties assisted in the building of their own residences. Several Plots to be Let on Building Lease. Money advanced to respectable parties. —Apply to Mr. GEORGE MORGAN, 5, Chancery-lane.

MAITLAND-PARK, HAVERSTOCK-HILL, Hampstead-road.—LAND-TAX REDEEMED.—To BE LET, upon Building Leases for ninety-nine years, from Christmas 1855, de-irable BUILDING PLOTS on the above Estate. The continued demand for houses in this locality, and the picturesque position of the property adjoining the grounds of the Normal School, Camden-road Villas, is a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—For terms and to view plans apply to the Secretary of the Orphan Working School, 32, Ludgate-hill; Messrs. FIELD and CHAMBERLAIN, 36, Basinghall street; the Architects, Messrs. WEBNERT and ASHDOWN, 49, Charing-cross; or at the Porter's Lodge, on the Premises.

ST. MICHAEL, CORNHILL.—TO LET, upon building leases, for a term of sixty-one years, the SITES of the NORTHERN PORTION of the GEORGE and VULTURE TAVERN, and Nos. 6, 7, 8, an 1 9, on the south side of St. Michael's-alley, Cornhill.—The Churchwardens and Committee of Overseers will meet in the Vestry-room, in St. Michael's Church, Cornhill, on THURSDAY, the 20th SEPTEMBER, at TWELVE o'clock precisely, to receive TENDERS from parties desirous of taking the above sites, which are divided into two lots. The terms and conditions may be seen, or printed copies of the same obtained on payment of 1s. upon application to Mr. W. A. MASON, Architect and Surveyor, Great St. Helen's; or to Mr. HENRY HOPPE, Vestry Clerk, Sun-court, Cornhill. Parties Tendering must send in Tenders to the Vestry Clerk on or before the 19th SEPTEMBER, under cover addressed to the Churchwardens, and indorsed "Tender for Ground in St. Michael's-alley," and must be personally in attendance at ELEVEN o'clock on the 20th SEPTEMBER. The churchwardens and overseers do not bind themselves to accept the highest or any other Tender. Should any Tender be accepted, the party Tendering will be required thereupon to sign a memorandum, a form of which may be previously inspected upon application to the Vestry-clerk.

LOWER THAMES-STREET. — TO BE LET, by Tender, by the Worshipful Company of Armourers and Brasiers, on a lease for Twenty-one years from Midsummer, 1855, the extensive Premises known as the GLOBE-YARD WAREHOUSES, situate in the above street, nearly opposite the Custom-house. The lessee will be required to pay all taxes and rates, including sewers and militia rates, and all assessments for sanitary purposes, and the expense of fire insurance, the land-tax being redeemed; and the lease will contain all covenants usual in the Company's leases. Sealed Tenders to be delivered at Armourers' Hall, Coleman street, on or before the 3rd OCTOBER next, where parties making the same are required to attend the following day, at HALF PAST TWO o'clock. The Company do not bind themselves to accept the highest or any other Tender.
JOHN PONTIPEX, Clerk.
2, St. Andrew's-court, Holborn.

TO BE LET, in consequence of the proprietor retiring from business, on lease, for a term of years, with possession in a short time, a well-established PREMISES, LAND and BUSINESS, where a large and successful trade has been carried on for thirty years, with excellent store sheds, steam saw-mill, and private wharf, most advantageously situated in the centre of a large and improving town in the midland counties. A part, or the whole of the stock can be taken at a valuation. The premises are well adapted for carrying on a large building trade—For further particulars, apply by letter to W. B. Office of "The Builder."

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing the largest sorts of English Timber, &c Spacious Dry and Drawing Docks 30 and 10 feet Cranes, Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to D. NOKES and Co. as above.

WORKSHOPS near REGENT-STREET. TO BE LET on LEASE, EXCELLENT WORKSHOPS (frontage 34 feet, depth 90 feet), with liberty to erect a Steam-engine, and to carry on any kind of business or manufacture, regardless of noise.—Apply to Mr. FINNIS, Auctioneer and Valuer, 63, Great Russell-street, Bloomsbury-square.

LEIGH, ESSEX.—TO BE LET, a PLOT of GROUND, sufficient for ten houses, and 180 feet deep, on a lease of ninety-nine years, commanding a good view of the sea, and in the best part of Leigh, one minute's walk from the railway station For particulars, apply to Mr. R. L. CURTIS, Surveyor, 1, Riches-court, Lime-street, City, and of D. MONTAGUE, Esq. Leigh.

TO BE LET, unfurnished, with immediate possession, by the year, or for a term, commodious PREMISES in Fetter-lane, Holborn, with or without yard and stabling, well adapted for chambers and offices, or for a large business or warehouses. Apply to Mr. MASKELL, General Railway Office, Fetter-lane, Holborn, between the hours of TEN and THREE

TO BREWERS, HOTEL-KEEPERS, AND OTHERS.

TO BE LET, a commodious HOUSE, situate at Leigh, Essex, commanding a good view of the sea, about half way up the hill, and near to the railway station with outbuildings, extensive garden and yard, well adapted for a genteel hotel, with tap-house, stables, &c. the whole occupying a space of about 3½ roods.—For particulars, apply to Mr. R. L. CURTIS, Surveyor, 1, Riches-court, Lime-street, City, and of D. MONTAGUE, Esq. Leigh.

TO BUILDERS.

PUBLIC-HOUSE PLOT at Camberwell.—TO LET, with advances, a corner PLOT of GROUND, especially allotted for a public-house. Situation first-rate, and a license almost certain. Several houses now being erected in close proximity with it. To a respectable man liberal advances will be made.—For plans and further particulars, apply to Mr. CLARKSON, Surveyor, &c 48, Penton-street, Pentonville.

TO BE LET, large MANUFACTURING PREMISES, with good house attached to the same, in Baker-street, Bagnigge-wells-road.—May be viewed by application on the premises.

TO BUILDERS and OTHERS.—TO BE LET, at a moderate ground-rent, TWO eligible PLOTS of FREEHOLD GROUND, on which two houses are partly erected, situated at Upper Holloway. A quantity of burnt ballast to be sold cheap.—Apply to Mr. J. ROBSON, Builder, 30, Castle-street, Oxford-street.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

This Paint possesses in an eminent degree the following advantages over all other known Pigments:—
INDESTRUCTIBILITY BY HEAT—PRESERVATION OF IRON FROM OXIDATION, WOOD FROM DECAY, AND MASONRY AND BRICKWORK FROM DAMPNESS—PERMANENCE OF COLOUR AND FREEDOM FROM DELETERIOUS PROPERTIES—SUPERIORITY OF BODY.

The Protoxide Paint, as at present produced, is of one shade of colour, viz.:—a pale drab, but it may be tinted with any other colour to suit the taste and purpose for which it may be required. It is not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind, and is therefore well adapted for the interior of Ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.—Sole authorized Agents for England:—

MESSRS. C. GRABHAM AND CO. 4, BARGE-YARD, BUCKLERSBURY, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—PULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in use market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

PULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLANCHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it vastly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the same with those and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccos dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lime, Lath, Laths, Slates, and Slate Slabs. Fire-bricks, Grindstones, Cement Ch mney-tops, d.tto Vases, Ridging, &c. Paints, Stucoo, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his Works, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Course	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone.—CHARLES RICHARDSON, 6 South Wharf, Paddington.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.

IN EVERY VARIETY.

SOUTHAM BLUE LIAS LIME and PORTLAND CEMENT WORKS.—OLDHAM and TATHAM are now prepared to receive orders from contractors, builders, and merchants for Grain and Lump Blue Lias Lime, also for Portland Cement and Lias and Bath Cement, both of which will be found of very superior quality, and will be improved by the addition of two or more parts of sand to one of cement. 40. and T.'s boats can run alongside any wharf or works, and all orders addressed to Warwick will receive prompt attention.—Office, Warwick.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. T. H BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask. Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

Agents in London.—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is free from grit on the improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SPONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and RENOUGH, Manufacturers and Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

TO CAPITALISTS, POTTERS, CHINA, BRICK, AND TILE MAKERS, AND LANDOWNERS NEAR RAILWAY STATIONS.

HANDS'S GREAT ECONOMISING PATENT KILN.—Capitalists and Persons engaged in the above Works, Owners of Land containing Brick and Tile, or any other valuable Earth near Railway Stations, are particularly invited to look at HANDS'S GREAT ECONOMISING PATENT KILN. From its construction it enables persons to build one on any suitable spot where he pleases, so to economise the heat that all that GREAT WASTE and extra expense looked for as a matter of course in the old system is completely avoided, by causing the heat to dry and, and every description of strong moulded clays at any season, in time of burning and cooling the kiln, with perfect soundness. No cost required to keep up the works all the year round beyond the consumption of about six or seven tons of coals to burn off 20,000 goods in each kiln. Any persons desirous to avail themselves of this opportunity for a district or otherwise, may apply, if by letter prepaid, to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom, Surrey, where the Kiln is to be seen, by appointment only.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 69, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 8d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the Great Exhibition, mark the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 50s. per 1,000; floor bricks and 6-inch pavings, at 37s. 6d. per 1,000; 8-inch pavings, at 57s 6d. per 1,000; 9-inch pavings, at 72s 6d per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

DUTCH CLINKERS, 32s. per thousand, by the best Makers.

WELSH, STOURBRIDGE, AND NEWCASTLE FIRE-BRICKS, LUMPS, AND TILES, at much less than cost prices. The BUSINESS to be DISPOSED OF, with the valuable connections, and a portion of the PREMISES to carry on the same, TO BE LET, at almost a nominal rent.—For particulars inquire on the premises, Honduras Wharf, Bankside, Southwark, London.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—I. J. PEARCE and CO. Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 23s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 30s.; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Red Place, Red-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and dark, bricks, fire-goods, &c can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by traveling cranes, either into barges or carriages. Portland, Roach, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Lime, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

J. CHILLINGWORTH, Modeller and Letter Maker, respectfully invites the attention of the building public, to his well assorted stock of Enrichments in Composition, Cement, and Plaster, consisting of Bed Mouldings, Ceiling Flowers, Caps, Trusses, &c. &c. Workmanship first-rate, and charge low. Procuring letters in every variety of pattern, in wood or composition.—Specimens of letters as per Plate of "The Builder" Office, and in all the main thoroughfares of London.—Manufactory, 33, Francis-street, Westminster-road.

AGENCY WANTED.—WANTED, an AGENCY, by the Advertiser, for the Sale of Glazed-ware Pipes, Closet-pans, Stourbridge Bricks, Plaster of Paris, and Cement.—Address, in the first instance, to A. B. care of Mr. Cumner, Builder, Chippenham, Wilts.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 18 Wharf, Macclesfield-street North, City-road, for the sale of CHIMNEY-PIECES, and other articles useful architectural, and ornamental, invite Architects, Builders, and the trade generally, to inspect the same. A large assortment of fancy articles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham Estimates given, and orders promptly executed.
July 25, 1855. C. ADENEY, Secretary.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 20, Surrey-street, Strand.
HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa-Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden and Hall Statues, Vases, Tazzas, Consoles, &c. executed and delivered at reasonable rates.—For further particulars apply at the Offices of the Company, 16, Cannon-street, City.
WILLIAM W. BONNIN, London Secretary.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Harehill, Park Spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.
THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

TO SCULPTORS, MARBLE MASONS, and BUILDERS.—Now landing from barges at Whitehall-wharf, ex Conquest, from Leghorn, upwards of FIFTY BLOCKS of fine STATUARY (for figures) VEIN and SICILIAN. Mr. FRANKLIN begs to call attention to the above, also to his extensive stock of marble, in blocks and slabs, consisting of statuary, vein and Sicilian, Irish green and black, dove, Bardilla, Sienna, Brocatella, rouge royal, St. Anne's, Emperor's Red, black and gold, &c which he is enabled to offer on advantageous terms.—Depôt, Whitehall wharf, Parliament-street, Westminster, London.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, Kingscross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

PORTLAND STONE for SALE.—TO BE SOLD, in Lots of 100 cubic feet and upwards, a quantity of DRESSED PORTLAND STONE in large cubes, suited for builders and masons. On view at the PHŒNIX GASWORKS, Battersea, at Vauxhall, where particulars may be obtained on application, or at the Company's Principal Office, 70, Bankside, Southwark.

YORKSHIRE STONE.

GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.
GEO. VINT and BROTHERS will also be forward prices by post on application.—Address, Idle, near Leeds.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c at the new premises, Whitehall Wharf, Cannon-row, Westminster.

London Agents—HEGGLLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard. This Granite is selected for the New Westminster-bridge.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tanfield-place, Leeds.—To Builders and Buyers of the Best Quality.—Direct from the Quarries in truck-loads of five tons. Pavings, Landings got out to sizes, Steps, Copings, &c. &c. supplied on most advantageous terms by railway, and with despatch. Prices sent on application.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Builders, Contractors, and Others, that his Price Lists for Slates and Slab Work, can be had on application, enclosing a postage-stamp. Country and export orders promptly attended to.—N.B. A liberal discount to the trade.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.

ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate Cisterns made to any size. J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave place, Pimlico.

BANGOR SLATES, of all sorts and sizes; SLABS of all dimensions, and of superior quality. For prices and particulars, apply to J. EASTWOOD and SONS, Surrey Canal-bridge, Old Kent-road.—Export orders supplied promptly.

LLANGOLLEN FLAG and SLATE COMPANY.—The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag-Stone Company and the Llantysilio Slate Company, are now prepared to supply architects, contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description; Cisterns, Chimney-pieces, Baths, Filters, Leaders, Mangers, Ridging, and every other article made of this beautiful material, all of superior quality. The Llangollen Slabs, from their great durability, and the extraordinary size in which they can be obtained, are peculiarly adapted for the paving of railway stations, malthouses, breweries, generatories, warehouses, &c. A cheap variety of self-faced flags for street paving, &c. can be supplied at very moderate prices.—Prices and further particulars can be had upon application to Messrs. JOHN TAYLOR and SONS, 6, Queen-street-place, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, 4 Wharf, South Wharf-road, Paddington; or to Mr. GEORGE F. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's-park.

SLATING, 20s. and 21s. per Square, within five miles.—Address, HENRY MARYON, 36, Smith-street, Jubilee-street, Mile-end.

AUSTIN'S ARTIFICIAL STONE.—This material (frequently confounded with Portland Cement) has now been in extensive use among the highest class of residences for about twenty-five years. During that time a collection of Ornamental Work, such as Vases, Figures, and Fountains, has been accumulating, of which the public have scarcely any idea. Suffice it to say, that a single copy of each work would collectively form a row between 40 and 50 feet long. In consistence from Terra-cotta, and all other kind of Pottery, there is no distortion of form by the process of baking, and, instead of the glazed surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being waterproof.—AUSTIN and SEELEY, Nos. 15 to 4, Keppel-row, New-road, Regent's-park.
*** A large Stock of Ornamental Chimney-tops.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses and every description of Pavement laid down at the above low price, and the work guaranteed.
Apply to JOHN BILKINGTON, POLONCEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

ASPHALTE PAVEMENT, 2s. 3d. per square yard, 2½ inches thick, for footpaths, railway platforms, school yards, garden paths, &c. Carriage Roads: 3s. to 3s. 6d. per square yard. Railway Arches rendered waterproof, 2s. per square yard. Every description of pavement laid down, and the work guaranteed.—Apply to Messrs. WRIGHT and BROWN, 32, Bucklersbury, City.

SAND and GRAVEL FOR SALE, in any quantity. Also, a few ACRES of TURF.—Apply to Mr. WABE, on the Loughborough House Estate, Brixton. If by letter, direct to the White Hart.

O. MCCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

CROGGON and COMPANY, Manufacturers of PATENT ASPHALTE ROOFING, BOILER, RAILWAY, SHEATHING and INODOROUS FELT For Damp Walls, and Lining Iron Houses, 2, DOWGATE-HILL, LONDON.

BRICKS.—To Builders and Contractors.—Capital Hard-burnt GREY STOCKS, of good colour, at very reduced prices. Cash. J. F. SMITH, Further Field, Acton Bottom, near Shepherd's Bush.

BRICKS at ANERLEY STATION FOR SALE.
100,000 FINE YELLOW MALMS.
200,000 FINE YELLOW STOCKS.
100,000 HARD COMMON STOCKS.
100,000 PLACE BRICKS.
Inquire personally of the Station Master, Anerley Station, Croydon and Epsom Line; or by letter, to A. Z. Anerley Station.

TO AGENTS, BUILDERS, CONTRACTORS, &c.—On SALE, about 30,000 good ROOFING TILES, together or in lots to suit purchasers. The yard is situate near the Madeley Station, London and North Western Railway, from whence goods may be forwarded to any part of the kingdom. Address, Ridge hill Brick and Tile Company, Madeley, Newcastle-under-Lyme.

BRICKS.—Builders wanting Bricks of good colour, are solicited to call on E. PARKS, Lewisham, and get the quality at low prices. Kilns within six miles on the most reasonable terms. Red facing bricks at 30s. All kinds of tiles, paving bricks for oven building, salt glazed stone pipes manufactured; also all kinds of red pipes and pots.—Application by letter punctually attended to.

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, at very low prices, a large quantity of very hard BUILDING BRICKS, TILES, and PAVING WARE; also, 3, 4, 6, 9, and 12 inch red Socket Drain Pipes, in 2 feet lengths.—Apply to St. JOHN HEWITT, Redhill Works, Southampton.

FOWLER'S
IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, at 15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION, in various plain and ornamental patterns, for squares and market-places, parks, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

ON SALE SINGLE PUMPS, BARRELS AT SHORTEST FOR HAND STEAM

AND HIRE, AND DOUBLE 3 in. to 15 in. to any depth, NOTICE, OR POWER.

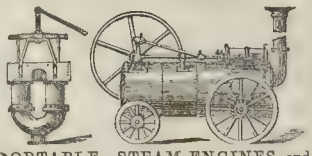
Wrought-iron Pails, Galvanized or Painted.

Pulley Blocks of every description.



BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition, and will be found to be a different material to that now being imitated by puffers and manœuvrers, with only three or four years' experience, and without practical knowledge. Some of the works recently completed by M. H. B. can be referred to the whole of the embellishments to the external part of Cliden House, his Grace the Duke of Sutherland's; also Tottenham and Kingsland Churches, the turrets to the Camden-road Chapel, containing from 3,000 to 4,000 feet cube; the colossal Britannias, 13 feet high, at the County Fire Offices, Cornhill and Lombard-street; the Arms, with the allegorical group, at the Kent Mutual Insurance, Queen-street; and other works elsewhere, too numerous to mention. A large Stock of newly-cast Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

TO CONTRACTORS.

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10-horse, 12-horse, 16-horse, 20-horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work.—Apply to Messrs. MEDWIN, HALL, and CO. Engineers, 93, Blackfriars-road, Sole Patentees and only Manufacturers.—N.B. Any of these Engines may be purchased.

STEAM-ENGINE WANTED.—WANTED, a 10 or 12 horse ENGINE, on one frame, boiler separate, ready for immediate work.—Apply to HUNTER and ENGLISH, Bow, near London.

TO CONTRACTORS and OTHERS.—For SALE, two excellent NARROW GAUGE LOCOMOTIVE ENGINES, in thorough repair, and may be seen at work.
No. 1.—A FOUR-WHEELED COUPLED ENGINE, by Banks. Diameter of wheels, 6 feet 3 inches; cylinders, 13 inches; stroke, 22 inches.
No. 2.—A FOUR-WHEELED COUPLED ENGINE, by Hawthorne. Diameter of wheels, 5 feet; cylinders, 14 inches; stroke, 22 inches.

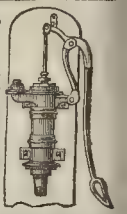
HENRY DOULTON AND CO. MANUFACTURERS OF GLAZED STONE-WARE DRAIN-PIPES.
MANUFACTORIES: HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; AND SMETHWICK, NEAR BIRMINGHAM.
OFFICES: HIGH-STREET, LAMBETH, LONDON.



TWENTY-ONE LARGE AND IMPORTANT TOWNS HAVE BEEN DRAINED WITH DOULTON'S GLAZED STONE-WARE PIPES, *and in no case has the slightest failure occurred.*

Messrs. D. and Co. do not publish Testimonials, but references can be given to any of the Engineers and Surveyors under whom they have executed works. DRAWINGS, WITH PRICES, MAY BE HAD ON APPLICATION AS ABOVE.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP, which is recommended for the simplicity of its construction, and the ease with which it works.
By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.
Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.
JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

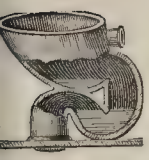
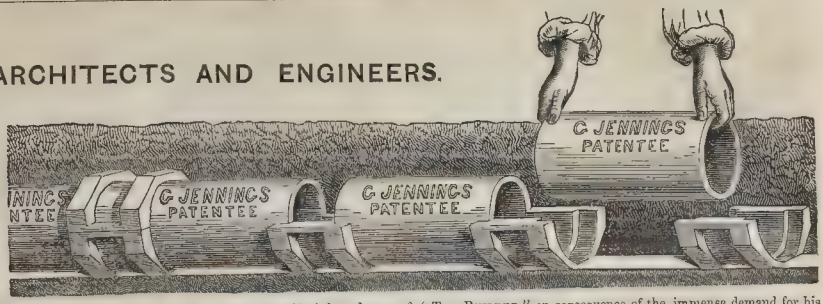
Drawings and List of Prices will be forwarded free on application.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.



PRIZE MEDAL, CLASS 2.
HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.
The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.
Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.
THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO ARCHITECTS AND ENGINEERS.

GEORGE JENNINGS has not for the last four months availed himself of the columns of "THE BUILDER," in consequence of the immense demand for his Sanitary Inventions generally, but he begs to inform his Patrons, that the Engineering and Sanitary Depôt he is now building on the BANKS OF THE THAMES, HOLLAND-STREET, BLACKFRIARS, will enable him to complete all orders with despatch, and exhibit all Improvements calculated to promote Sanitary Progress.

In the mean time he would observe that Closet-pans, unless they have a LARGE WATER SURFACE, are not WATER-CLOSETS, and that the above Drain-pipes, with all the advantages they offer as regards EXAMINATION, and the introduction of JUNCTIONS, can be had at the same prices charged for the old-fashioned Socket or Half-socket Pipes.

Illustrations, Descriptions, and Prices of Jennings's Sluice-valves, Fire-cocks, Closets, Drain-pipes, Urinals, Lavatories, Shop Shutter-shoes, &c. &c. can be had on application (or sent free if two stamps are inclosed) to GEORGE JENNINGS, Sanitary Engineer, Great Charlotte-street, Blackfriars.

References to One Hundred Public Works now in hand.

REDUCTION IN THE PRICE OF CLOSET-PANS.

DOULTON AND WATTS,
LAMBETH POTTERY, HIGH-STREET, LAMBETH,
Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to
5s. 6d.

These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of Closet-pans.

WILLIAM NORTHEN'S

Trap, 2s.

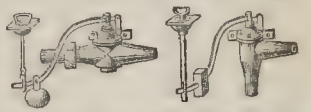
Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

egistered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.



GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1853.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

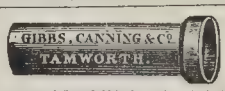
This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 12s. 6d. each.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS,



manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post.

PRICE for Closet and Apparatus COMPLETE FROM 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 29, Old Fish-street, near St. Paul's, London.

CROWN GLASS, 18 TABLES, 32s. PER CRATE.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers), White Fire Clay, Facing Bricks, &c., &c. Agents.—CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c.; Slates of the best quality, wholesale and retail. Country builders and others supplied with all information, on application to E. and W. STURGE, Bridge-wharf, City-road.

N.B.—The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made.

January, 1853.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

SALES BY AUCTION.

WESTBOURNE-TERRACE NORTH.—To BUILDERS and OTHERS.—Seven unfinished Houses.

MESSRS. LOCKWOOD are directed to SELL by AUCTION, at the LORD HILL, HARROW-ROAD, on WEDNESDAY, the 26th of SEPTEMBER, at TWO o'clock punctually, SEVEN UNFINISHED HOUSES, situate and being Nos. 18, 20, 22, and 24, Westbourne-terrace North, and Nos. 2, 4, and 6, Upper Terrace, Chelsea-road, adjoining; all brick-built, and substantially erected; possessing most eligible, in close proximity to Westbourne-terrace, and the fashionable locality surrounding The Square. The houses are estimated to realise 80l. per annum each, and the others 60l. per annum. They are held for long terms, at low ground-rents.—May be viewed and particulars had; and a ground-plan of the four on the left may be seen at Messrs. Underwood and Cowan, Solicitors, 14, Holles-street, Cavendish-square; and at the Offices of the Auctioneers, No. 1, Barnard-place, Hyde-park, or 44, Upper Baker-street. Part of the purchase-money may remain if required.

CHELSEA.—TO BUILDERS, COACH PROPRIETORS, AND CAPITALISTS.

MR. T. W. WOOD will SELL by AUCTION, on MONDAY, SEPTEMBER 17th, 1855, at TWELVE o'clock precisely, at the MART, near the Bank of England, by order of the Mortgagee, with power of sale in Three Lots, the following very desirable long LEASEHOLD DWELLING-HOUSES and BUSINESS PREMISES:—

Lot 1.—All that brick-built six-roomed Messuage or Dwelling-house, situate No. 42, Radnor-street, in the parish of Saint Luke, Chelsea, in the occupation of Mr. George Lilywhite, at the low rent of 36l. per annum, subject to a ground-rent of 6l. per annum; unexpired term, about eighty-six years.

Lot 2.—All that brick-built ten-roomed Messuage or Dwelling-house situate No. 41 Radnor-street aforesaid, together with a workshop and five pieces of ground in the rear. This lot is in hand. This property is most eligible for a coach, bus, cab, or van proprietor. Estimated rental, under and beyond the rent apportioned ground-rent of 8l. per annum; unexpired term, eighty-six years. A right of way reserved to the owner and occupier of Lot 3, to pass through or under the gateway, as will be shown in the plan to be produced at the time of the sale.

Lot 3, comprises all that brick-built extensive Builders' Workshop, with Store and Painters' and Plumbers' Shop under the same; a Builder's Office, and Stabling for four horses, situate in the rear of Lot 2, with a carriage road in Radnor-street. This lot is in hand. Estimated rental, 30l. per annum, subject to a ground-rent of 9l. per annum; unexpired term, eighty-six years. The entrance or right of way to this lot will be shown in the plan to be produced at the time of sale.

The fixtures, consisting of stoves, dressers, racks, and mangers, &c. will be included in the purchase of each lot. There is a very substantial brick boundary wall to this estate.—May be viewed on application to Mr. W. T. SEAL, 103, King's-road, Chelsea; and printed particulars and conditions of sale, 7 days had seven days prior to the sale, at the Offices of Mr. CHARLES EDMUNDSON, Solicitor, 32, Wall-rock, London, where a plan of the estate may be seen; of Mr. W. T. SEAL, as above; at the Place of Sale, at Mr. ETHERINGTON'S Offices, Chatham; and of the Auctioneer, Chatham.

TWICKENHAM.—To Builders and Persons wishing to build for their own occupation or as an investment.—Valuable Land, with extensive frontage, and Two Gross Rents, amounting to 70l. per annum.—By Mr. MASON, at GARRAWAYS, on TUESDAY, SEPTEMBER 25th.

FIFTY PLOTS of FREEHOLD BUILDING GROUND, delightfully situate, near the new church, Twickenham, a short distance from Pope's Villa, and only a half a mile from the Railway Station, and a half a mile from the Thames; two and a half acres are opposite Wellesley House, nearly adjoining Sir Wm. Clay's Park; two and a half acres are between the upper and lower roads; gravelly soil and good water; eligible for villa residences, with a railroad station half a mile distant. Also a valuable Ground Rent of 10l. issuing from two houses, already built on part of the estate, annual value, 70l.; and another ground rent of 8l. from a house with 180 feet frontage, let to Mr. Legge, who is to erect eight villas, worth 200l. a year.—May be viewed on application to Mr. CHANDLER, at the Prince Albert. Particulars had of the Auctioneer, Norton-folgate.

MITCHAM.—Freehold Land, with three frontages, and old Houses, offering a desirable opportunity for a Building speculation.—By Mr. MASON, at GARRAWAYS, on TUESDAY, SEPTEMBER 25, in one lot.

TWO ACRES of BUILDING-GROUND, facing Mitcham Church, frontage 210 feet, depth 400 feet; frontage on the road leading to the Railway Station, 360 feet, and in rear, on the footpath leading into the Morden-road, 220 feet; with Five roomy Houses, large barn, &c.—Particulars of Mr. WADE, House Agency Office, Mitcham; of the Auctioneer, Norton-folgate, and 8, Union-court, Broad-street; and of CHARLES BLAKE, Esq. Solicitor, 45, Fleet street.

COWLEY, MIDDLESEX.—About a quarter of a mile from the Uxbridge Station on the Branch Line of the Great-Western Railway.

MR. STRANSOM will SELL by AUCTION, at the CHEQUERS INN, Uxbridge, on THURSDAY, SEPTEMBER 20, at TWO o'clock, valuable FREEHOLD and TITHE-FREE BUILDING LAND, of about Four Acres, in an exceedingly healthy situation, in the parish of Cowley, Middlesex, and close to the town of Uxbridge, commanding extensive views, and in the immediate neighbourhood of the much-admired river Colne, in which the purchaser of each lot will have an extensive right of fishing. The land is eligibly adapted both for building purposes and for brick-making, as it contains an earth of the finest quality, and of great depth. The above presents an opportunity rarely to be met with in this neighbourhood, as a greater portion will be submitted for sale in one lot, for if an acceptable offer be not made, it will be put up to auction in various lots. May be viewed, and particulars, with conditions of sale and plans annexed, obtained of Messrs. WOODMANSEY and SONS, Solicitors, Uxbridge; of T. F. JENNINGS, Esq. Solicitor, Hillingdon-end, Uxbridge; and of Mr. STRANSOM, Auctioneer, &c. Uxbridge, Middlesex.

FREEHOLD BUILDING LAND, conveniences free, land-tax redeemed, at NEWMARKET, Essex.

MR. JOHN COLLINGS will SELL by AUCTION, on MONDAY, 24th SEPTEMBER, at FIVE, at the CASTLE INN, near the property, FORTY-FIVE PLOTS of valuable FREEHOLD BUILDING LAND, situate in CHANDOS and HENNIKER ROADS, CHOBHAM'S ESTATE, Leyton Road, within five minutes' walk of the Stratford Railway Station. Particulars and a plan may be had of H. D. DEARDS, Esq. Solicitor, 27, Vincent-square, Westminster; at the Castle Inn and King's Head Inn, West Ham; and of the Auctioneer, Angel-place, Stratford; and of Mr. COLLINGS, Estate Agent, Wordsworth place, Kingston.

KING STREET, SOUTHWARK.—TO BUILDERS, CARPENTERS, CABINET-MAKERS, AND OTHERS.

MR. ROGERS will SELL by AUCTION, by order of the proprietor, on the PREMISES, opposite the Britannia, Nelson-street, as above, on THURSDAY, SEPTEMBER 20th, 20th, 25th, and TWELVE for ONE o'clock, nearly 2,000 superficial feet of PLANKS, DEALS, and BATTENS, cut into various lengths and sizes; 150 squares of prepared deal and batten floor-boards, and a quantity of dry pine plank and scantling.—May be viewed the day preceding, and morning of sale. Catalogues had on the Premises, and of the Auctioneer, Kent Fire and Life Office, Lewisham, Kent.

TO BUILDERS, MASONS, &c.—Three hundred MARBLE CHIMNEY-PIECES, executed in great variety of designs, and manufactured in a superior manner, WILL BE SOLD by PUBLIC AUCTION on the following days:—WEDNESDAY, 3rd of OCTOBER, WEDNESDAY, 17th of OCTOBER; WEDNESDAY, 31st of OCTOBER.—Sale to commence precisely at THREE o'clock, and on view the day of sale only. The first and second portions will consist of the smaller class Chimney-pieces. The Third Days' Sale will consist of the larger class Chimney-pieces, suitable for Mansions, Public Buildings, and Clubhouses.

Westminster Marble Company,
Earl-street, Holywell-street, Millbank.

SALES BY AUCTION.

COMPETITIONS.

SALFORD CEMETERY.—The Burial Board Committee of the Corporation of Salford, offer the following premiums, viz.:—A PREMIUM of THIRTY GUINEAS for the best SET of DESIGNS for an ENTRANCE LODGE, to contain dwelling for the cemetery keeper, an office, entrance gates, and two chapels, with the necessary accommodations. The designs must be accompanied with a specification, sufficient to enable a competent party to estimate the cost. The committee will have estimates prepared, and the premium will not be awarded for any set of designs, that cannot be executed for a sum not exceeding £2,500. The committee would prefer the buildings executed in ornamental stone. The party whose design is approved, will, if satisfactory, be employed to carry out the works on such terms as may be agreed upon. Also a PREMIUM of TEN GUINEAS for the best DESIGN for LAYING OUT, PLANTING, ORNAMENTING, and ENCLOSING the GROUND.—Plans of the site, and full particulars, may be obtained, on application to the Town Clerk, Town-hall, Salford, and designs must be sent to his office, with a motto, accompanied by a sealed letter, not later than twelve o'clock on OCTOBER.

Town-hall, Salford, September 18, 1855.

TO ARCHITECTS AND OTHERS.

THE BURIAL-BOARD for the Parish of ST. JOHN the BAPTIST, MARGATE, Kent, is desirous of receiving PLANS, DESIGNS, ELEVATIONS, and SPECIFICATIONS, with ESTIMATES, for Laying out a New Burial ground, Enclosing with a Brick Wall Four of or the whole of the Eight Acres of Land secured by the Board, for Building Two Chapels and a Lodge, with Entrance-gate. The buildings are not required to be of an expensive character. The parish contains at present about 9,000 Inhabitants. A PREMIUM of £5 is to be given to the Architect whose plans, designs, elevations, and specifications are approved by the Board. The Architect must be prepared, if required by the Board, to make the superintend the carrying out of the intended works, if called upon to do so, upon receiving the usual fee for the same. A sealed letter, containing the name and address of the party who should accompany the specifications, with a motto, which will be opened after the selection is made; and the plans not approved will be returned. The Board does not pledge itself to accept any plan. The drawings are to be sent, free of carriage, to me, at the Office of the Burial Board, on or before the 1st day of NOVEMBER next.—A tracing of the ground, with further particulars, may be obtained upon application as above.

JOHN POUSSETT, Clerk to the Board.

Town-hall, Margate, Sept. 18, 1855.

TYNEMOUTH CEMETERY.—The Burial Board for the Parish of Tynemouth, offer the following PREMIUMS, viz.:—For the best set of DESIGNS for an EPISCOPAL CHAPEL, a DISSENTERS' CHAPEL, LODGE, OFFICE, and necessary accommodations; Gardener's Cottage, and Entrance-gates; accompanied by estimates. The cost to exceed £2,000 for each. Thirty Guineas. The architect whose design shall be approved will be required to furnish all detailed specifications and working drawings necessary for the construction of the works, and to find a contractor willing to perform the work for the sum named in the report and estimate accompanying the plans. In the case of the designs be adopted, and the specifications and working drawings not required, only one half of the above premium will be given. For the best plan and estimate for LAYING OUT, PLANTING, and ORNAMENTING the ground, 23 acres in extent, keeping in view the preservation of the natural grass on such portions of the land as may not be required for purposes of interment. Ten Guineas. A lithographed plan of the site, with the levels marked thereon, may be obtained, on payment of 5s. at the Town Surveyor's Office, Norfolk-street; and further information obtained there, or at the Town-clerk's Office, Howard-street, Tynemouth. The plans, designs, and estimates, to be sent to the Town clerk's Office on or before THURSDAY, the 27th instant.

THOS. C. LIETCH, Clerk.

Borough of Tynemouth, September 5, 1855.

CONTRACTS.

TO BUILDERS AND IRONMONGERS.

THE BURIAL BOARD for the PARISH of GREENWICH, Kent, are prepared to receive TENDERS for the ERECTION of a DWARF PLINTH WALL and IRON PALISADING, to the east and west boundaries of the NEW CEMETERY for GREENWICH, at Kidbrook, near Blackheath, and for Entrance Carriage, and Foot Gates, at the southeast angle, facing Well Hall-lane.—The drawings and specification may be seen at the Offices of the Architect, Mr. J. HUSWELL, Montague-close, Southwark. Tenders to be sent to the Offices of Mr. T. JAMES, No. 24, Burr-street, Broadway, London-bridge, on MONDAY, the 1st of OCTOBER, 1855, at FIVE o'clock. The Board do not bind themselves to accept the lowest, nor any of the Tenders sent in.

E. W. JAMES, Clerk to the Board.

Greenwich, September 13, 1855.

TO BUILDERS.

THE LEAMINGTON NATIONAL SCHOOLS.—Parties desirous of the opportunity of TENDERING for the ERECTION of the above SCHOOLS, from the designs of Messrs. Lanchaster and Wrightington, Architects, 37, Great James-street, Bedford-row, London, are requested to send in their names to W. WATSON, Esq. Leamington, on or before the 8th inst. in order that the requisite number of quantities may be provided. A copy of the quantities will be forwarded on the receipt of 10s. The Trustees will not bind themselves to accept the lowest tender.

TO CONTRACTORS AND BUILDERS.

THE Directors of the London, Brighton, and South Coast Railway Company are prepared to receive TENDERS for the ERECTION of SEVEN BUILDINGS at the Balcombe Area Depôt in the Hamsden, Sussex, comprising a Goods Station, Engine and Tender Houses, Granaries, Carpenter's Shop, &c. The drawings and specification may be seen at the Engineer's Office, London-bridge Terminus, on and after MONDAY, the 17th instant; and Tenders must be sent in to the undersigned before TWELVE o'clock on the morning of THURSDAY, the 27th instant.

FREDERICK SLIGHT, Secretary.

London Terminus, Sept. 13, 1855.

CONTRACTS.

Royal Engineer's Office, Portsmouth, 10th Sept. 1855.

NOTICE is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before the 1st of OCTOBER, 1855, before TEN o'clock a.m. from such persons as may be willing to enter into a CONTRACT with the Ordnance for ALTERATIONS to the GLACIS at Southsea Castle, near Portsmouth, County of Hants, agreeably to the plans and specifications to be seen at the Royal Engineer's Office, Portsmouth, on application to Mr. HAWKEN, Clerk of Works, any day (excepting Saturdays) between the hours of TEN and FOUR, until TUESDAY, the 2nd OCTOBER, 1855, and where forms of Tender may be obtained.

The Board do not reserve to themselves the right of rejecting all or any of the Tenders.

NOTICE to GAS CONTRACTORS and BUILDERS.—ORDNANCE MEMORANDUM. Office of Inspecting Royal Engineer in Ireland, Dublin, 6th September, 1855.—ERECTION of GAS WORKS and all APPARATUS appertaining thereto, with Street Mains, Pipes, External and Internal Fittings, and supply of GAS, for the Temporary Barracks on the Curragh of Kildare, in the Dublin district.—The Inspecting Royal Engineer in Ireland will receive TENDERS for the services, at his office, in the Castle, Dublin, on any day between 10 o'clock and 4 o'clock.

Form 1.—For the ERECTION of a GAS MANUFACTORY, with all necessary apparatus, site of works, pipes, public lamps, &c. &c. and for supplying and fitting all internal fixtures, burners, &c. &c. and for the supply of the Gas thereof, the contractor must notify in his Tender the sum at which he proposes to undertake the whole complete, as per plans and specifications, the whole to remain the property of the contractor; but the contractor to engage to supply all gas required at a fixed price to be named in the Tender, per 1,000 cubic feet, and the Government to have the option at any time to terminate the contract, and purchase the whole, at a price which must be named in the Tender.

Form 2.—For the ERECTION of a GAS MANUFACTORY, with all necessary apparatus, street mains, pipes, and public lamps, the same to remain the property of the contractor, and for supplying and fitting all internal fixtures, burners, &c. the same to be the property of the Government, the contractor engaging to supply all gas required at a fixed price, to be named in the Tender, which sale to state sum for meeting.

N.B. Intending Tenderers are requested to consider for the above services and weights the room, plans and specifications, where all to be carried at the same time as the Tenders which may be received in reply to the former notice. Government reserve to themselves the right to reject any or all the Tenders. Persons desirous of Tendering for the above work will receive every information at the Office of the Inspecting Royal Engineer, Ordnance Office, Linen Castle, Dublin; and at the Commanding Royal Engineer's Offices at Manchester and Glasgow, where they may see the drawings, and obtain specifications, with the terms of contract. The period to be stated in the offer of Tender with which contractors engage to complete the work, subject to terms of contract. All Letters containing proposals or Tenders in connection with the above to be addressed to "The Commanding Royal Engineer in Ireland, Lower Castle yard, Dublin," and to be received on or before the 27th day of SEPTEMBER, 1855; and to be endorsed on the outside, "Tender for Gas Works at the Curragh of Kildare."

BURSLEM LOCAL BOARD of HEALTH. CONTRACT No. 1.—The Burslem Local Board of Health are prepared to receive TENDERS for the supply of a quantity of certain GLAZED EARTHENWARE PIPES and other ARTICLES, as mentioned in the Schedule of the Specification. Copies of the drawings and specifications and forms of Tender and Quantities, may be obtained at the Public Offices, Marsland-road, Burslem; and at the Office of the Engineer, Mr. LEE, 7, Duke-street, Westminster, on and after SATURDAY, the 8th day of SEPTEMBER inst. Tenders must be sent in to me on or before TUESDAY, the 2nd day of OCTOBER, 1855.

By order, JOSEPH LOWNDES, Clerk to the Board.

Burslem, 8th September, 1855.

BURSLEM LOCAL BOARD of HEALTH. CONTRACT No. 2.—The Burslem Local Board of Health are prepared to receive TENDERS for the supply of the SADDLE BACK, BRICK SEWER PIPES and other ARTICLES, as mentioned in the Schedule of the Specification. Copies of the drawings and specification may be seen, and forms of Tender and Quantities may be obtained at the Public Offices, Marsland-road, Burslem; and at the Office of the Engineer, Mr. LEE, 7, Duke-street, Westminster, on and after SATURDAY, the 8th day of SEPTEMBER inst. Tenders must be sent in to me on or before TUESDAY, the 2nd day of OCTOBER, 1855.

By order, JOSEPH LOWNDES, Clerk to the Board.

Burslem, 8th September, 1855.

EAST LANCASHIRE RAILWAY.—TO CONTRACTORS and BUILDERS.—The Directors are prepared to receive TENDERS for the ERECTION of the following WORKSHOPS for Bolton, viz.:—Engine Erecting Shop, Machine Shop, Offices, Smiths' Shop, Spring Shop, Boiler Shop, Foundry, Engine Lamp, and Sand Houses, and Stores, at the Bolton Office, Bury Station, and Sidings, addressed to Mr. Underwood, Manchester. Tenders to be delivered at the Company's Office, Manchester, on or before the 1st of OCTOBER next. Plans, specifications, and forms of Tender may be obtained at the Offices, Bury, Lancashire, of JAMES SMITHELLS, Secretary.

Bury, Lancashire, Sept. 14, 1855.

[For remainder of Contracts see next page.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS. To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Central Office, No. 1, Great Queen-street, Lincoln's-inn-fields, on TUESDAY, the 23rd day of SEPTEMBER inst., at ONE o'clock precisely, to receive sealed TENDERS from parties ready to enter into Contract for EXECUTING, DOING, CONSTRUCTING, and COMPLETELY FINISHING the following WORKS, viz.:—

1. Four Feet in length, of three culverts of brick sewer, with other works in connection therewith, in Great Pulteney-street, Duke-street, Prince-street, Marshall-street, St. Andrew's-street, Great Queen-street, Kilburn, and other streets and places in the county of Middlesex (in red colour).

2. Four Feet in length, of the sub-sts of brick sewers with other works in connection therewith, in Marshall-street, Broad-street, Carnaby-street, Church-street, and Brompton-road, in the county of Middlesex (in blue colour).

3. Four Feet in length, of three culverts of brick sewer, with other works in connection therewith, being on the Brompton-line and a point in a certain new road leading from Old Brompton-lane to Warwick-street, Chelsea (in green colour).

4. Four Feet in length, of three culverts of brick sewer, with other works in connection therewith, in Upper Ebury-street, Duke-street, and Lupus-street, Chelsea, in the county of Middlesex (in yellow colour).

5. Four Feet in length, of three culverts of brick sewer, with other works in connection therewith, in the Kingsland-road, Colvestreet, in the county aforesaid (in orange colour).

The Works are to be completed for the twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, can be inspected at the Office of the Commissioners, No. 1, Great Queen-street, Lincoln's-inn-fields, between the hours of NINE and FOUR o'clock, on and after the 21st instant, at which Office the Engineer's estimate of the amount of the lowest Tender, and the party whose Tender shall be considered the most eligible, may be known.

The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the performance of the Contract.

No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Great Queen-street, Soho-square,
Lincoln's-inn-fields, 20th of September, 1855.

TEMPERANCE PERMANENT LAND and BUILDING SOCIETY. To BUILDING CONTRACTORS.—The Directors are prepared to receive TENDERS for CONSTRUCTING the ROADS on the STRATFORD ESTATE. The Drawings and specifications may be seen on and after THURSDAY, the 27th inst., at the Office of the Surveyor, Mr. WILLIAM LILLISON, 13, Stamp's-place, Limehouse, where tenders are to be delivered at or before SIX o'clock, on TUESDAY, the 2nd of OCTOBER next, at the Office of the Society, addressed to the Secretary, and endorsed, "Tenders for Roads, Stratford Estate." The Executive Committee do not bind themselves to accept the lowest or any Tender.

H. J. PHILLIPS, Secretary.

34, Moorgate-street, London.

The Belvedere estate will shortly be allotted.

TENDERS are required for the ERECTION of FIVE PAIRS of SEMI-DETACHED COTTAGES at Willesden, Middlesex, and may be seen at the Office of Mr. WILLIAM L. WILLIAMS, Architect, No. 7, Adelaide-street, between the hours of TEN and FIVE, on and after THURSDAY next. Mr. W. does not bind himself to accept the lowest or either of the Tenders.

TO BUILDERS.

ROMFORD UNION.—BUILDERS only to submit CONTRACT for the ERECTION of the ADDITIONAL SCHOOLS, the laying out of the ground in front of the UNION HOUSE, and OTHER WORKS, are invited to inspect the plans and specification of the works at the Office of Messrs. EDWARDS, the Architects, 17, Hart-street, Bloomsbury; or at my Office at Romford, on and after FRIDAY, the 31st instant. The Tenders are to be delivered at the Board-room, Romford Union, at Romford, on or before MONDAY, the 1st of OCTOBER next, by FIVE o'clock in the afternoon. The Guardians will meet at the Board-room, Romford Union, on TUESDAY, the 2nd day of OCTOBER next, at TWELVE o'clock, to receive the Tenders, each of which must be accompanied with the name of two responsible persons, who will enter into and execute a Bond for the due performance of the Contract, but the Guardians do not bind themselves to accept the lowest Tender.

W. H. CLIFTON,
Romford, September 18, 1855. Clerk to the Guardians.

TO BUILDERS.

PARTIES desirous of TENDERING for the ERECTION of a CONGREGATIONAL CHURCH, to be built at Folkestone, Kent, may see the drawings and specifications, and obtain particulars, at the Office of M. J. MESSENGER, Architect, Dover-road, Folkestone. TENDERS will be received from Builders to be sent in to the Office of the Architect, addressed to him, at TWELVE o'clock, on THURSDAY, the 11th of OCTOBER. The Architect reserves to himself the power of rejecting the lowest or any other Tender. Earliest, Sept. 21, 1855.

TO BUILDERS.

PARTIES desirous of TENDERING for the ERECTION of a RESIDENCE, with Stabling, &c., to be built at Walmer, Kent, for Capt. Montresor, R.N., may see the drawings and specifications, and obtain further particulars at the Offices of Messrs. NIBLETT, Architects, Walmer, Kent. Tenders to be sent in to the Offices of the Architects, on or before TWELVE o'clock on THURSDAY, the 4th of OCTOBER. The Architects reserve to themselves the power of rejecting the lowest or any Tender.

Folkestone, Sept. 21, 1855.

PUMPING-ENGINE.—The Committee acting under the Hereford Improvement Act of 1854 are preparing to receive TENDERS for supplying a suitable Engine to undertake the CONSTRUCTION and ERECTION of a PUMPING-ENGINE for the Hereford Waterworks. A description of the engine required, with all the particulars, may be obtained on application to Mr. T. CURLEY, C.E. Tenders to be sent to, on or before TWELVE o'clock, p.m. on MONDAY, the 29th day of OCTOBER next, addressed to the Committee of the Hereford Improvement, and endorsed, "Tender for Pumping-Engine." The Committee do not pledge themselves to accept the lowest or any Tender.

By order of the Committee,
T. CURLEY, C.E.

Hereford Improvement Office, 19th September, 1855.

NOTICE to BUILDERS and OTHERS.—The Burial Board for the Parish of Great Coggeshall in the County of Essex intend entering into a CONTRACT for BUILDING a CHAPEL, ENTRANCE-GATES, and PIERS, PALISADE FENCING, IRON HURDLES, and other Works, under the Burial Act, and the Parish intend forming a Cemetery said. Plans and specifications of the works required to be done may be inspected at my Office, in Stonebridge-street, Great Coggeshall aforesaid, or at the Office of Mr. GEORGE COOTE, the Architect to the Burial Board, opposite the Bank, at Witham on Friday, from FRIDAY, the 21st day of SEPTEMBER inst. to WEDNESDAY, the 3rd day of OCTOBER next, inclusive. All persons willing to undertake the said works are requested to make proposal for that purpose by delivering sealed Tenders for the same addressed to me, and endorsed "Tender for Burial Works," such Tender to be delivered at my Office free of expense, on or before TWELVE o'clock at noon of SATURDAY, the 6th day of OCTOBER next. The Board will require security for the due performance of the contract, and do not pledge themselves to accept the lowest Tender.

By order,
RICHARD STEVENS, Clerk to the Burial Board.

Coggeshall, Sept. 17, 1855.

TO SEWER CONTRACTORS.

PERSONS desirous of submitting TENDERS for the BUILDING SEWERS, and PUTTING IN DRAIN PIPES on an estate at Tollington-park, may inspect the drawings and specification at the Office of Mr. CHARLES HAMBRIDGE, Architect, on and after WEDNESDAY next. Tenders to be delivered with OCTOBER, at TWELVE o'clock.—The proprietor does not bind himself to accept the lowest or any of the Tenders.

CONTRACTS.

THE CONSERVATIVE LAND SOCIETY.

Viscount Raneleh.
Right Hon. B. B. Cabbell, M.P.
Hon. Col. Lindsay, M.P.
J. C. Cobbold, esq., M.P.

TO ROAD CONTRACTORS.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS on the SECOND PORTION of the ROUND HILL PARK ESTATE, Brighton, Lost Sussex. The drawings and specification may be seen at the Offices of the Surveyor, Mr. GEORGE MORGAN, (Draughtsman of the drawings, Mr. Allington),

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

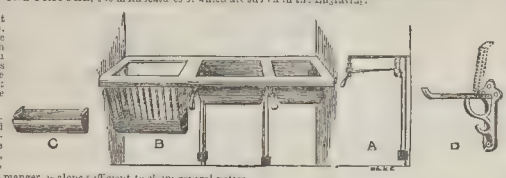
IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.



THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTION FOR STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street,

Have made important additions to their Illustration of PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, the principal features of which are shown in the Engraving.

A represents the Patent Halter guide and C the corn, the ball of which is taken to the back of the manger-works with freedom and ease up or down the guide-bar, and is useless to the occupation, as the feeder prevents the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, instead of leaving a shapeless iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned clear out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and never get out of order. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers: Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock

An extensive Assortment of Castings for Both Plain and Ornamental Work for Building, and other purposes

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

Estimates and Catalogues on application.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

THE LIVERPOOL AND MANCHESTER

PATENT GALVANIZED CORRUGATED IRON WORKS,

AND IRON ROOFING MANUFACTORY.

Head Offices: 13, JAMES-STREET (late the Coalbrookdale Company's Premises), LIVERPOOL,

Where all Letters are requested to be addressed.

FRANCIS MORTON AND CO.

Beg to inform ENGINEERS, CONTRACTORS, and the PUBLIC that they have increased their manufacture of Corrugated Iron by the purchase of the machinery and all the working dies of the late firm of Messrs. PORTER, BROTHERS, and STUART, of BIRMINGHAM.

Parties are deemed to use the PARTICULAR SIZES of Corrugations heretofore manufactured by that Firm can be still supplied with the same sizes from the same dies.

FRANCIS MORTON and CO. manufacture now a greater variety of Corrugated Iron either galvanized or black, than any other house in the trade, comprising every intermediate size, from 2 inches up to 6 inches each corrugation, in all lengths up to about 11 feet;

also the angular and segment iron.

STRONG PLATES CORRUGATED EXPRESSLY for FIRE-PROOF FLOORS, ROADWAYS, BRIDGES, PARAPETS, also for RAILROAD KINGS or ROOFING, RAILWAY WAGONS, &c.

All kinds of GALVANIZED SHEET IRON ditto, expressly prepared for Trimmers use; General Ironmongery and Iron Goods in stock or galvanized to order.

The Trade supplied with Galvanized Water-buckets, Wire, Poultry, and other Netting, of every size; Best and Charcoal Wire, of all gauges; Wove Wire for Venetian Blinds, &c.; Galvanized Water Pipes, Eaves Gutters plain and moulded, Down Pipes, Tubing, &c., cheaper and more durable than lead; Water Cisterns, Wire Ropes, Window-sash Cords, Signal Cords and Pulleys; Copper Rope Fan me Wire and Telegraph Wire, in Lengths.

Co-inventors of the PATENT WEDGE STRAND FENCING, which is supplied and erected complete, at per yard.

Wrought-iron FIELD GATES, CATTLE and SHEEP HURDLES, and DEER FENCING of every description.

The PATENT ASPHALTED ROOFING FELT, at 1l per square foot. Dry hair Felt for Deadening Sound, for Boilers and Steam Pipes, various prices and qualities, at greatly reduced rates.

Contractors for the Sale of Wrought and Cast-iron FENCING, PALISADES, ENTRANCE-GATES, and VERANDAHS.

Ships fitted with Wire Rope Rigging, Galvanized Chains, Anchors, &c

THE TRADE SUPPLIED ON LIBERAL TERMS.

Head Offices: 13, JAMES-STREET (late Coalbrookdale Company's Premises), LIVERPOOL;

Also 18, ST. MARY'S-GATE, MANCHESTER.

N.B. All kinds of Iron and Ironwork Galvanized, and Sheet-iron Corrugated at very moderate prices.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

LOSH, WILSON, and BELL,

NEWCASTLE-ON-TYNE.

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and

STEWART'S PATENT CAST-IRON GAS and WATER PIPES.

Office, No. 7, Rise-lane, London.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 300 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

No. 1081. Class 6, Section 16, BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

212" MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporising) with all the improvements, under their Quadruple patents of 1850-51-54 and 1855 including their Gunpowder Proof Solid Lock and Door (without which no safe is secure)

THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT

MILNER'S PHŒNIX SAFE WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47A, Moorgate-street, City.—Circulars free by post.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE:—

No.	3	4	5	6
	4s.	5s.	6s. 3d.	7s. 6d. per gross.

At JOHN YOUNG'S, Birmingham and Wolverhampton, Agent, Enator, and General Ironmonger, 13, Beaufort-street, Manchester-square, running out of Baker-street, Portman-square. Every other article equally reasonable.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, free, about 1856. Hare Holborn.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE, both for the use of the public and private families, as the most simple in its construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is now manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; which may also be viewed in operation with Hobbs's or Forward's fire-lighter. DEANE, DRAY, and CO. (adjoining to the Monument), London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE, BACH HOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful means of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and useless fuel are thus effectually prevented; whilst a clear, cheerful fire is produced, and many cases of broiled beef, veal, mutton, lamb, tongue, &c.; roasting in one department a baron of beef weighing 330 lbs. in nine hours, fifty-three minutes, presented by J. Bannister, esq. To each gentleman, to the directors, for the benefit given by the former inventors. The whole system in full operation for ten months, and never known to get out of order as when first finished. "They have not cost one shilling for repairs."

I am, Gentlemen, yours respectfully,

EDWARD HORNE.

Messrs. Deane, Dray, and Co.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of their friends to their improved APPARATUS. At Messrs. Weeks's establishment, in operation with one of the newest description, may be seen the heating building, measuring 1,000 feet in length, at the small expense of 4s. per day for fuel and labour of both. This achievement in heating by hot water is superior to steel.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation on Steam engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, as Sugar Refiners, Potters, Colourers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst them as one of the inventions of the day for abating the Smoke Nuisance, and in many instances with a diminished consumption of Fuel.

The furnaces, of various constructions, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS BROTHERS, Nine Elms, London.

Address, THE SMOKE BURNING COMPANY, Nine Elms, London.

ESTABLISHED 1817.

WILLIAM HARMER'S Smiths' Works, Stove and Range Manufactory, and Ironmongery, Metal, and Zinc Warehouses, 14, Ranelagh-street, and 4, New Belgrave-street, Westminster. Contractors, Builders, &c. supplied with General Ironmongery at the Lowest Cash Prices.

Cottage Ranges, with oven, boiler, &c. complete, 22s. each.

Self-acting ditto, with ditto, from 23s.

Self-acting Oven and Boiler Ranges, with wrought fittings, &c. complete, from 5 guineas each.

Register Stoves, from 1 per inch.

Elliptic ditto, with double backs, from 1s per inch.

Cast-iron Rain-pipes	2½	3 inch.
	11d.	1s. 3d. 1s. 4d. per yard.
4-inch Eaves Gutters, 5d per yard		
O G Gutters	2½	4 5½ inch.
	1s.	1s. 1d. 1s. 3d. 1s. 6d. per yard.
Best Cut Clasp and Rose	1½	2 2½ 3 inch and larger.
	10s.	15s. 17s. 6d. 1s.

1 inch Best Cut Lath, 15s. 6d. per cwt.

Sheet Floor Brads 15s. 6d. per cwt.

Hoop Floor Brads 13s. per cwt.

Sash Weights, 7s. 6d. per cwt.; 2 Inch Rim Locks, 3s. 6d. per doz.; 6-inch Sink Traps, 3s. per doz.; strong Coil Plates, with hooks, 2s. per doz. Sheet Zinc, Perforated Zinc and Tubing. Estimates given for Iron Railing, Gates, Balconies, and Ironwork of every description.

AUSTIN'S IMPERIAL

PATENT SASH and BLIND LINE,

can be obtained of all

ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

Established 1770.

IRONMONGERY.

PFEIL AND STEDALL.

THE LARGEST STOCK AT

THE LOWEST PRICE,

BUILDINGS HEATED by HOT WATER.
G. B. COOPER, IRONWORKS, 124, DRURY-LANE.
Hot Plate Cooking Ranges, Apparatus, Baths &c.
Orders carefully and effectively executed.

TO ARCHITECTS AND BUILDERS.
PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Each power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any public building or business established most in the kingdom. Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

REDMUND'S PATENT HINGE MANUFACTORY, WELLINGTON FOUNDRY, Charles-street, City-road, near the Canal-bridge. Established thirty years.—P. REDMUND, widow of the late J. Gedge, sole manufacturer of REDMUND'S and GOLLOP'S PATENT, rising and not rising spring, swing, double acting, gate, and other Hinges, Floor Centres, &c. &c. Orders for Hinges only, addressed to Mr. J. WALBY, sole Agent, at the Wrexhouse, 56, Greek street, Soho; or at the Foundry, will be promptly attended to.—Every description of Small, Soft, and Malleable Iron Castings.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES C. LLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c., doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron work, for building and other purposes. Engines, machinery, patent axle trees, sugar-mills, &c.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Cane Tube for Picture Rods, Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.
RICHARD EVERED'S Brass and Bell Foundry and Metal Warehouses, Nos 10 11, and 12 Charles-street, Long-acre, London

LIGHTING of CHURCHES.—F. SKIDMORE and SON, Coventry.
The unsightly fittings for gas and candles which so frequently disfigure our churches have induced F. & Skidmore to devote much time to the production of such as may harmonize with the characteristics of the buildings. The designs are founded on personal study (the remains of ancient metal work on the continent and in England.
F. S and Son would refer to their works for lighting Chester Cathedral, S. Botolphs, Boston; S. Mary's, Newark; S. Michael's, Coventry; S. John's, Ladywood; S. Philip's, Birmingham, Rowden, near Manchester, &c.; as also to the following testimonials:
"We went over the manufactory of Messrs. Skidmore, in Coventry, and were much pleased by the artistical spirit which animates them. Many list of churches and other large buildings lurked by them show their endeavours are duly appreciated."—*Builder.*
"These rising artists show considerable taste; we shall watch their progress with great interest."—*Ecclesiologist.*
"Mr. Skidmore must be considered an artist of great attainment and singular promise."—*Morning Chronicle.*
Where limited funds render economy necessary, F. A. S. has prepared designs of a simple and inexpensive character. They have gas standards, &c. finished ready for immediate use.
Sketches, with estimates, sent free by post.

REDUCED PRICES.—EDWARD SIMMS (late William Cleaver), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ½ inch to 1½ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Bills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory Wilton-road, Pimlico Basin.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the following greatly reduced prices:—

Ditto ditto, in planks and boards	"	0s. 6d. "
Spanish ditto	"	0s. 8½ "

Prepared Flooring, Veneers, &c. at equally low prices. A list forwarded on application.
Borough-road, Southwark, and Elm street, Gray's-inn-lane

SEASONED FLOORING.—GEO. NOKES and CO. (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—

½ inch White, 10s. 6d. per square.		½ inch Yellow, 12s. per square.	
1 ditto	15s.	1 ditto	16s. 6d. "
1½ ditto	18s.	1½ ditto	20s. "

Laths, 3s. per bundle.
Also Timber, Deals, Planks, &c. Mouldings by machinery in every great variety.
ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth. The Proprietor of these works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

PADDINGTON TIMBER-YARD.—SAWING, PLANING, and MOULDINGS.—3, Ironsave Wharf, Praed-street, Paddington, and 2, St. John's-wood-terrace, St. John's-wood.—GEORGE WILLIAM TRY begs to draw attention to his large stock of SEASONED and PREPARED WOOD GOODS, at the lowest current prices. Liberal allowance for cash, and facility for immediate despatch by rail or canal, which affords every advantage to country as well as town buyers. Illustrated and priced sheets of moulding patterns and general price lists of goods forwarded post free on application. Goods free to any part of town, including the various railway and canal stations.
N.B.—Sawing and planing for the trade.

STEPHENS'S STAINS for WOOD.
Testimonial to the value of:—
"Northgate, Colchester, February 5, 1855.
"Sir,—I have just finished a new church with your oak stain, and I consider it the best adapted for the purpose, being the nearest approach to the real wood of any I have ever used.
"I am, sir, your obedient servant,
"SAMUEL GRIMES, Builder.
"To Mr. Hy. Stephens, 51, Stamford-street, London."

ACORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and oak desks, slating battens, laths, Englishoak plank, and sash-sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

MOULDINGS by MACHINERY, to any Design, carefully packed and sent to all parts of the country. Address, E. SIMMS, Sawing, Planing, and Moulding Mills, King's-road, Chelsea, and Wilton-road, Pimlico.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is constantly receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are now wielded by the principal house firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of stones upon hand, consisting of Marble chimney-pieces, monuments, tanks, and every description of marble and stone work also manufactured by patent machinery. NEW WORKS, No 2, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 100 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready, to be had on application, or if called for, by enclosing six-pence-stamps. Please note the address 2, BRIDGE-TERRACE, HARROW ROAD, Paddington, near the Great Western Railway Bridge.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 44, James-street, Oxford-street, also Manufacturer of Improved Knotting and Decorative Varnishes.

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, to be fetched away and paid for at the time, at C. LEFTWICH'S Lead, Glass, and Colour Warehouse, 7, Munster-street, Regent's-park.—A large quantity of PAPER-HANGINGS, CHEAP.
2s. per cwt. given for old lead.

HAWKINS'S PATENT BRUSH COMPANY TO MERCHANTS, ARTISTS, and OTHERS.—FRANCIS FORD begs to state that he has arranged with the Patentees and Manufacturers of Hawkins's Patent and all Brushes, for the SOLE AGENCY of London and its vicinity. All communications addressed to him as under shall have his prompt attention, where price lists, patterns, and all particulars of the same can be obtained on application, or sent by post. Mr. FRANCIS FORD, 1, Laurence Pountney-hill, Cannon-street, London.—Sole Agent for London and its vicinity.

J. LEACH, BREWERY MILLWRIGHT and ENGINEER, 36, Critchell-place, New North-road, Hoxton, eighteen years' experience in London and country brewhouses. Malt-rolls, mashing machines, &c. &c. Brewery machinery on the most approved principles, and reasonable terms. Alterations and repairs, and workmen sent to any part of the kingdom.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

Every other description of Blinds equally low, warranted of the best manufacture. Discount to Builders and the Trade. Fixed complete.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.

CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe joints, hose and tubing; also for gas holders, acid pumps, alkali cisterns, &c. &c. Articles moulded or otherwise, made to any size or figure.—Address, 37 Cannon-street West, London; and Cambridge street, Manchester.

DURABILITY of GUTTA PERCHA

TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., TENTNOR, ISLE OF WIGHT. —Second Testimonial. "March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Dining-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

HOSE PIPING.—WAITHMAN'S

PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, and will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.									
½	¾	1	1¼	1½	1¾	2	2¼	2½	2¾	3 in.
9d.	11d.	1s.	1s.	3d.	1s.	9d.	1s.	3d.	2s.	3d. 2s. 9d.

Super-extra stout quality.

2	2¼	2½	2¾	3 inches.
2s.	2s. 3d.	2s. 6d.	2s. 9d.	3s. per yard.

No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

1	1¼	1½	2	2½ inches.
9d.	10d.	11d.	1s.	1s. 3d. 1s. 6d. per yard.

The hose is Burnettized at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

PURE WATER, for manufacturing purposes,

may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 127, Union-street, Borough; and of all respectable ironmongers, builders, &c.

THE EAST INDIA COAL COMPANY, "LIMITED."

Provisional registered under the Limited Liability Act of 1855

Capital 100,000 in 10,000 Shares of £10 each.

A Deposit of Five Shillings per Share on Application

The first call of £2 per share to be made one month after the Deed of Company is ready for signature, of which due notice will be given, and the remaining calls to be made from time to time as the money may be required

Provisional Directors.

Captain L. V. Vernon, R.E. M.P. Aramgton House, Wantage, Berks

Sir H. T. Maddock, M.P. late Governor of Bengal, 180, South Audley street.

Gregor Dunbar, esq. Bengal Civil Service (late Chairman of the Oriental Bank), Upper, Clapham.

James Hume, esq. of Calcutta, Reform Club, Pall-mall.

George Smeed, esq. Gore Court, near Sittingbourne, Kent.

A. L. de Mandhare, esq. 20, Mark-lane.

William P. Hayman, esq. Rochester, Kent.

George Dorrell, esq. 1, Belgrave-place, Brunswick-square.

E. W. Morris, esq. Monument-yard, London-bridge.

Solicitors.

John Noble, esq. of the Firm of Messrs. Noble and Co. Broad-street Buildings.

H. C. Read, esq. of the Firm of Messrs. Mackay and Read, 9, New Broad-street.

Bankers.

Messrs. Glyn Mills, and Co.

Secretary.—Henry Haymen, esq.

Standing Counsel.

Charles Wordsworth, esq. 4, Paper-buildings, Temple

Solicitors.—Richard Hall, esq. 19, Essex-street, Strand

Brokers.—Patric Castell, esq. 4, Credit-court Old Broad-street.

Offices.—Provisional—Bedford House, Old Broad-street.

This Company is established with a view of working Coals in the Valley of the Damoodah, in Bengal, and of supplying the great and rapidly increasing demand in India for that article.

The peculiar nature of such an undertaking has been placed before and dwelt on by the fact that association of the Bengal Coal Company, which worked in the immediate neighbourhood, has for some years past paid its shareholders dividends varying from five to sixteen per cent. The East India Coal Company will have a ready choice of coal in the same formations, with the means of transporting its coal to market, by rail, in six hours—a benefit of vast importance, when it is remembered that until within these last few months the only mode of transit has been, of the most tedious, dangerous, and expensive character, combining land and water carriage—the former by bullock carts, and the latter on a torrent navigable for a very brief period of the year.

The collieries and lands secured by the Directors are extensive and valuable; they consist of five distinct mines, together with landed plant &c. and comprise an area of upwards of five hundred acres. The seams vary from 8 to 16 feet in thickness, and contain an inexhaustible supply of coal. Topographical Researches, the practical mines are immediately adjoining, and situated within three miles of the East India Railway Company's terminus at Raneegunge, and 20 miles by rail from Calcutta. They have been worked on a small scale for the last five years, supplying for about two years the Indian General Steam Navigation Company with all the coal for its steamers. Pits already sunk at depths varying from 40 to 60 feet. Samples taken from these mines have been submitted to competent examination, and pronounced, and to be of Welsh Steam Coal. The other three mines, Kenta, Rasgal, and Tasaora, although at greater distances from the main, are most favourable with reference to the superior quality of the coal, and to facility for conveying purposes. The Jemadoba mine, which, these mines have been purchased, are highly favourable to shareholders. Not only is the price extremely moderate, with reference to previous sales of similar property in India, but the purchase money is entitled to receive the whole amount in shares of the Company.

A chart of the mines, samples of the coal, and a full report from competent parties in India as to the workings and extent of the property, are in possession of the Directors, and may be inspected at their office. For the information of those who desire to form themselves of this privilege, a few brief remarks are here submitted:—Owing to the cheapness of labour in India, a ton of coal can be raised and deposited at the pit's mouth for a sum equal to 1s. 3d. The present charge for conveyance, by rail, to Calcutta, is 11s. 9d. per ton; the cost of coal, therefore, in Calcutta, will be 13s. 3d. per ton; or, adding 1s. 6d. for sundry charges, 14s. The price of coal in Calcutta has never been less, for many years, than 24s. per ton; and in profit consequently will be the difference, or 5s. per ton. The amount of coal raised will be less than 300 tons per diem, leaving a profit of 10l. per day, or in round numbers, 3,000l. per annum, after allowing for all contingencies. Supposing the whole amount of capital to be called for, still a handsome dividend may be expected, and regularly and speedily.

With the skill and means now available, a very superior quality of coal will be raised to any hitherto brought to market in India. The manufacture of Patent Fuel upon the plan found to answer so well in the Peninsular and Oriental Steam Company's Navigation, and the preparation of coke for the use of the Indian railways &c. will engage the attention of the Company.

The deep interest which the Government of India, the various Indian Railway Companies, the Indian Steam Navigation Company, the Peninsular and Oriental Steam Company, and the private Calcutta owners, must naturally have in the success of this scheme, promises to the proprietors an amount of support not usually commanded by Public Companies.

It is proposed to make arrangements with the Company in the manner adopted by the Peninsular and Oriental Steam Company, and the various Indian Railway Companies, that is, by a Board of Direction in London, and an Agency and Superintendents in India.

The operations of the Company will be immediate.

Application for Shares in the following form will be received by the Secretary and the Brokers of the Company.

To the Directors of the East India Coal Company, "Limited."

Gentlemen,—I request you to allot me shares in the East India Coal Company upon the terms of your prospectus, and I agree to accept the same, or such lesser number as may be allotted to me, and to pay the deposit thereon at the time and place mentioned in the letter of allotment, and that such deposit may be expended in defraying the preliminary expenses.

Name .....
Address and Occupation .....
Number of Shares .....

Date .....

EAST INDIA COAL COMPANY.—In consequence of the numerous applications for shares, none will be received after the 30th instant.

HENRY HAYMEN, Secretary.

Sept. 19th, 1855.

LOANS from 25l. to 1,000l. upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding fifty months. Offered by the PERMANENT BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be had on application at the British Mutual Life Offices, 17, New Bridge-street, Blackfriars. Rules 3d. each copy, 4s. per post.

CHARLES JAMES THICKE, Resident Secretary.

LOANS, at Five per Cent. in connection with Life Assurance, on personal security, for one, two, or three years, repayable by instalments.—ENGLISH and FOREIGN LIFE ASSURANCE OFFICE, 135, Oxford-street.

LOOKER'S PATENT TUBULAR VENTILATOR is the CHEAPEST and most ORNAMENTAL yet introduced for effectually admitting pure air without a perceptible draught. Decorated to suit any building or apartment. Patterns and prices may be obtained, and specimens seen, at the Office of Mr. J. PATMAN, Architect, 4, Serjeant's-inn, London; or on application to BENJAMIN LOOKER, jun. Patentee, Kingston-on-Thames.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXPENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

The Builder.

VOL. XIII.—No. 659.

THE best time to judge both of the beauties and imperfections of London architecture is at an early hour of a bright midsummer morning, before the milk and watercresses have come about. Before London has *got up*, the air is to a wonder clear, the trees in the squares look bright and cheerful, and almost the only sounds heard are the chirruping of the sparrows and the challenging and reply of many a chanticleer from yards, cellars, and mysterious places.

At this quiet hour the appearance of the streets would surprise most of those who have not seen them except during the hurried traffic of the day or the drive, glare, and bustle of the night. The great thoroughfares, such as Regent-street, Oxford-street, and Holborn, appear double their usual width, and the observer may note much, in the decorations and general style of the houses and shops, which induces feelings of mingled pain and satisfaction. The door knockers, the railings, the decorations of shops, the public buildings (the original design in many instances perverted), and other matters too numerous at present to mention, are more clearly and without interruption visible.

During such a walk, the eye, fixed on exterior objects, does not prevent the imagination from straying towards the interiors of the hundreds of dwellings which in our journey we review, with the fittings, furniture, and works of art that exhibit the various degrees of domestic taste and comfort. Although not possessed of second sight, an opinion may often be formed as to the interior arrangements by the outward mask,—the door-knocker, the window-blinds, or the carefully-arranged plants. The house we are now in front of tells of an owner of square and precise cut—practical and useful, as he thinks—who likes his coat of finest broad cloth and of the old shape, and will have his furniture substantial.—"Useful, sir,—something which will last out both your time and mine. I don't care about the shape of the chair: I know this, that many a comfortable hour I have sat in it. What odds about the table's legs? who looks at them when there is a good spread on the top of it? Pictures, sir? I read the other day in the papers that some sold for 1,000*l.* each. Do you think I would be such a fool as to hang 1,000*l.* on that wall? Not likely. I know where I could put the money," &c. This gentleman's house, however, is less objectionable than that which now intrudes itself upon our notice. The flower-pots in the window are gaudily coloured and gilt. In this house we shall find old and modern masters, from Germany and Birmingham; blue rooms with green carpets; lions, lambs, and ripe fruit on the hearth-rugs; furniture of the Elizabethan, Greek, and unknown styles, grouped together, and a hundred other incongruities that we will not pain the reader by mentioning, but will rather dispose of our present space by directing attention to a few thoughts called forth by the walk.

True and pure art and true and pure taste are not the result of accident. The former alike in architecture, painting, sculpture, and the more humble walks of art, is the result of certain and established principles, which, when rightly carried out, appeal in a greater or less degree to minds cultivated and ignorant. We have noted the ploughboy, the untaught countrywoman, the hard-handed mechanic (unfortunately not taught beyond the mere mechanism of his craft), and others of similar class, all impressed, beyond the power of description, by the works of the great masters of painting. The noble works of Michelangelo, the unrivalled churches of the Gothic age, impress (though in different degrees) both prince and peasant.

Though all may be taught to admire what is really good when it is placed before them, few have a sufficient knowledge of the principles of art to discriminate amongst the multitude of examples which have almost overwhelmed us, the result of many years of barbarous taste, during which the stream of art has flowed in a wrong channel.

To educate the masses not only in general knowledge, but also in art and taste, is a necessary measure of the present day, for the progress of science is daily making man less dependent on mere physical strength; and it, therefore, becomes us to get rid as rapidly as possible of all objects in our houses which may familiarize the eyes of the young with what is bad and assist in perpetuating the taste of which we complain.

But for the demand which the large extent of ignorance in taste and art has made for manufactures and decorations of a debased description, it would cost as little to have the houses of both the middle and higher classes fitted in beauty, comfort, and harmony, as with the former;—a consideration of greater value to both old and young than is generally supposed; and even in the present state of affairs, the price of the bad is in many cases more than the cost of the good.

Let us look into a residence where the eye will not be offended.

Overlooking the Green-park, there is a house which not only contains a choice collection of works of art, but is also in other ways rendered so remarkable by the good taste of its venerable and distinguished owner, that some account of it cannot fail to be useful to our readers.

The exterior, without having much pretension, has a fit and comfortable appearance; near the top is an open verandah, in which are plants and vases; the long garden in front is in winter thickly planted with laurels and other evergreens, and in the summer is gaily decked with seasonable flowers. In this house, during three generations, Samuel Rogers, the gifted author of the "Pleasures of Memory," has gathered round him the most celebrated statesmen, poets, painters, sculptors, and those who in science or in other ways were honourably distinguished.

Within the hospitable walls of the poet have met Fox, Grattan, and the men of that age; Sir Walter Scott, Lord Byron, Chantrey, Stothard, Flaxman, Wilkie, and poor Haydon, and a host of bright luminaries of what may be considered the last generation. To mention those of the present day who have enjoyed the friendship of Mr. Rogers, might seem impertinent. A house so eminently connected by association with the great in literature, art, and science, would, independently of other considerations, be a place of general interest; but in addition to this claim upon our attention, the taste of Mr. Rogers has produced an arrangement of furniture and decoration which satisfies most eyes.

Going into the house, not from the garden side, but from Park-place (No. 22), we find in the hall some choice Greek and other sculptures, busts and vases of large size; and we enter the dining-room which overlooks the park. This room, wherein so many noted persons have met together, is of a considerable length, and is lighted by a bow window which occupies the whole of one end; the curtains are of a dull red colour—in the summer, interwined with thinner drapery of white, the trees and park seen pleasantly through; near the window on one side of the room is a fine head by Rembrandt; on the other side, the famous head of Christ crowned with thorns, by Guido, which has been often engraved; other portions of the walls are covered with choice examples of the works of Rubens, painters of the Italian and Spanish schools, and some of the best of Sir Joshua Reynolds's pictures; for instance, the Strawberry Girl, and Puck—that wonderful personification of frolic and mischief. In the bay of the window is a mahogany pedestal, ornamented with a Grecian scroll, and carrying an exquisite vase; it is, however, to the carving on the stand that we would particularly refer. One day, when Chantrey, the sculptor, had reached the height of his fame, and was paying a visit to Mr. Rogers, he said, laying his hand on the pedestal, "Sir, do you remember a journeyman carver waiting some years ago in this room to receive your instructions respecting this identical stand, and the sideboard at the further end of the room? I was that workman, then a journeyman receiving 30*s.* per week." On the sideboard to which Chantrey alluded is the original model of the bust of Pope, by Roubiliac. Sir Robert Peel has the marble, which lacks much of the character and expression of the model. In other parts of the room Etruscan and other vases are disposed. The walls are of a rich crimson, subdued as that colour would be in oil-painting, with a glazing of asphaltum; the carpet is of a very deep brown crimson hue, mixed with grey—varying, however, from both the walls and curtains. The cornice of the room is much ornamented—partly gilt; the leather coverings of the seats harmonize, yet produce variety of colour, which is enhanced by the "Vandyke brown" of the furniture.

We step up-stairs, glancing at portions of Greek architecture, into the library,—a square-looking apartment, lined with book-shelves on all sides except above the mantel-piece, where hangs a fine picture by Reynolds. On the wirework are original drawings by Raffaelle, Turner's drawing of Stonehenge in a Thunderstorm,—the wild sky, lightning, the stricken sheep and shepherd, the bereft lamb and howling dog, harmonising well with that startling effort of man's handiwork. There are also other cabinet pictures which we must pass over, except one of a lazy-looking small boy, plodding on unwillingly to school, and beguiling the way by catching a fly on the sunny side of the wall. Inside the cases are hundreds of books, many of them presents from the authors to the poet. The furniture in this room—couches, seats, table, library, ladder,—are all of fine forms. On the top of the bookcases is a variety of Etruscan vases. The working patterns of the ceiling were supplied by Flaxman, who also designed and executed the sculpture on the mantel-piece, which is well worthy of study.

An eminent German poet, writing to a brother bard in this country, said, "Send me a drawing of your favourite mantel-piece, as it is decorated, and it will enable me to become better acquainted with you than I could by reading many sheets of correspondence." The truth of the remark is strengthened by an examination of that in Mr. Rogers's library, which is covered with rare and curious objects; in fact, look where you will, the place is crowded with matters of interest,—presents of great price, and other things, although less costly, which by association are more valuable than gold. Leaving the library we pass through a vestibule, containing works of art, to the drawing-room, in which there is a glorious display of fine pictures of different schools. It is, however, to our present purpose to look upon these rather as so much of the garnishing of the room, than to enter critically into their merits; suffice it that the walls are nearly covered with works of art of the highest character. Near the door is a cabinet of light-coloured wood, in the panels of

which is the first painting of Stothard's "Canterbury Pilgrims," with his "Garden of Boccaccio," and other designs. The effect is excellent, and causes us to feel regret that the application of art to similar purposes is not at present more generally sought. The mantel-piece in this room is of white marble, and, like that in the library, by Flaxman. This is another instance of pure art being applied to domestic purposes. Why should this not be more general in the houses of the wealthy? This exquisite work is also surmounted by vases and statuettes of value; and underneath a careful glazing are several orange blossoms, pearls, and other bride's favours, which, in a mysterious manner, harmonize with the rare works of bygone generations with which they are surrounded, and touch the feelings. We pass over several objects which add to the general effect, and observe that, taking the apartments both separately and as a whole, they present an appearance of splendour without gaudiness, of richness and harmony, which is caused in the first instance, by the absence of all objectionable objects, for the eye wanders now in vain to find anything which good taste would remove; and, secondly, the colouring is skilfully arranged for throwing out the objects of greatest value: the rich colour of the walls, curtains, and carpets, which form, as it were, the key of the picture, and render objects which would be too bright under other circumstances, harmonious and accessory. The carpet of the drawing room has no positive pattern, and is of the deep and varied hue of some of our ancient glass windows. Look where you will, the eye rests on pleasant objects, and is coaxed from place to place, as it is by the skilful painter, who, by the cunning of his art, leads us from his bright light and colour into his deep yet transparent shadows.

THE RECENT HISTORY OF ARCHITECTURE.*

WORKS OF HENRY HOLLAND, JAMES WYATT, AND OTHERS.

That Holland, as an architect, was superior to the bad taste which may be found in portions even of Carlton House, for which he should hardly be chargeable, is, to our mind, supported by the evidence of the merit which there is in the portico and screen-wall of Melbourne House. Of course salient columns—even there supporting the well-designed vases—are also open to objection; but the general design, though on a very small scale, is equalled by few architectural compositions in the metropolis. It is at all events worth preserving; and should the extension of government offices require the building to be removed, it should be erected in some other place. It would be well if the plan of removal were adopted in all similar cases. Many architectural fragments have been lost which would have been as deserving of preservation as those of Inigo Jones's works, which Burlington gathered together at Chiswick; and the parks would be much improved by such accessories. We hope the suggestion will be taken in case of alterations at Burlington House. The circular colonnade there is really so fine a work of art, that we will not believe, that under any circumstances, it will be taken away; but the brick wall is an eyesore in Piccadilly, and the main entrance gateway would be more effective in itself, and more serviceable as an accessory on a different site. We have ascribed Melbourne House to Holland, though Mr. Cunningham gives it to Payne. Mr. Timbs's statement that the body of the house was by Payne, and that the portico and front, with the circular entrance-hall, were added by Holland, is, however, more likely to be correct: the front here, and that of Carlton House, were obviously from the same hand. The house was at one time the residence of the Duke of York, and was then called York House. The residence of the Prince of Wales being distinguished for the screen of columns we have mentioned, and York House for the circular entrance-hall, the circumstances gave rise to a witticism which is told by Southey in "Espriella's Letters." The buildings being described to Lord North after he had become blind, in the latter part of his life, he remarked, "Then the Duke of York, it should seem, has been sent to the Round House, and the Prince of Wales is put in the pillory."

The interior of Covent Garden Theatre, judging from the view in Wilkinson's book, would not claim particular description. The doorway from the arcade of Covent Garden was of good character, arched, with coved jambs and rusticated Ionic columns. The India House, erected in 1799 and 1800, and now proved by our correspondent of last week, to be as we supposed, from the design of Holland, deserves notice for the recessed portico, as better contrived in that respect than were many of the later attempts. The internal arrangement, doubtless by Jupp, with later alterations, is very bad; but portions, if suitably decorated, would be effective. The small entrance-hall has some merits, which procured for it particular notice in the late Mr. Bartholomew's work on "Practical Architecture." These are chiefly about the space between the order and the ceiling; where the bracketing out for support of the latter, and the combination of semicircular windows and sections of spheres, are cleverly managed. That the gain from the study of the Greek models was accompanied by some loss, is shown by the elaborate character, comparatively speaking, which was attempted in the decoration of the portico. Sculpture in the tympanum, and figures on the acroteria of the pediment were not omitted, and although the treatment by the younger Bacon was hardly equal to what the abilities of the same artist might have achieved, and may indeed have helped towards a recent prejudice against all allegory, the architect deserves credit for the introduction of what is always desirable, but what was neglected in structures put forth as on the very model of the Grecian buildings, up to the time of St. George's Hall and the Royal Exchange.

As we hold that there is much to be learned from the history of error in architecture, the biography of James Wyatt, who received a large amount of patronage, should be an instructive one. The materials, however, which we find close at hand, are scanty. Most of his works, enumerated in Mrs. Cresy's edition of "Milizia's Lives," are in the provinces. His most celebrated London work was the Pantheon, in Oxford-street, since remodelled by Mr. Sydney Smirke. The interior seems to have been the portion of the building which had most pretension. It was fitted up as a theatre, with several tiers of boxes.

Although Wyatt appears to have carried out, in great measure, his own views, with employers like the late Mr. Beckford—who have attained some celebrity, though perhaps with little reason, in matters of taste—he also was one of the first to introduce into the profession that practice of attempting every sort of style, and yielding all individuality to passing whims of others, which has tended so much to substitute mercantile spirit for artist-feeling. Whilst nearly every architect that has become celebrated has left works noticeable for some one good quality or other, it is hard to say where was the peculiar merit of James Wyatt. In Italian architecture his works were puny in effort; in Gothic, he was generally a bungler; in "restoring" at the cathedrals and Oxford Colleges, he destroyed. Simplicity and elegance were thought to be characteristics of his designs, —mainly, as it would appear, because there was little in them. The few particulars which are given by Mrs. Cresy, show that he had, at a very early age, some considerable advantages. He was born in 1746, and it would seem that about 1760, or, at the age of fourteen, he was taken to Rome by Lord Bagot, that he there measured the buildings, and that afterwards he was for two years at Venice, the pupil of Viscentini, an architect and painter. About the year 1766 he returned to London. His first work, the Pantheon, brought him many works on private residences in England, Ireland, and Scotland. He was patronized by Horace Walpole. He lived till the year 1813, being in the meanwhile appointed surveyor to the Board of Works,—that is, on the death of Sir William Chambers in 1796. Thus, besides Henry Holland, he had for contemporaries, men of some note,—viz. James Gibbs, Sir Robert Taylor, Stuart, the Adams, Sir William Chambers, the younger Dance, Mylne the architect of Blackfriars-bridge, Vardy, and Sir John Soane. We are induced to offer such particulars, because they may afford means of judging of the nature of those co-operative influences which were bringing about the state of art at the time in which we are writing. Besides the names we have given, Burlington and indeed Kent, were living during a few years of Wyatt's youth, and Sir Robert Smirke had begun his practice before the same architect's death. Another architect was the father of the present Mr. Hardwick, sen. He conducted the restoration of St. Paul's Church, Covent Garden, which had been destroyed by fire in 1795. Soane outlived the chief of the contemporaries of Wyatt. The Italians of most importance in Wyatt's time, were, perhaps, Quarenghi, who was born in 1744, and died in 1817; and Vanvitelli, the architect of the Caserta Palace at Naples, who seems to have been employed in all parts of Italy. From the works of the Italians we have mentioned, it is evident that the style of architecture in which it became characteristic to dispense with architectural members such as the dressings of windows, was by no means confined to England. In the Russian buildings by Italian architects, columns and pilasters are employed, whilst there are mere holes for light. It seems to have been assumed that everything but the orders—that is to say, the chief requisites in the structure—were so many unfortunate contingencies,—unavoidable of course—but which were only to be kept out of sight as much as possible. The study of the Greek orders did not afford much in place of thought as regards these requisites: though even those examples of decoration of apertures which may be found, were quite sufficient to point to a principle of treatment very different from that which was allowed to prevail. But it remained for quite recent years, aided by the comprehension of the *true* principles of Gothic architecture, to teach the lesson, without which every effort in our art must fail of success,—namely, that the structure and its requirements must be countenanced in the art-exercise—by no means held antagonistic to it; that without this, neither common-sense satisfaction, nor the higher emotion from art will be reached, and that these requisites are the very opportunities offered to the true artist,—are with him the starting points for the manifestation of the highest art. All this, however, during many years, was not felt by architects of the Palladian and Greek schools in many parts of Europe. Sir John Soane, it must be admitted, avoided many of the mistakes that were made. We know not what may be due to the ancient example to which he had paid most attention; but it is worth mentioning that in the somewhat more than usually Grecian example of Roman architecture, the temple at Tivoli, there is one other of the very few windows which the classical models afford; and the apertures and recesses in our modern architect's buildings, have usually some kind of dressing. In England, spite of the precedent of Vanbrugh's works, not to mention the admirable examples in Tudor architecture, it was long a popular belief that the chimney was a thing which by no possible effort could be made ornamental. Enough, that fact, to show what is lost by *disregard* of precedent and example. But the common houses of the time of George III. if they did not attempt much, at least did often not offend by discord of parts, whilst sometimes they approached to dignity of proportion. The idea of window-dressing, as shown by the use of red bricks, was not soon got rid of. But Wyatt, and indeed Nash after him, contributed to introduce, in really important buildings, a manner which contradicted all the effect which might have been produced from the study of the Greek orders. The columns and the window apertures were in constant disunion. Whilst Wyatt used windows without dressings, he would introduce unmeaning panels, sometimes oval in shape. The blankness of the panels was diversified with that *effete* effort of a style, the piece of suspended drapery. There was not much

* See p. 421, ante.

hope, it must be confessed, from perseverance which led to no better results. Wyatt, however, entered into the experimentalism which was growing up. Amongst his works are enumerated the new Military Academy at Woolwich-common, the Palace at Kew, Lee Priory, Kent, Fonthill Abbey, Hanworth Church, works at the House of Lords, and at Windsor Castle, also at Bulstrode, Doddington, and Cashiobury. Castle Coote, the seat of Viscount Belmore, in Ireland, is spoken of as after a Greek model, and as deserving of commendation for "grandeur of effect and judicious arrangement." A seat at Bowden-park, Wiltshire, for Barnard Dickenson, esq. is in the same style; whilst "a castle" at Ashridge, Herts, for Lord Bridgewater, is "a very extensive and splendid mansion," the chapel being "highly decorated and in imitation of the florid architecture practised in the Middle Ages." In Oxford, at Oriel College, he placed a discordant Ionic screen; and to Canterbury Court, what was described as "a beautiful Doric gateway," though "with columns which appeared too slender when compared with the Greek." At Oxford he was also employed at the colleges of Balliol, Merton, Magdalene, and All Souls', and in 1789 he commenced the restoration of New College Chapel. His works at the cathedrals were of a very important nature. He rebuilt the nave at Hereford, without the slightest regard to the character of the original structure. The beautiful Norman chapter-house at Durham was, in effect, destroyed under his hands. His achievements did not escape repeated protests by Gough, Englefield, Carter, and others, in the "Gentleman's Magazine," from 1792 to 1810, and by the late Thomas Hope, in a pamphlet, in 1804. His additions at St. Stephen's Chapel, and Windsor, were flimsy in design, and structurally bad. At Salisbury, and at Lichfield, he lengthened the choir by removing the altar screen, thus bringing in the space of the Lady Chapel. At the place last mentioned, that very respectable mouthpiece of opinions, the verger, some ten years ago, represented how that the measure had tended to the effect of the interior. We think the opinion open to discussion. For the effect that is gained, something is lost. Greater effect of distance results from the view over the top of the screen, than is gained by the present marked termination to the vista. In this respect our idea seems to be founded on the same arguments as those which, if we recollect rightly, once led a learned professor to approve of the modern addition of the organ to the rood-screen,—although that particular innovation, we believe to be obstructive of the view, rather than conducive to the effect of length. But we notice the question now, for the sake of remarking upon the change which has taken place in regard to subjects of this nature. Formerly the question was discussed simply "as one of taste;" latterly, the majority of opinions has been against the innovation by Wyatt, not on the score of taste, so much as that of the necessity of preserving every original arrangement. With the latter view, indeed, there is reason to agree, without our being open to the charge of superstition, or slavery to precedent, or other charges which some writers, perhaps excusably, bring against all who take the line of argument to which we refer. There is a special value in buildings as *models*, which would seem to be impaired where alterations are admitted; and where such alterations are made, the chance is, that through the impossibility of grasping the chain of reasoning which originally led to a particular arrangement, some really important element of the effect is lost. It is, however, also important to notice that in this pre-archæological and pre-ecclesiological period of James Wyatt, architects ventured upon efforts which, if not quite successful, were perhaps more consistent with the vocation of the artist than those to which the architect of this day is confined. We could point to works of Wyatt's time, or a few years later, which in their novelty of plan or effect, if not their beauty, had qualities of excellence from which architects now are debarred by the positive terrorism which they are under. What the works of the former lacked, resulted from that defective knowledge of models which we say can never be dispensed with, without disadvantage. It can be hardly necessary now to show, that it is not in human power to carry invention and originality to the length of producing what is absolutely and wholly new. It is wise, as it is necessary, for the artist, that he should know what has been done by others. It is so, not only that he may *avoid* doing the exact thing that has been done before—the identity of discovery or opinion which it is singular to note is ever occurring amongst thoughtful minds impressed with circumstances common to the occasion or the time—but it is requisite and politic, in order that he may not take his limitation, in place of the effect to which the invention has been developed by others. Thus in the Gothic of James Wyatt's time, we are constantly offended by details, such as suggest inferiority,—the feeling involving inevitably dissatisfaction with the work, as one of ART. We at once see that the architect could not possibly have perpetuated such a form as this or that, if he had only known how much better was the form used by the old architects—whose works are familiar now. But whilst *these* works are familiar to *us*, we say they have not been used as *models;* and whilst *our* Gothic architects may find much to question in the unlearned efforts of the Wyatt school, we fear true artists must lament that, for some exceptional reason or other, much learning now has not borne its proper fruit.*

THE CHEMISTRY OF BUILDING MATERIALS.†

The second great disintegrating agent is oxygen. To make this part of the subject clear, we should need a lecture on the atmosphere. This oxygen is continually acting on many of the ingredients of our stones, continually wearing those down, and in many cases, changing them to metallic oxides and then to salts. Every one of those massive pieces of whinstone, if looked at through the microscope, shows dull black grains of metallic iron. They are disseminated through the whole mass, and when exposed to the air, they rust, as iron of any other kind will do: in rusting, they get a brown colour, which a piece of exposed trap or whinstone sooner or later in most cases acquires; and as each little particle of iron becomes changed, and the little fragments or particles of oxide of iron occupy a larger space than the iron did before, they swell out the adjoining portions of the stone, crack it, and mechanically alter it. Moreover, this oxide of iron is readily washed away, and leaves a cavity, in which water can dissolve what is soluble in the mass. The most remarkable example of atmospheric agency, where oxygen is the cause of change, is presented by what we call iron pyrites—a source of great trouble to builders. Iron pyrites is composed of sulphuret of iron, and occurs in two quite unlike shapes. One of them we call slate diamond. It appears in brassy cubical crystals—the beautiful surface remaining, in roofing slates, for an indefinite period unchanged. Iron pyrites also occurs in a different crystalline form, which, so soon as exposed to the air, begins to absorb oxygen. The iron turns to oxide of iron, and the sulphur to sulphuric acid; these yield sulphuric acid and green sulphate of iron—a substance quite soluble in water, and which by and by, from the further absorption of oxygen, changes to a brown body. This body is the great cause of the spotting of many sandstones. We have in them sulphuret of iron deep down. That sulphuret has a colour like brass: but when you bring the sandstone to the surface, and allow air to enter the pores, the sulphuret of iron begins to oxidise into sulphate of iron. It is brought to the surface by water, is changed to oxide of iron, and there is no cure for the mischief. Then sulphuret of iron not only stains the stones, but of course splits them up.‡ It does not occur largely in any of our stones; but I refer to it in illustration of oxidation as altering the composition of the mass. Alum-slate, which contains pyrites, looks, when dug up, like a book bound and half compressed together; but after you expose it to the air for some time, it opens out like a fan, or as if the paper leaves of the book had had a multitude of little wedges put in, and the whole expanded. The action of oxygen in this way is extremely powerful, so that it must be regarded as one of the destructive agents that must be kept specially in view in selecting stones.

The other atmospheric agencies are more obscure in their action, and I shall only name them. They are—nitric acid, developed in the atmosphere by every lightning flash, and found in rain water; ammonia; and a curious body named ozone, an agent rivalling chlorine in its singular effects on other bodies, and which, there can be no question, must act even more energetically than oxygen, on such bodies as it encounters. We may add to these sulphurous acid, as the coals, and even the coal-gas we burn, is always yielding a certain portion of sulphurous acid. The whole of these agents are much more efficacious when combined with rain or water than when dry. We all know that in the climate of Egypt, the ancient temples remain scarcely changed; and as they are built of sandstone, granite or syenite, basalt, limestone (of which the pyramids are built), and other materials, it is impossible to attribute their durability to the mere quality of the stone. On the painted walls of Egyptian buildings, even vegetable and animal colouring matters remain nearly as bright as they showed three thousand years ago—a permanence not attributable to the ingenuity of the Egyptians in selecting enduring substances. It is owing to the dryness of their climate that their buildings have so long subsisted; and this is a remarkable example of the different principles on which a builder, in a climate like this, should proceed, from those on which a builder might act in Egypt, where rain seldom occurs.

5th. As to the pleasing colour, I need not say much about it. Merely for utilitarian ends we do not require the colour of a stone to be thought of; but this society is largely æsthetical as well as practical, and will therefore, I presume, look on colour as a very important element in the execution of their designs. For example, whinstone is almost too dark to be welcome in a climate so sombre as this. Many of our red sandstones are also, to my eye, very disagreeable. They are of an uncertain dull red, some very dark, and none of them coming up to the colour of red brick. Our red trap is something the same. Among sandstones and limestones we have a choice of pleasing colours. The Craigleith stone is white, but not so pleasing as the fuller-tinted Redhall or the Binny. I like the buff colour of the stone used in the Houses of Parliament. A buff, a brownish-yellow, or a pinkish-yellow, are the colours most generally liked—I infer as much at least from the fact, that it is to such tints, especially to the two first-named, that the term stone-colour is generally applied.
